

Many people take a "Re-active" approach to safety which is like "closing the barn door once it's already too late." By adopting a Pro-active approach to safety, you take charge of your own destiny. You hunt down accidents waiting to happen and prevent them. You find the safety practical way to work. This video offers a step-by-step program for getting started with Pro-active Safety. It is a perfect compliment to any program of Total Quality Management - or Total Safety Management.

Tone: Actuality

Key Training Points:

- The axiom of TQM is: "find the best way to do it, and prevent break downs." The same principle is behind "T.S.M." or Total Safety Management
- For a Pro-active safety program to work effectively, it takes cooperation from all levels of the company
- The second step of a Pro-active safety plan is to look for the safest practical ways to work. Conduct a job hazard analysis and a critical safety audit of your operation
- The simple basis of Pro-active safety is to find "accidents waiting to happen," and prevent them from happening
- Accidents and injuries can also be prevented by auditing housekeeping, ensuring compliance with OSHA and company safety procedures and looking for unsafe acts and conditions
- Familiarize yourself with the procedure for addressing safety concerns
