

Falls are the second most common cause of on the job injuries, second only to back strains. They are also the second leading cause of fatalities, after vehicle mishaps. (1) Nearly all slips and falls - and their associated injuries and expenses can be avoided with proper housekeeping, awareness and preventive measures. This refreshing video follows the world's most accident prone travel expert around the world as we learn about "Trips to The Great Indoors"

Tone: Drama

Key Training Points:

- Up to age 79, falls cause more fatalities than anything other than traffic accidents. After age 79, falls are the number one cause of fatal injuries
- You can prevent falls by watching out for spills, food, grease or oil spots, and even dust
- Floor dust can be very slippery
- Keeping the area free of slipping and tripping hazards is the way to prevent injuries and deaths from slips and falls
- Keep extension cords out of high traffic areas, and tape them to the floor when they must cross potential traffic areas
- When unexpected obstacles combine with visibility problems, falls are bound to happen, so clear a path or ask for guidance if you will be walking while your vision is obscured
- Uneven floors or other walking surfaces cause trips and falls
