T319

Date: _____

Test Questions:

1. Compressed gas cylinders are like "sleeping giants" because:
 - A. They are big.
 - B. They look harmless, but can do great harm if mishandled.
 - C. They are ugly.
 - D. All of the above.

2. Compressed gas cylinders can be hazardous because:
 - A. Their contents may be flammable, toxic, corrosive, or poisonous.
 - B. They can be an electrical hazard.
 - C. They can become dangerous projectiles if mishandled.
 - D. Both A and C.

3. When moving compressed gas cylinders, it is best to :
 - A. Drag them.
 - B. Roll them.
 - C. Use a cart or truck.
 - D. Slide them.

4. When using compressed gas cylinders, it is best to :
 - A. Place cylinders in an upright position, secured with a suitable cylinder truck, chain, or other steadying device.
 - B. Lay cylinders on the floor.
 - C. Hold the cylinders so they won't fall over.
 - D. None of the above: it doesn't matter how you place cylinders when using them.

5. To ensure safety, it's important to avoid:
 - A. Placing cylinders near sparks, flames, or electrical circuits.
 - B. Placing cylinders where objects may strike or fall on them, or close to combustible materials.
 - C. Using oil and grease on cylinder valves and fittings.
 - D. All of the above.
