Total returns are historical and include change in share value and reinvestment of dividends and capital gains, if any. Cumulative total returns are reported as of the period indicated. Life of Fund figures are reported as of the inception date to the period indicated. These figures do not include the effect of sales charges, if any, as these charges are waived for contributions made through your company's employee benefit plans. If sales charges were included, returns would have been lower.

Indices are unmanaged and you cannot invest directly in an index.

Morningstar, Inc., provided data on the non-Fidelity mutual funds. Although the data is gathered from reliable sources, accuracy and completeness cannot be guaranteed by Morningstar.

The Morningstar Category Average is the average return for the peer group based on the returns of each individual fund within the group, for the period shown. This average assumes reinvestment of dividends and capital gains, if any, and excludes sales charges.

% Rank in Category is the fund's total-return percentile rank relative to all funds that have the same Morningstar Category. The highest (or most favorable) percentile rank is one and the lowest (or least favorable) percentile rank is 100. The top-performing fund in a category will always receive a rank of one. The number in parentheses represents the number of funds in the category. % Rank in Category is based on total returns, which include reinvested dividends and capital gains, if any, and exclude sales charges.

With the exception of domestic equity mutual funds, investment options have been assigned to investment categories based on Fidelity's analysis. Fidelity has verified the accuracy of the placement of certain third party non-mutual funds with either the plan sponsor or the plan sponsor's consultant. Within Domestic Equities, mutual funds are listed according to their actual Morningstar categories as of the date indicated. Morningstar categories are based on a fund's style as measured by its underlying portfolio holdings over the past 3 years and may change at any time. These style calculations do not represent the funds' objectives and do not predict the funds' future styles.

Templeton Growth Fund Class R6: Except for Life of Fund returns, the analysis on these pages may be based, in part, on adjusted historical returns for periods prior to the class's actual inception of 05/01/2013. These calculated returns reflect the historical performance of the oldest share class of the fund, with an inception date of 11/29/1954, adjusted to reflect the fees and expenses of this share class (when this share class's fees and expenses are higher.) Please refer to a fund's prospectus for information regarding fees and expenses. These adjusted historical returns are not actual returns. Calculation methodologies utilized by Morningstar may differ from those applied by other entities, including the fund itself.

Expense Ratio Footnotes

Expense Ratio after Reduction is the total annual operating expense from the fund's most recent prospectus after any fee waiver and/or expense reimbursements that will reduce any fund operating expenses for no less than one year from the effective date of the fund's registration statement. This number does not include any fee waiver arrangement or expense reimbursement that may be terminated without agreement of the fund's board of trustees during the one-year period.

Fidelity Freedom K[®] 2005 Fund, Fidelity Freedom K[®] 2010 Fund, Fidelity Freedom K[®] 2015 Fund, Fidelity Freedom K[®] 2020 Fund, Fidelity Freedom K[®] 2025 Fund, Fidelity Freedom K[®] 2030 Fund, Fidelity Freedom K[®] 2035 Fund, Fidelity Freedom K[®] 2040 Fund, Fidelity Freedom K[®] 2045 Fund, Fidelity Freedom K[®] 2050 Fund, Fidelity Freedom K[®] 2055 Fund, Fidelity Freedom K[®] 2060 Fund, Fidelity Freedom K[®] Income Fund: Expense Ratio is the total annual fund or class operating expense ratio from the fund's most recent prospectus (before waivers or reimbursements). For Fidelity Fund of Funds, this ratio reflects both the total operating expense ratio of the fund and of the underlying funds in which it was invested.

Mellon Stable Value Fund Class M: Where the investment option is not a mutual fund, the figure displayed may have been calculated using methodologies that differ from those used for mutual funds. For non-mutual fund investment options, the information has been provided by the trustee or plan sponsor. When no ratio is shown for these options it is due to the fact that none was available. Nevertheless, there may be fees and expenses associated with the investment option.

Morningstar Category Expense Ratio: This figure represents average net expense ratio paid by the funds in the Morningstar category. The information is based on the net expense ratio as reported in each fund's most current prospectus and is provided by Morningstar.

Investment Risk

Lower-quality debt securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer.

Investments in mid-sized companies may involve greater risk than those of larger, more well known companies, but may be less volatile than investments in smaller companies.

Investments in smaller companies may involve greater risk than those in larger, more well known companies.

Foreign investments, especially those in emerging markets, involve greater risk and may offer greater potential returns than U.S. investments. This risk includes political and economic uncertainties of foreign countries, as well as the risk of currency fluctuation.

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market or economic developments.

In general the bond market is volatile and bonds entail interest rate risk (as interest rates rise bond prices usually fall and vice versa). This effect is usually pronounced for longer-term securities. Bonds also entail the risk of issuer default, issuer credit risk and inflation risk.

Fidelity Freedom Funds are designed for investors expecting to retire around the year indicated in each fund's name. Except for the Freedom Income Fund, the funds' asset allocation strategy becomes increasingly conservative as it approaches the target date and beyond. Ultimately, they are expected to merge with the Freedom Income Fund. The investment risks of each Fidelity Freedom Fund change over time as its asset allocation changes. They are subject to the volatility of the financial markets, including equity and fixed income investments in the U.S. and abroad and may be subject to risks associated with investing in high yield, small cap and, commodity-related, foreign securities. Principal invested is not guaranteed at any time, including at or after their target dates.

Fid Puritan Composite Idx: Fidelity Puritan Composite Index is a hypothetical representation of the performance of the fund's general investment categories using a weighting of 60% equity and 40% bond. The following indexes are used to calculate the composite index: equity - the Russell 3000 Value Index for periods prior to July 1, 2008, and the Standard & Poor's 500 Index (S&P 500[®]) beginning July 1, 2008, and bond - the Barclays[®] U.S. Aggregate Index. The index weightings of the composite index are rebalanced monthly.

MSCI AC World (N): The MSCI ACWI Index (Net) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI consists of 45 country indices comprising 24 developed and 21 emerging market country indices. It is not possible to invest directly in the index. Performance data shown for the index is net of dividend tax withholding.

MSCI World (N): The MSCI World Index (Net) is an unmanaged market capitalization-weighted index that is designed to represent the performance of developed stock markets throughout the world and assumes the highest possible withholding taxes are applicable.

Russell Midcap Growth: The Russell Midcap[®] Growth Index is an unmanaged market capitalization-weighted index of medium-capitalization growth-oriented stocks of U.S. domiciled companies that are included in the Russell Midcap Index. Growth-oriented stocks tend to have higher price-to-book ratios and higher forecasted growth values.

The Morningstar Rating brings load-adjustments, performance (returns) and risk together into one evaluation. To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve. If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5% it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three, five-, and 10-year
