# Sign-off Sheet and Signatures of Environmental Professionals

This document entitled Phase I Environmental Site Assessment was prepared by Stantec Consulting Services Inc. ("Stantec") for the account of the City of Fresno (the "Client"). Any reliance on this document by any third party is strictly prohibited. The material in it reflects Stantec's professional judgment in light of the scope, schedule and other limitations stated in the document and in the contract between Stantec and the Client. The opinions in the document are based on conditions and information existing at the time the document was published and do not take into account any subsequent changes. In preparing the document, Stantec did not verify information supplied to it by others. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Stantec shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## 1.0 EXECUTIVE SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of a 0.54-acre parcel located at the west corner of H Street and Mono Street, with current associated addresses of 735, 739, and 741 H Street in the downtown area of the City of Fresno, Fresno County, California (the “Subject Property”). The Phase I ESA was conducted on behalf of the City of Fresno (Stantec’s client and the current owner), designated as the “User” of this report. The work was performed in accordance with the Consultant Services Agreement between Stantec and Client dated December 14, 2018, and amended on June 10, 2021.

The Phase I ESA is being funded through a Fiscal Year 2019 United States Environmental Protection Agency (EPA) Brownfields Coalition Assessment Grant awarded to the City/Client/User, and work is subject to federal and EPA requirements specified in the Cooperative Agreement (Grant No. 99T91201), including requirements specific to performance of Phase I ESAs. Eligibility of the Subject Property for use of EPA hazardous substance grant funding was approved by EPA on May 26, 2022. The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designation E1527-21 and E1527-13, and All Appropriate Inquiry (AAI) as defined by the EPA in Title 40 of the Code of Federal Regulations (CFR), Part 312, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The parcel forming the Subject Property is identified by the Fresno County Assessor’s Office as Assessor Parcel Number (APN) 467-040-23. The Subject Property is nearly fully occupied by a 50-foot by 400-foot one-story vacant warehouse building formerly used for commercial purposes. The building was historically divided into four areas (referenced within this report as Areas A-D), which had separate assigned addresses, historical uses, and occupants. The surrounding areas are comprised of vacant commercial structures, parking lots, retail, the Chukchansi Park baseball stadium, and a railroad right-of-way. A Subject Property location map is provided as **Figure 1**, and a map illustrating the Subject Property and vicinity is provided as **Figure 2**. The documented historic uses for each area of the building are summarized on **Table 1**. Photographs taken during the site reconnaissance visit are provided in **Appendix A**.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 and E1527-13 of 735, 739, and 741 H Street, or the “Subject Property.” Any exceptions to, or deletions from, this practice are described Section 2.3 of this report. This assessment has revealed the following evidence of recognized environmental conditions (RECs) in connection with the Subject Property:

- **REC:** The historic use of Area C within the building by California Spray Chemical Corporation from 1931-1947 as a pesticide storage and distribution warehouse is considered a REC for the Subject Property. Due to the toxicity of these materials, there is potential for even minor releases (such as through cracks in the floor) to have resulted in significant releases to the environment.

In addition, the following business environmental risk (BER) and *de minimis* condition were identified in connection with the Subject Property:

Phase I Environmental Site Assessment  
735, 739, and 741 H Street, Fresno, California  
Executive Summary  
August 30, 2022

- BER: Previous studies completed in 2014 and 2022 documented significant quantities of asbestos containing materials (ACM) and lead based paint. Based on the age of the building and observations by Stantec, the building contains or is likely to contain other types of hazardous building materials and equipment, including, but not limited to polychlorinated biphenyls (PCBs) in caulk, fluorescent light ballasts, elevators and other hydraulic equipment, fire alarms, and mercury switches. These materials will be to be further assessed and appropriately managed in conjunction with future building renovation or demolition activities.
- De minimis condition: During the site reconnaissance, Stantec observed a 5-gallon bucket that had been tipped over and was leaking oil onto a concrete floor within the interior of the building.

It is recommended that additional testing be conducted for hazardous building materials and equipment both to resolve inconsistencies in the materials identified as ACM in the two previous studies, and to test for other types of materials or equipment that were not assessed previously including potential PCBs in caulk and other building materials. If the building is demolished, consideration should be given to testing soil underlying Area C of the building for impacts from pesticides, so that appropriate management measures can be performed as part of backfilling or future site reuse.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

## 2.0 INTRODUCTION

The objective of this Phase I environmental site assessment (ESA) was to perform All Appropriate Inquiries (AAI) into the past ownership and uses of the Subject Property consistent with good commercial or customary practice as outlined by ASTM International (ASTM) in “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,” Designation E1527-21 and E1527-13. “All Appropriate Inquiries” is the process for evaluating a property’s environmental conditions for the purpose of qualifying for landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions (“RECs”) of the Subject Property.

The ASTM E1527-21 standard indicates that the goal of the Phase I ESA is to identify RECs, including historical recognized environmental conditions (“HRECs”), and controlled recognized environmental conditions (“CRECs”) that may exist at a property. The term “recognized environmental conditions” means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property, including:

- 1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment;
- 2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or
- 3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment.

ASTM defines a “HREC” as a REC that has occurred in connection with a property but has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional (EP) must determine whether the past release is a REC when the current Phase I ESA is conducted (e.g., if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a “CREC” as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The presence of hazardous substances or petroleum products is, however, not a REC if that presence is a *de*

*minimis* condition. De minimis conditions are minor occurrences of contamination that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

A vapor encroachment condition (VEC) is defined in ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions as the presence or likely presence of contaminants of concern (COC) vapors in the vadose zone of the Property caused by the release of vapors from contaminated soil and/or groundwater either on or near the Subject Property. A VEC exists when there is known COC contamination in, at or on the Subject Property, such as may be the case when COC-contaminated groundwater exists in the subsurface beneath the Subject Property. A determination that a VEC does not exist is appropriate, for example, when subsurface sampling has confirmed that COCs are not present. A potential vapor encroachment condition (PVEC) exists when conditions suggest that it is possible for COCs to be present at the Subject Property, but subsurface sampling has not been performed.

The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Subject Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Subject Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Subject Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-21 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. “Reasonably ascertainable” means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

## 2.1 SUBJECT PROPERTY DESCRIPTION

The Subject Property is a 0.54-acre single parcel located at the west corner of the intersection of H Street and Mono Street, with current associated addresses of 735, 739, and 741 H Street in the downtown area of the City of Fresno, California. The parcel is identified by the Fresno County Assessor’s Office as Assessor Parcel Number (APN) 467-040-23, with reported dimensions of 59.0 feet by 400.0 feet. The Property is nearly fully occupied by a single-story elongated warehouse building with reported dimensions of 50 feet by 400 feet. A 9-foot wide concrete loading dock is present on the southwest side of the building and extends to the property boundary. This dock apparently served a railroad spur line that formerly extended along this side of the building. A 14-foot concrete loading dock is present on the northeast side of the building and appears to be within the right-of-way for H Street. Since its construction sometime between 1906 and 1918, the building has been divided into four areas, each with separate assigned

addresses, historical uses, and occupants. Area A at the southeast end of the building (at the corner of H Street and Mono Street) has dimensions of approximately 50 feet by 50 feet, is underlain by a basement, and historically has been associated with addresses of 701, 703, and 705 H Street, and 1745 Mono Street. Area B (northwest of Area A) has dimensions of approximately 50 feet by 150 feet, has no basement, and historically has been associated with addresses of 719, 733, 735, and 737 H Street. Area C (northwest of Area B) has dimensions of approximately 50 feet by 100 feet, has no basement, and historically has been associated with addresses of 739 and 741 H Street. Area D (at the northwest end of the Property) has dimensions of approximately 50 feet by 100 feet, is underlain by a basement, and historically has been associated with addresses of 739 and 741 H Street.

The Subject Property and adjacent properties to the northeast are vacant commercial structures. A Subject Property location map is provided as **Figure 1**, and a map illustrating the Property and vicinity is provided as **Figure 2**. Photographs taken during the site reconnaissance visit are provided in **Appendix A**.

## 2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

## 2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the Subject Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Stantec with respect to it.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the Subject Property's environmental condition.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by the client identified herein for any variation or extension of this project, any other project, or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures must be confirmed by the client and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Subject Property by Stantec at the time the work was conducted. Accordingly, additional studies and actions may be required. As the purpose of this report is to identify selected Subject Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment. The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Subject Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of Federal, state, provincial or local governmental agencies. Issues raised by the report should be reviewed by client legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the Subject Property subsequently change.

## 2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an EP. The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in **Appendix B**.

### 3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 and E1527-21 describe responsibilities of the User to complete certain tasks in connection with the performance of “All Appropriate Inquiries” into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information.

#### 3.1 USER QUESTIONNAIRE

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	Yes	The User Questionnaire was completed by Drew Wilson, Supervising Planner with the City of Fresno.
Environmental Liens or Activity Use Limitations	No	The User has no knowledge of any liens or activity use limitations associated with the Property.
Previous Environmental Permits or Reports Provided by User	Yes	The User provided historical environmental reports which are summarized in Section 3.2. The User also included information indicating the following:  Based on the historical reports, both asbestos containing materials (ACMs) and lead based paint (LBP) were found on the Subject Property.
Purpose of the Phase I ESA	Yes	Environmental due diligence in support of Property redevelopment.

A copy of the completed User questionnaire is provided in **Appendix C**.

#### 3.2 PREVIOUS ENVIRONMENTAL REPORTS

The User provided a historical Asbestos Survey & Lead-Based Pain Inspection Report completed by T. Brooks & Associates, Inc. (TBAI) in 2014 (TBAI, 2014). The following sub-sections briefly summarize relevant findings from this report.

##### 3.2.1 T. Brooks & Associates, Inc., 2014 Asbestos Survey & Lead-Based Paint Inspection Report

In 2014, T. Brooks & Associates, Inc. completed an “Asbestos Survey & Lead-Based Paint Inspection Report” of the Subject Property (TBAI, 2014). ACM and LBP were found throughout the Subject Property structure. Materials documented to contain ACM include dry wall taping mud and surface texture, plastic roof cement, walling paneling, vinyl floor tile and associated mastic, and a vibration damper. For LBP, 47

interior and 4 exterior samples contained lead in excess of 1.0 milligram per square centimeter (mg/cm<sup>2</sup>) and would be classified as “Lead-Based Paint” (LBP) under state and federal regulations.

The California Division of Occupational Safety and Health (Cal/OSHA) regulates all activities involving the disturbance of paint which contains “any detectable” amount of lead. Any construction related work which will disturb building elements which include paint or surface coatings determined to contain lead must be conducted in accordance with applicable local state and federal regulations governing disturbance of lead. Lead waste characterization is required under state and federal requirements prior to disposing of lead-containing waste.

### 3.2.2 Temple Andersen Moore Architects, 2022 H Street & Inyo Street Warehouse Feasibility Study

The User provided a “Feasibility Study” for the Subject Property which was referenced as the “H Street and Inyo Street” warehouse and completed by Temple Anderson Moore Architects (TAMA) in June 2022 (TAMA, 2022a). The feasibility study included: 1) an executive summary, 2) a Phase I ESA report completed by Provost & Pritchard Consulting Group (PPCG) dated December 23, 2021 (PPCG, 2021), 3) a site topographical survey by Alan Mok Engineering (AME) dated January 18, 2022 (AME, 2022), 4) an Asbestos Survey Report completed by Forensic Analytical Consulting Services (FACS) dated January 14, 2022 (FACS, 2022), 5), a preliminary structural assessment report by Parrish Hansen Structural Engineers (PHSE) dated February 16, 2022 (PHSE, 2022), and 6) a proposal and cost estimates prepared by TAMA for architectural and engineering services and contractor costs for demolition of the building (TAMA, 2022b, 2022c). The following sub-sections briefly summarize relevant findings from these reports.

- **Phase I ESA, PPCG, December 2021:** No RECs were revealed in connection with the Subject Property, but some environmental concerns were observed. LBP and ACM was observed on the Subject Property. Several generations of fluorescent lighting fixtures were noted to be present. Some ballasts that may contain PCBs were noted as well as the need to further evaluate and dispose in accordance with State regulations. An elevator was noted and described as appearing to be in good condition considering the age, with a motor and pump that did not appear to have obvious leaks. The report noted that the base of the elevator was not visible for observations to evaluate if the apparatus including pistons had leaked.
- **Topographic Survey Map, AMK, January 2022:** The map documents topographic survey of the Property completed on January 5, 2022. The map documents the location of the building and surrounding areas covered by concrete or pavement. Elevations of the ground surface surrounding the Property range from about 287 to 291 feet above mean sea level (amsl). The map identifies six features within the concrete loading dock on the northeast side of the building as “unknown vaults.” The locations of doors on the outside of the building are shown. No detail is shown for the interior of the building. The dimensions of the building are shown as being approximately 50.5 feet by 401 feet.
- **Asbestos Survey Report, FASC, January 2022:** The survey was focused solely on asbestos, and documented the following suspect materials that were sampled and confirmed by laboratory

analyses to contain asbestos: 12" vinyl floor tile (VFT) – Marble, 12" VFT – Pink, 3'x3' Floor Tile – Black, 9" VFT – Tan Oatmeal, Aircell, Drywall – Skip Trowel Texture, Drywall – Smooth Texture, Flooring Material - Black Vinyl, Transite Panels, Vibration Dampener, and 9" VFT – Black. The report noted that while lab results do not reflect all drywall materials as containing asbestos, it was recommended that all drywall containing a paint or texture finish be handled as asbestos-containing. This was due to the random nature of the drywall systems in the building and determining exactly where one system that contains asbestos may stop or start. The report noted that handling all drywall as asbestos-containing would remove the potential for an improper disturbance of the material during renovation activities.

- **Preliminary Structural Assessment Report, PHSE, February 2022:** The report provides a preliminary structural assessment of the building for future occupancy options. The report noted the following regarding the building construction:
  - The building dimensions are approximately 405 feet by 50.5 feet
  - The building contains two basement areas, with one at the south end of the building having dimensions of approximately 47 feet by 47 feet, and the other beneath the center of the building having dimensions of 47 feet by 100 feet.
  - The lower (and original) portion of the building's walls are constructed of brick, approximately 13-inches thick, and 14 to 16 feet tall. On top of the original wall, an extension of what was believed to be unreinforced concrete was added extending 6 to 8 feet above the original wall height, and resulting in a current uniform wall height of 22 feet.
  - The report noted that the wall extension may have been constructed following a major fire that damaged the roof, but that the 38% to 60% increase in the original wall height, would result in a 90 to 150% increase in the stress level of the original wall when subjected to out-of-plane wind or seismic loads, and an "extreme increase in seismic/wind risk from the original intended construction."
  - The two basement areas are constructed with brick walls and concrete floors. The report noted extreme deterioration to the bricks and mortar forming the walls.
  - The surface of the loading dock on the northeast side of the building is equal in elevation to the floor inside the building.
  - The structural engineer's opinion was that the building could experience significant damage at a Richter level 4 event, and catastrophic damage at a Richter level 5 event.
  - It was the opinion of the engineer that the remediation and upgrades required by the building code due solely to the existing structural deficiencies and deteriorations – without consideration of voluntary upgrades to enhance public safety – would cost considerably more than the replacement of this building with a new, similar type of construction.

- **Proposal and Cost Estimates for Demolition, TAMA, June 2022:** TAMA provided the City with a proposal to preparation detailed drawings and specifications for demolition of the building for a fee of \$12,500 (TAMA, 2022b). TAMA also provided a budgetary estimate of \$509,000 for demolition of the building, with assumptions that the wood roof frame structure and concrete could be recycled (TAMA, 2022c).

## 4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Subject Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Subject Property. During the review of historical records, Stantec attempted to identify uses of the Subject Property from the present to the first developed use of the Subject Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

### 4.1 PHYSICAL SETTING

A summary of the physical setting of the Subject Property is provided in the table below with additional details in the following subsections.

<b>Topography:</b>	The Subject Property is relatively flat, gently sloping to the northwest, and generally lies at approximately 292 feet above mean sea level (amsl). The Subject Property is depicted on the United States Geological Survey (USGS) 7.5-minute topographic map sheet of the Fresno South, California Quadrangle.
<b>Soil/Bedrock Data:</b>	According to the Environmental Risk Information Services (ERIS) Physical Setting Report (ERIS, 2022a) ( <b>Appendix D</b> ), the Subject Property is located in the Quaternary alluvium and marine deposits of the Pliocene to Holocene era. The Subject Property is located within an area of Delhi loamy sand and San Joaquin sandy loam. The Delhi component makes up 85 percent of the map unit and forms slopes of 3 to 9 percent. This component is on dunes and fan remnants of valleys. The parent material consists of eolian deposits derived from granite alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. The San Joaquin component makes up 90 percent of the map unit and forms slopes of 0 to 3 percent. This component is on fan remnants of valleys. The parent material consists of alluvium derived from granite. Depth to a root restrictive layer is 19 to 25 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is very low. Shrink-swell potential is moderate. Additional geologic information for the Property is discussed in Section 4.1.2.
<b>Estimated Depth to Groundwater/ Estimated Direction of Gradient:</b>	The ERIS Database Report did not include recent data regarding approximate depth to groundwater in the vicinity of the Subject Property. However, according to groundwater information available for a nearby site (located at 603 Broadway Street, approximately 541 ft southeast of the Property), depth to groundwater in the vicinity was approximately 95 ft below grade in 2016 (Central Valley Regional Water Quality Control Board 2016).
NOTE: Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

#### 4.1.1 Property Topography and Surface Water Flow

The Subject Property is located at an elevation of approximately 292 feet amsl. Topography at the Subject Property is generally flat, with a slight gradient to the northwest. Stormwater runs to the street gutters along H Street and Mono Street along the Subject Property boundary.

#### 4.1.2 Regional and Property Geology

The Subject Property is located within the Great Valley geomorphic province of California, consisting of an alluvial plain about 50 miles wide and 400 miles long in the central part of California. Its northern portion consists of the Sacramento Valley, drained by the Sacramento River and its southern portion consists of the San Joaquin Valley drained by the San Joaquin River. The Great Valley is a trough into which sediments have been deposited almost continuously since the Jurassic Period (about 160 million years ago). Large oil fields have been found in southernmost San Joaquin Valley and along anticlinal uplifts on its southwestern margin.

### 4.1.3 Regional and Subject Property Hydrogeology

The Subject Property is located within the Kings Sub-basin of the San Joaquin Valley Groundwater Basin (Department of Water Resources [DWR], 2006). The Kings Sub-basin is bounded to the north by the San Joaquin River, to the west by the Delta-Mendota and Westside Sub-basins, and to the south Empire West Side Irrigation District, the southern fork of the Kings River, and the boundaries of the Laguna, Kings County, Consolidated, Alta, and Stone Corral Irrigation Districts. The alluvium-granitic rock interface of the Sierra Nevada foothills comprises the eastern boundary of the Kings Sub-basin. Water-bearing formations in the Kings Sub-basin consist of unconsolidated continental deposits comprised of Tertiary and Quaternary age materials (DWR, 2006).

As noted in Section 4.1, the ERIS Database Report (ERIS, 2022b) (**Appendix D**) did not include recent data regarding approximate depth to groundwater in the vicinity of the Subject Property. However, according to groundwater information available for a nearby site (located at 603 Broadway Street, approximately 541 ft southeast of the Subject Property), depth to groundwater in the vicinity was approximately 95 ft below grade during in 2016, and groundwater flow direction was generally toward the northwest (Central Valley Regional Water Quality Control Board 2016). The groundwater information available for a nearby site (located at 655 G Street, approximately 600 feet south southwest of the Subject Property) groundwater flow direction during the first three monitoring events in October 2015, February and May of 2016, the flow direction was observed to be toward the south southwest, while it was toward the north in August 2016.

## 4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from ERIS, a third-party environmental database search firm. A complete copy of the database search report (ERIS, 2022b), including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in **Appendix D**.

Stantec evaluated the information listed within the database relative to potential impact to the Subject Property, assessing the potential for impacts based in part on the physical setting. Observations about the Subject Property and surrounding properties made during the Subject Property reconnaissance are provided in more detail in Section 5.

### 4.2.1 Listings for Subject Property and Nearby Sites with Potential to Impact Subject Property

The regulatory agency database report provided by ERIS (2022b) for the Subject Property was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the Subject Property. The following is a summary of the findings of the database review for the Subject Property. The complete regulatory agency database report for the Subject Property may be found in **Appendix D1**.

The Subject Property was identified as a FED BROWNFIELD along with the adjacent properties to the northwest and west of the Subject Property. The site was classified as a FED BROWNFIELD in 2014 indicating it was currently in the Phase I ESA process and contained the following information.

- Based on a review of historical documents, parcel APN -20ST [adjacent parking lot west of Subject Property] has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST [adjacent parcel north of Subject Property] and -23ST [Subject Property]. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST (Subject Property) is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885. No other details were listed in the ERIS Database report. The Subject Property being listed in the FED BROWNFIELD database does not represent a REC.

The following adjacent or neighboring sites identified in the ERIS Database Report are summarized below:

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
Records Review  
August 30, 2022

- The eastern and northern adjacent properties, identified as Parcels 467-04-20ST and 467-04-22ST at 801 H Street, are listed in the FED BROWNFIELD database (listing discussed above). These listings do not constitute RECs.
- The adjacent property, identified as City of Fresno Construction Trailer and Western Construction at 752 H Street, is located east of and adjacent to the Subject Property. This site was reported in the CUPA FRESNO database due to a past UST removal and closure. The site was also reported in the HAZNET database in 2002 and inactive in 2003. No violations were on record. No other details were listed in the ERIS Database report. These listings do not constitute a REC.
- The adjacent property, identified as AM Transmission and High Performance Auto Repair at 714 H Street, is located east of and adjacent to the Subject Property. This site was reported in the HAZNET database in 1994 and inactive in 1999. No violations were on record. This listing does not constitute a REC.
- The adjacent property, identified as Graph-X Printing Inc at 740 H Street, is located east of and adjacent to the Subject Property. This site was reported in the HAZNET database in 1992 and inactive in 1995. No violations were on record. This listing does not constitute a REC.
- The adjacent property, identified as Wheel Creations Plus at 710 H Street, is located adjacent to and east of the Subject Property. This site was reported in the HAZNET database in 1995 and inactive in 2000. No violations were on record. This listing does not constitute a REC.
- The adjacent property, identified as Wheel Creations Plus at 706 H Street, is located adjacent to and east of the Subject Property. This site was listed in the RCRA SQG database in 1990. As of April 2022, no violations were on record. The site also listed in the FINDS/FRS and HAZNET database due to the past use as an automotive parts and accessories retail facility. These listings do not constitute RECs.
- The adjacent property, identified as AAA Automatic Transmission, No Town Customz, and Bebro's Mardirosain at 704 H Street, is located adjacent to and east of the Subject Property. This site was reported in the HAZNET database. No violations were on record. This listing does not constitute a REC.
- The adjacent property, identified as 1 Stop Auto Shop & Just Dippin Customers at 728 H Street, is located adjacent to and east of the Subject Property. This site was reported in the HAZNET database in 2006 and 2007. No violations were on record. This listing does not constitute a REC.
- The adjacent property identified as Van De Pol Petroleum is located 95 feet southeast of the Subject Property. This site was reported in the FINDS/FRS database in 2015. No violations are on record. This listing does not constitute a REC.

Significant findings identified from Stantec's review of listings for nearby sites are summarized below:

- The property identified as Broadway Furniture at 755 Broadway is located approximately 434 feet to the east northeast of the Subject Property. This site was reported in the LUST and CUPA Fresno

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
Records Review  
August 30, 2022

databases. This site reported a release of gasoline/diesel on July 27, 2004, which reportedly impacted soil only. The discharge was discovered by the analysis of soils samples which were obtained by subsurface drilling and sampling carried out to facilitate a property sale. The USTs which were the source of the discharge were probably removed from the site in the 1960s. A No Further Action (NFA) letter was issued in October 2004. Based on the removal of petroleum-impacted soil, distance of the impacted-soil to the Subject Property boundary, and the regulatory oversight/status, this listing does not constitute a REC.

- The property, identified as Triangle Grain Co and Chris Mathys Property at 808 G Street, is located approximately 500 feet west of the Subject Property. This site was reported in the CUPA FRESNO, HHSS, HIST TANK, and UST SWEEPS databases due to the past presence of fuel underground storage tanks (USTs). No violations were reported. Based on the lack of violations, the distance of the site to the Subject Property boundary, and the regulatory oversight/status, this listing does not constitute a REC.
- The property, identified as American & Foreign and Georges Auto Care & Smog at 603 Broadway Street, is located approximately 541 feet east southeast of the Subject Property. This site was reported in the LUST, CUPA FRESNO, FED BROWNFIELD, RCRA NON GEN and UST SWEEPS databases. This site reported a release of gasoline/diesel on August 19, 2014, which reportedly impacted soil and groundwater. The release of petroleum product constituents discovered at the site during a UST removal. An NFA Letter was issued on July 7, 2016. Based on the distance of the site to the Subject Property boundary and the fact that the release has been granted regulatory case closure, this listing does not constitute a REC.
- The property, identified as Pep Boys-Fresno at 716 Broadway, is located approximately 560 feet northeast of the Subject Property. This site is reported in the HHSS, HIST TANK, UST SWEEPS, CUPA FRESNO, RCRA NON GEN and C&D DEBRIS REC databases due to the presence of waste oil tanks. No violations were reported. Based on the lack of violations and the distance of the site to the Subject Property boundary, this listing does not constitute a REC.
- The property, identified as Abandoned Gas Station at 655 G Street, is located approximately 601 feet south southwest of the Subject Property. The site is reported in the FED BROWNFIELD, CUPA FRESNO, and LUST databases. The release was discovered during a tank closure and removal in 1988. Soil and groundwater were contaminated, and groundwater was subsequently investigated. The case was closed, and an NFA letter was issued in 2018. The NFA stated that any remaining petroleum hydrocarbons at the site should continue to naturally attenuate and should not adversely impact environmental quality, the beneficial uses of groundwater, or pose an unacceptable risk to human health. No limited use regulations were issued for the site. Based on distance of the site to the Subject Property, the depth to groundwater (in excess of 100 feet), the low residual concentrations of petroleum hydrocarbons in groundwater, and that fact that the site has received 'NFA' status from regulators, this listing does not constitute a REC.
- The property, identified as Trini's Beacon at 603 G Street, is located approximately 765 feet south of the Subject Property. This site was reported in the DELISTED TANK, LUST, CUPA FRESNO, HHSS, EMISSIONS, HIST TANK, and UST SWEEP databases. The site reported a release of gasoline in 1998, which reportedly impacted soil only. In 2012, an NFA Letter/Closure Letter was issued based on the small volume and the migration of contamination was probably less than five feet below ground surface. Approximately 10 pounds of gasoline constituents may remain in the

soil and is expected to degrade naturally. Based on the removal of petroleum-impacted soil, distance of the impacted-soil to the Subject Property boundary, and the regulatory oversight/status, this listing does not constitute a REC.

- The property, identified as Felix Auto Mechanic at 804 F Street, is located approximately 820 feet west southwest of the Subject Property. This site was reported in the LUST, CUPA FRESNO, HHSS, HIST TANK, and UST SWEEP databases. The site reported a release of waste oil/motor oil/hydraulic fluid in 1990, which reportedly impacted soil only. In 2001, an NFA Letter/Closure Letter was issued. Based on distance of the impacted soil to the Subject Property boundary, and the regulatory oversight/status, this listing does not constitute a REC.
- The property, identified as Ace Trans-State Tires at 565 Broadway, is located 847 feet east southeast of the Subject Property. The site was reported in the LUST, CUPA FRESNO, HHSS, HIST TANK, and UST TANK databases. The site reported a release of gasoline to the soil and groundwater in 1986. The site was issued an NFA Letter in 2004. No documents were available on the state GeoTracker database. Based on the distance to the Subject Property, regulatory oversight, and closure of the site, this listing does not constitute a REC.

The remaining listings included in the ERIS environmental database report do not constitute RECs based on the nature of the listings and/or their distances from the Subject Property.

No orphan listings are identified in the regulatory database report.

### 4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec reviewed the State Water Resources Control Board's (SWRCB) GeoTracker database, and the California Department of Toxic Substances Control (DTSC) Envirostor database for records pertaining to the Subject Property and surrounding area. The Subject Property was not listed in the GeoTracker or Envirostor databases. Multiple other sites were listed within approximately 0.25-mile of the Subject Property. Details of these sites are discussed in Section 4.2.1, and conditions at these properties do not constitute RECs.

In addition to SWRCB and DTSC databases, Stantec requested records pertaining to the Subject Property from local government agencies including the Fresno County Department of Public Health – Division of Environmental Health (FCDPH-DEH), Fresno City Clerk's Office (directed to fire department and building department), and the San Joaquin Valley Air Pollution Control District (SJVAPCD).

#### Requested records included:

- **FCDPH-DEH** – Any documentation pertaining to the current or former presence of USTs, aboveground storage tanks (ASTs), hazardous materials/waste storage, disposal, or release, permits to operate, or notices of violation or infraction associated with the Subject Property.
- **City of Fresno** – Any documentation pertaining to building permits, certificates of occupancy, utilities, above ground storage tanks, below ground storage tanks, hazardous materials/waste

storage, disposal, or release, permits to operate, or notices of violation or infraction associated with the Subject Property.

- **SJVAPCD** – Any documentation pertaining to permits to operate, emissions permits, emissions inventory statements, health risk assessments, site inspection reports, source test reports, complaint investigation reports, notices of violation, enforcement actions, or asbestos notifications/records associated with the Subject Property.

Agency-provided documentation included:

- **FCDPH-DEH** – To date, a response has not yet been received. If a response is received that changes the conclusions of this report, an addendum will be issued.
- **Fresno City Attorney** – A response from the City was received on July 20, 2022, with a link to responsive records, which are included in **Appendix F**.
- **SJVAQMD** – To date, a response has not yet been received. If a response is received that changes the conclusions of this report, an addendum will be issued.

## 4.4 HISTORICAL RECORDS REVIEW

Copies of historical records reviewed by Stantec are included in **Appendix E**. The following sections summarize pertinent findings.

### 4.4.1 Land Title Records/Deeds

Land title records, deeds, and environmental liens were not provided by the User, and public records were not searched by Stantec.

### 4.4.2 Land Use Controls

Stantec was not contracted to obtain an environmental lien search report for the Subject Property. However, no liens or land use covenants were identified from the ERIS Database Report in connection with the Subject Property. In addition, no liens or land use covenants were identified in an “Environmental Lien and Activity Use Limitation (AUL) Search report for the Subject Parcel completed by Environmental Data Resources (EDR) on November 19, 2022, as part of the Phase I ESA completed PPCG in December 2021 (PPCG, 2021).

### 4.4.3 Aerial Photographs

Stantec reviewed historical aerial photographs provided by ERIS (2022c). The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone.

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
Records Review  
August 30, 2022

The Subject Property and adjacent areas were used for industrial and commercial purposes since at least 1937. In the aerial photo from 1937, the Subject Property appears to be in a similar configuration as it is currently. The southwest-adjacent property contains one or more railroad spurs which appear to have been active through at least 1975. The area directly southwest of the Subject Property was converted to a parking lot in 2006. Chukchansi Park, a baseball/multi-use stadium, appears visible directly to the north in 2006. A summary of Stantec’s findings from review of the ERIS Aerial Photo Decade Package for the Subject Property (ERIS, 2022c) (**Appendix E1**) is provided in the following table. All images were scaled to 1” = 500’.

Year	Observations				
	Onsite	Adjacent (Northwest)	Adjacent (Northeast)	Adjacent (Southwest)	Adjacent (Southeast)
1937, 1946, 1957, 1962, 1972	Developed with a warehouse	Developed with a warehouse	Developed with commercial structures across H Street	Developed with a rail yard	Developed with a warehouse across Mono Street
1975, 1984	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs	Undeveloped vacant land, previous warehouse is no longer present
1994	Similar in configuration / land use to previous photographs	Undeveloped vacant land, previous warehouse is no longer present	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs
1998	Similar in configuration / land use to previous photographs	Undeveloped vacant land, previous warehouse is no longer present	Similar in configuration / land use to previous photographs	Undeveloped vacant land, previous rail yard is no longer present	Vacant land, similar in configuration to previous photographs
2005, 2006, 2010, 2012, 2014, 2016	Similar in configuration / land use to previous photographs	Developed as a parking lot	Similar in configuration / land use to previous photographs	Developed as a parking lot	Vacant land, similar in configuration to previous photographs
2018, 2020	Similar in configuration / land use to previous photographs; in 2020 photo, parking lot contains what appear to be pedestal-mounted solar panels	Similar in configuration / land use to previous photographs; in 2020 photo, parking lot contains what appear to be pedestal-mounted solar panels	Similar in configuration / land use to previous photographs	Similar in configuration / land use to previous photographs	Developed as a parking lot

#### 4.4.4 City Directories

Stantec retained ERIS to research available reverse city directories for the Subject Property, in approximately five-year intervals (ERIS, 2022d). City directory findings for the Property and the immediately

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
Records Review  
August 30, 2022

adjacent portion of the parcel to the northwest (address of 755 and 771 H Street), are summarized on **Table 1**. The table presents the historical of identified occupants or uses for each of the four distinct sections of the buildings (Areas A-D) with the street number on H Street shown in parentheses. **Table 1** also incorporates data for each section of the building as identified on historic Sanborn maps, as well as information obtained from searches performed on historic newspaper digital archives.

City directory records for adjacent or nearby properties are summarized on the table below.

**City Directory Search (Adjacent Properties)**

Year(s)	Occupant	Address	Environmentally Sensitive
1927, 1937, 1942, 1947, 1955, 1960, 1965, 1970, 1975, 1980, 1985, 1990, 1995, 1999, 2003, 2008, 2013, 2016, 2020	Various Commercial Properties	710 – 800 H Street	No
1927, 1937, 1942, 1947, 1951, 1952	Kohler Steam Laundry	760 H Street	<b>Yes</b>
1927, 1937	Various Commercial Properties	801 H Street	No
1927	Calf Spray – Chemical Co	806 H Street	<b>Yes</b>
1937	Schonfeld D H Auto Repairs	726 H Street	<b>Yes</b>
1955, 1960	FRS Liberty Laundries	760 H Street	<b>Yes</b>
1960, 1965, 1970	Harris Auto Painting	704 H Street	<b>Yes</b>
1999	HI Performance Auto Repair Plus	704 H Street	<b>Yes</b>
1999	Anthony Mark Transmission	704 H Street	<b>Yes</b>
2008	Vargas Auto Repair	702 H Street	<b>Yes</b>

The adjacent properties to the east were used as multiple auto repair facilities from the 1930s to the 2000s. Based on the lack of recorded violations and/or open environmental cases associated with these properties, their historical use does not represent a REC.

A copy of the complete ERIS City Directory Report for the Subject Property and adjacent properties is included in **Appendix E2**.

**4.4.5 Historical Fire Insurance Maps**

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
 Records Review  
 August 30, 2022

of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Subject Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical property uses.

**Fire Insurance Map Evaluation (1885)**

	Description
Subject Property	Undeveloped, vacant land
Northeast	Developed with two dwellings and two commercial structures across H Street
Northwest	Undeveloped, vacant land
Southeast	Undeveloped, vacant land
Southwest	Undeveloped, vacant land

Southeast	Developed with Valley Lumber Co across H Street
Southwest	Developed with S.P.R.R. Freight Yard

Copies of the fire insurance maps provided by ERIS (2022e) are presented in **Appendix E3**.

#### 4.4.6 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute topographic maps (scale 1:24,000) of the Fresno South, California Quadrangle, and the Fresno North, California Quadrangle, to help identify past property usage and areas of potential environmental concern.

Phase I Environmental Site Assessment  
 735, 739, and 741 H Street, Fresno, California  
 Records Review  
 August 30, 2022

No RECs were identified from Stantec’s review of historical topographic maps of the Subject Property. A summary of Stantec’s findings from review of the EDR Historical Topo Map Report (EDR, 2020f) is provided in the following table. Copies of the maps are provided in **Appendix E4**.

Year	Observations	
	Onsite	Adjacent
1923, 1946, 1947, 1963, 1972, 1981, 2015, 2018, 2021	Specific site features are not depicted on this map	Specific site features are not depicted on this map. A rail yard is located adjacent to the east.

#### 4.4.7 Other Historical Information Sources

Another important historical resource accessed for the Phase I ESA was historical newspapers archives accessed via paid subscription (<https://www.newspapers.com>). This resource contains searchable copies of historical Fresno newspapers dating back to 1876, including every issue of the Fresno Bee from 1922 to present. Searches were conducted for each of the street addresses associated with the Subject Property (701, 705, 707, 719, 735, 737, 739, 741, and 755 H Street and 1745 Mono Street) as well as businesses formerly occupying the building as identified from city directory records and/or Sanborn fire insurance maps. Articles or ads documenting various uses and users associated with each address are noted on **Table 1**. Copies of select articles or ads are provided in **Appendix E5**.

## 5.0 SITE RECONNAISSANCE

A visit to the Subject Property and its vicinity was conducted by Michael Myers of Stantec on June 29, 2022. **Figure 2** illustrates the Subject Property and vicinity. Photographs collected during the Subject Property visit are included in **Appendix A**.

### 5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Subject Property that may indicate the presence of RECs. The reconnaissance of the Subject Property was conducted on foot and Stantec utilized the following methodology to observe the Subject Property:

- Traverse the outer Subject Property boundary.
- Traverse transects across the Subject Property.
- Traverse the periphery of all structures on the Subject Property.
- Visually observe accessible interior areas expected to be used by occupants or the public maintenance and repair areas, utility areas, and a representative sample of occupied spaces.

During site reconnaissance Stantec made special note of features potentially indicative of substantive environmental issues including the presence of above- and below-ground storage tanks, sumps, and drains, use and accumulation of hazardous materials, and evidence of chemical spills such as staining or etching of the ground surface.

### 5.2 GENERAL DESCRIPTION

Property and Area Description:	The Subject Property consists of an unoccupied warehouse at the northwest corner of the intersection of H Street and Mono Street, in a primarily commercial and light manufacturing district area of Fresno, California. The Subject Property is accessed from H Street. The Property contains one commercial structure.
Property Operations:	The Subject Property is currently unoccupied.
Structures, Roads, Other Improvements:	The single-story brick and concrete structure with two basements has been on the Property since before 1918.
Property Size (acres):	Approximately 0.54 acres.

Estimated % of Property Covered by Buildings and/or Pavement:	100%
Observed Current Property Use/Operations:	The Subject Property consists of an unoccupied warehouse.
Observed Evidence of Past Property Use(s):	The Subject Property appears to have been used for commercial use.
Sewage Disposal Method (and age):	The Subject Property is connected to the municipal sewer system.
Potable Water Source:	Fresno Water System Department
Electric Utility:	Pacific Gas & Electric Co

### 5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Subject Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	5-gallon bucket tipped over, leaking oil onto the concrete floor.
Drums (≥ 5 gallons):	Two empty 55 gallon poly drums.
Strong, Pungent, or Noxious Odors:	None observed.
Pools of Liquid:	Oil staining.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	Empty elevator hydraulic oil tank, lighting ballasts may contain or have contained polychlorinated biphenyls (PCBs).
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

### 5.4 INTERIOR OBSERVATIONS

The Subject Property contains a large single-story warehouse with two basements. The interior is dilapidated and contains significant accumulations of trash and debris. The building appears to have not been used in some time. The basement contains an elevator lift system which ran on hydraulics, and which was observed to have an empty hydraulic tank. Stantec was unable to determine if there was staining around the base of the elevator due to the poor lighting and layers of dust. A 5-gallon bucket filled with oil was observed to be turned over and leaking on to the concrete floor.

## 5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Subject Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	None observed.
Solid Waste Disposal:	None observed.
Potential Areas of Fill Placement:	None observed.
Wastewater:	None observed.
Stormwater:	Stormwater likely runs into the street gutter system.
Wells:	None observed.
Septic Systems:	None observed.
Other Exterior Observations:	No additional pertinent observations.

## 5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	None observed.
Former USTs:	None known or documented on the Subject Property, based on review of available records.
Other Underground Structures:	None observed.

## 5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	Empty hydraulic tank was located in the basement in relation to the elevator system.
Former ASTs:	No visible evidence of former ASTs was identified on the Subject Property.

## 5.8 ADJOINING PROPERTIES

### 5.8.1 Current Uses of Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	Parking lot.
SOUTH	Smart and Final retail store across Mono Street.
EAST	Strip building along H Street. Building is unoccupied and boarded/fenced.
WEST	Parking lot.

### 5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

### 5.8.3 Pits, Ponds, or Lagoons on Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds, and lagoons on adjoining properties:

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

## 5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The topography is relatively flat throughout the Subject Property.
--	--

## 6.0 INTERVIEWS

Stantec was able to interview Kirk Utterback, from the City of Fresno. He has no knowledge of any past releases and has a limited knowledge of the past use of the Subject Property.

## 7.0 EVALUATION

This section provides a summary overview of our findings, opinions, and conclusions.

### 7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and an inspection was evaluated to determine if RECs are present in connection with the Subject Property. Based on this information, Stantec made the following findings and developed the following opinions.

1	Hydrogeologic Conditions	<p><u>Finding:</u> The surface soil at the Subject Property reportedly consists of sandy loam soil types derived from either eolian (former dune) deposits or from alluvial fan remnants. Site specific groundwater measurement and quality data are not available, but regional groundwater studies and mapping tools suggest that the depth to groundwater at the Subject Property is approximately 95 feet bgs and the predominant flow direction is variable.</p> <p><u>Opinion:</u> Based on the significant depth to groundwater, groundwater is unlikely to be encountered during future construction activities. In addition, there is reduced likelihood for future structures to be impacted by vapors emanating from any contaminated plumes of groundwater emanating from potential upgradient off-site contamination sources, wherever they may be located.</p>
2	Previous Phase I ESA for the Subject Property	<p><u>Finding:</u> A previous Phase I ESA for the Subject Property was completed by PPCG in December 2021, on behalf of TAMA which in turn had the report prepared as part of a feasibility study for the Subject Property. The report identified two RECs, as follows:</p> <ul style="list-style-type: none"> <li>• <i>“Based on the age of the building and a previous investigation for Lead Based Paint and Asbestos Containing Materials in 2014, an updated investigation report should be completed.”</i></li> <li>• <i>“Several generations of fluorescent lighting fixtures are present. Some blasts may contain PCB’s and should be evaluated and disposed in accordance with State regulations.”</i></li> </ul> <p>The report also identified the following non-scope consideration:</p> <ul style="list-style-type: none"> <li>• <i>“The elevator appears to be in good condition considering the age, the motor and pump did not appear to have obvious leaks, but the base of the elevator was not visible for observations to evaluate if the apparatus including pistons had leaked.”</i></li> </ul> <p><u>Opinion:</u> Stantec generally concurs with the ACM, LBP, fluorescent light ballasts, and elevator equipment being identified as concerns, but would classify all as BERs rather than RECs or unspecified concerns. In addition, Stantec identified additional concerns as detailed in Finding/Opinion 7 related to historic use of Area C as a pesticide storage and distribution warehouse by the California Spray Chemical Corporation between 1931 and 1947.</p>
3	Previous Hazardous	<p><u>Finding:</u> An initial ACM and LBP survey for the building was completed in 2014 by TBAI and identified lead concentrations in excess of 1.0 mg/cm<sup>2</sup> in 47 of 199 interior</p>

Phase I Environmental Site Assessment  
 735, 739, and 741 H Street, Fresno, California  
 EVALUATION  
 August 30, 2022

	<p>Building Materials Surveys for the Subject Property Building</p>	<p>samples, and 4 of 14 exterior samples. The survey identified the following estimated quantities of materials containing ACMs:</p> <ul style="list-style-type: none"> <li>• Drywall taping mud and texture (5491 ft<sup>2</sup>); vibration dampeners (16 ft<sup>2</sup>)</li> <li>• Vinyl floor tiles and mastic (1,740 ft<sup>2</sup>)</li> <li>• Wall panels (264 ft<sup>2</sup>); Plastic roof cement (15 ft<sup>2</sup>)</li> </ul> <p>The report included an estimate of \$26,500 to abate these ACMs.</p> <p>A survey for ACMs only was completed in 2022 by FACS, and identified the following estimated quantities of materials containing ACMs:</p> <ul style="list-style-type: none"> <li>• <u>Friable/RACM: Aircell (240 linear feet); drywall – skip trowel or smooth texture with tape &amp; joint (14,240 ft<sup>2</sup>); vibration dampeners (4)</u></li> <li>• <u>Category I Non-Friable: Vinyl floor tile (11,687 ft<sup>2</sup>); floor tile (135 ft<sup>2</sup>);</u></li> <li>• <u>Category II Non-Friable: Transite panel (120 ft<sup>2</sup>)</u></li> </ul> <p>Neither study included assessment or sampling for other types of hazardous building materials and equipment that may be present within the building, including but not limited to PCBs in caulk, fluorescent light ballasts, elevators and other hydraulic equipment, fire alarms, and mercury switches.</p> <p><u>Opinion:</u> There are significant differences in the quantities of ACMs identified in the two reports, with greater quantities identified in 2022. In addition, the study completed in 2014 identified significant areas of lead based paint. These materials should be appropriately managed in conjunction with future building renovation or demolition activities. Additional sampling may be warranted to identify and quantify other types of hazardous materials or equipment that may be present in the building, including, but not limited to PCBs in caulk, fluorescent light ballasts, elevators and other hydraulic equipment, fire alarms, and mercury switches. The documented and/or potential presence of ACM, lead based paint, and other hazardous building materials and equipment is considered a BER.</p>
4	<p>Historical Uses of the Subject Property as a Whole</p>	<p><u>Finding:</u> The Property was shown as being vacant land on Sanborn fire insurance maps dated 1885, 1888, and 1898. On the map dated 1906, the Property was occupied by Madary’s Lumber Yard. An article in the Fresno newspaper dated 11/18/1909 referenced plans by the City to install an 18-inch diameter storm sewer beneath the sidewalk on H Street from Mono Street to Inyo Street to address repeated flooding occurring in this area every winter with heavy rains, flooding two businesses documented on Sanborn maps to have been present on the opposite (northeast) side of H Street. The article does not reference flooding of a building on the Subject Property.</p> <p>By 1918, the existing building was present, divided into four main areas with separate street addresses, ownership, and/or uses. As shown on <b>Table 1</b>, the earliest records for businesses at the primary addresses associated with the existing building date from 1910, 1912, 1913, and 1918. Sometime during 1950-1970, the walls of the building were extended in height by 6-8 feet (resulting in the current uniform wall height of approximately 22 feet) and a new roof constructed. This renovation is suspected to have been partly in response to a major fire that destroyed a large portion of the original roof.</p>

Phase I Environmental Site Assessment  
 735, 739, and 741 H Street, Fresno, California  
 EVALUATION  
 August 30, 2022

		<p>The last documented occupant of an area within the building was Falcon Enterprises of Fresno, and Fresno Tire Disposal listed at addresses of 733-735 H Street in the 1999 city directory. The building as a whole appears to have been vacant since approximately 2000. The City of Fresno reportedly owns the Subject Property, but records documented the date it was acquired were not obtained as part of the Phase I ESA.</p> <p><u>Opinion:</u> The historic records reviewed suggest that the building was likely constructed circa 1910-1912. The only documented uses prior to 1910 appear to be the use as a lumber yard in 1906, with this use likely does not date beyond 1898 when the Property appears to have been vacant land. The use of the Subject Property prior to construction of the existing building is not considered a REC.</p>
5	<p>Historical Uses of Area A (701-707 H Street; 1745 Mono Street)</p>	<p><u>Finding:</u> As shown on <b>Table 1</b>, documented historical occupants and uses of Area A include (see note 1 below):</p> <ul style="list-style-type: none"> <li>• 1910-1959: Valley Lumber Co. office (701, 705, 707) – see note 2 below.</li> <li>• 1932-1958: United Warehouse Company (701)</li> <li>• 1932-1958: Fowler Lumber Co (701, 707)</li> <li>• 1932: Alta District Lumber Co. (701)</li> <li>• 1937: Valley Lumber Co. – Johns Manville Inc. division – roofing supply warehouse (701)</li> <li>• 1958: Sequoia Lumber Co, Valco Lumber Distributors, Sequoia Lumber Co. (707)</li> <li>• 1955: The Feed Barn – livestock and poultry feed supplier</li> <li>• 1960: Fresno Chamber of Commerce</li> <li>• 1962-1970: Avernell &amp; Arioto (A &amp; A) Florists Inc. – wholesale florist supplies (1745)</li> <li>• 1975--2022: Vacant</li> </ul> <p><i>Note 1: See Finding/Opinion 4 for use of the Property as a whole (including Area A) before 1910. For the occupants/uses listed above, the numbers in parentheses are the street numbers identified with this occupant or uses in the historical records reviewed.</i></p> <p><i>Note 2: An ad dated 1910 identified the Valley Lumber Co. office as being located at the corner of H Street and Mono Street, but it is possible that this ad was referencing a former Valley Lumber Co. office shown on historic maps as located on the opposite (south) side of the intersection.</i></p> <p><u>Opinion:</u> Long-term use of Area A has been primarily as a lumber company office and a warehouse for various businesses. One of the documented uses (by Johns Manville) is of potential environmental concern, due to Johns Manville’s historic status as the world’s largest manufacturer of asbestos containing shingles and roofing materials. However, due to the apparent use of the building by Johns Manville and other businesses as an office or warehouse, the presence of a concrete floor, and the absence of any exposed outdoor areas, there is low likelihood of these uses would have resulted in contaminant releases to the environment.. Therefore, the documented historic uses of Area A are <u>not</u> considered to be a REC.</p>
6		<p><u>Finding:</u> As shown on <b>Table 1</b>, documented historical occupants and uses of Area B include (see note 1 below):</p>

Phase I Environmental Site Assessment  
 735, 739, and 741 H Street, Fresno, California  
 EVALUATION  
 August 30, 2022

	<p>Historical Uses of Area B (719-735 H Street)</p>	<ul style="list-style-type: none"> <li>• Circa 1911-1912: H. Graff Co. – grocery warehouse.</li> <li>• 1912-1926: Mark Lally Company (later Walworth-Lally Plumbing Supplies) – plumbing supply warehouse (735)</li> <li>• 1927-1932: Valley Lumber Co. – Johns Manville Inc. division – roofing supply warehouse (735)</li> <li>• 1948-1950: Valley Lumber Co. – hardwood and building material warehouse (719/735)</li> <li>• 1958: Zellerbach Paper Co. – warehouse (735)</li> <li>• 1963-1970: Butler Johnson Corp. – floor tile warehouse and/or wholesale floor covering business (735)</li> <li>• 1975-1990: Slater Furniture Co – furniture warehouse (735)</li> <li>• 1999: Falcon Enterprises of Fresno/Fresno Tire Disposal – tire recycling business (735)</li> <li>• 2002-2022: Vacant</li> </ul> <p><i>Note 1: See Finding/Opinion 4 for use of the Property as a whole (including Area B) before 1910. For the occupants/uses listed above, the numbers in parentheses are the street numbers identified with this occupant or uses in the historical records reviewed.</i></p> <p><u>Opinion:</u> Long-term use of Area B has been primarily as a warehouse. Two of the documented uses (as a Johns Manville roofing supply warehouse and by a tire recycling business) are uses of potential environmental concern at certain sites. However, due to the apparent use of the building by these businesses as a warehouse, the presence of a concrete floor, and the absence of any exposed outdoor areas, there is low likelihood of these uses would have resulted in contaminant releases to the environment. Therefore, documented historic uses of Area B are <u>not</u> considered to be a REC.</p>
<p>7</p>	<p>Historical Uses of Area C (737-739 H Street)</p>	<p><u>Finding:</u> As shown on <b>Table 1</b>, documented historical occupants and uses of Area C include:</p> <ul style="list-style-type: none"> <li>• 1913-1914: Angelo &amp; Son – fruit basket manufacturing and sales (741) – see notes 1 and 2 below</li> <li>• 1918: Wholesale produce business (741) – see note 2 below</li> <li>• 1929-1941: Germain Seed &amp; Plant Co. (737)</li> <li>• 1931-1946: California Spray Chemical Company (737, 739) – see note 3 below.</li> <li>• 1932: Eagle Transfer Co.(737)</li> <li>• 1947: Mid Valley Distributing Company (739) – beer distributor</li> <li>• 1958: Fresno Macaroni Co. (1937)</li> <li>• 1965: Zellerbach Paper Co. – warehouse (739)</li> <li>• 1970: Floor tile warehouse (739)</li> <li>• 1975-2022: Vacant (737, 739)</li> </ul> <p><i>Note 1: See Finding/Opinion 4 for use of the Property as a whole (including Area C) before 1910. For the occupants/uses listed above, the numbers in parentheses are the street numbers identified with this occupant or uses in the historical records reviewed..</i></p> <p><i>Note 2: Area C is labeled on the Sanborn fire insurance map dated 1918 as 741 H Street, but on subsequent maps dated 1948, 1950, and 1970 as 739 H Street. The association of the address of 741 H Street with Area C appears to have ended in the early 1920s.</i></p>

Phase I Environmental Site Assessment  
 735, 739, and 741 H Street, Fresno, California  
 EVALUATION  
 August 30, 2022

		<p><i>Note 3: Ads dated 1931-33 for California Spray Chemical Company at this address identify the storage distribution of pesticides and other hazardous materials, including VAPO-DUST No. 2e (described as an oil-pyrethrum insecticide), CYANOGAS (which utilized calcium cyanide as its active ingredient, a variety of Ortho Sulphurs, dusting lime, caustic soda, and a “complete line of pesticides”).</i></p> <p><u>Opinion:</u> Long-term use of Area C has been primarily as a warehouse, by businesses that are generally not associated with high potential for contaminant releases to the environment. The exception is California Spray Chemical Company, which occupied all or portions of Area C for at least 16 years, and which stored and distributed a wide-range of pesticides, poisons, and other hazardous materials. Due to the toxicity of these materials, there is potential for even minor releases (such as through cracks in the floor) to have resulted in significant releases to the environment. Therefore, the historic use of Area C by the California Spray Chemical Corporation is considered to be a REC.</p>
8	Historical Uses of Area D (741 H Street)	<p><u>Finding:</u> As shown on <b>Table 1</b>, documented historical occupants and uses of Area D include (see note 1 below):</p> <ul style="list-style-type: none"> <li>• 1918: Wholesale produce business (755) – see note 2 below</li> <li>• 1924-1942: Armour &amp; Company – wholesale meat supplier (741)</li> <li>• 1943-1948: United Fairway Produce Company (741)</li> <li>• 1948-1959: Brentwood Egg Company – egg warehouse (741)</li> <li>• 1970: Formica sink top warehouse (741)</li> <li>• 1975-2022: Vacant (741)</li> </ul> <p><i>Note 1: See Finding/Opinion 4 for use of the Property as a whole (including Area D) before 1910. For the occupants/uses listed above, the numbers in parentheses are the street numbers identified with this occupant or uses in the historical records reviewed.</i></p> <p><i>Note 2: Area D is labeled on the Sanborn fire insurance map dated 1918 as 755 H Street, but on subsequent maps dated 1948, 1950, and 1970 as 741 H Street. The association of the address of 755 H Street with Area D appears to have ended in the early 1920s.</i></p> <p><u>Opinion:</u> Long-term use of Area D has been primarily as a warehouse for wholesale food product businesses, and these documented historic uses are <u>not</u> considered to be a REC.</p>
9	Historic Uses of Neighboring Properties	<p><u>Finding:</u> Long-term commercial and/or industrial uses of note on adjacent or neighboring properties include:</p> <ul style="list-style-type: none"> <li>• <u>755 H Street (adjacent to northwest):</u> This property was occupied until approximately 1997 by a warehouse building of similar design and age as the building on the Subject Property. The portion of the building adjacent to the Subject Property was identified with the address of 771 H. Street in 1918 (when it was a produce warehouse) and with the address of 755 H Street beginning in 1924. Documented occupants of this portion of the building include the Los Angeles Soap Company (1924-1932), the American Cyanamid &amp; Chemical Corporation (1936-1942), and the Zellerbach Paper Company (1948-1950).</li> <li>• <u>631-653 H Street/1728-1748 Mono Street (neighboring property to southeast – across Mono Street):</u> Valley Lumber Co (from before 1898, 1918, 1948, 1950) Not shown on 1970 map.</li> </ul>

		<ul style="list-style-type: none"> <li>• <u>Neighboring property to southwest:</u> Railroad yard and freight warehouse (1898-1948, 1950, 1970)</li> <li>• <u>702-732 H Street (neighboring property to northeast – across H Street):</u> Valley Foundry &amp; Machine Works (1904-1951).</li> <li>• <u>754-764 H Street (neighboring property to northeast – across H Street):</u> Fresno Steam Laundry Co (1903, 1906), Thomas Parisian Dyeing &amp; Cleaning Works (1909), Kohler's Steam Laundry (1918, 1927, 1948), Fresno Steam Laundry (1951), Fresno Liberty Laundry (1954), Fresno Linen Service (1963, 1964). Building was demolished in 1964.</li> </ul> <p><u>Opinion:</u> Due to the presence of a building on the Subject Property since 1910-12, and the lack of outdoor areas, there is significantly reduced potential for air-borne pollutants associated with historic industrial or commercial activities on these neighboring properties to impact the Site. The significant depth to groundwater makes it unlikely that undocumented hazardous substance or petroleum releases on these neighboring properties could impact indoor air at the Subject Property due to off-gassing of contaminants from groundwater. There are no records suggesting that the steam laundry present for &gt;60 years at 754-764 H Street included significant use of dry cleaning chemicals. Therefore, the historic uses of these neighboring properties are not considered a REC for the Subject Property.</p>
10	Environmental Listings for Neighboring Properties	<p><u>Finding:</u> There are listings for 20 or more sites within a 0.5-mile radius of the Subject Property within one or more of the environmental databases searched</p> <p><u>Opinion:</u> Based on the type of listings, the distance, and locations of these sites relative to the Subject Property, and other factors, none of the sites are considered to represent a REC for the Subject Property.</p>
11	Site Visit Observations	<p><u>Finding:</u> During the site reconnaissance, Stantec observed a 5-gallon bucket that had been tipped over and was leaking oil on the floor of the building</p> <p><u>Opinion:</u> The spill of a small amount of oil onto a concrete floor on the interior of the building does not represent a significant environmental concern to the Subject Property and is considered a <i>de minimis</i> condition</p>

## 7.2 DATA GAPS

The federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a “data gap” as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
<b>Deletions or Exceptions from Scope of Work Referenced in Section 1.4:</b>	None
<b>Weather-Related Restrictions to Site Reconnaissance:</b>	None
<b>Facility Access Restrictions to Site Reconnaissance:</b>	None

Gap	Discussion
<b>Other Site Reconnaissance Restrictions:</b>	Could not determine if there was staining around base of hydraulic unit due to poor lighting and layers of dust
<b>Data Gaps from Environmental Records Review:</b>	None.
<b>Data Gaps from Historical Records Review:</b>	Historical records for the Subject Property were not always available in five-year intervals. This constitutes a data gap; however, based on available historical documents and consistent land use, this does not appear to change the conclusions of this report.
<b>Data Gaps from Interviews:</b>	The interview done with the Owner Representative did not have an extensive knowledge of the past use of the Subject Property and is considered a data gap.
<b>Other Data Gaps:</b>	None

### 7.3 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 of 735, 739, 741 H Street, Fresno, CA, the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. This assessment has revealed the following evidence of RECs in connection with the Subject Property:

- **REC:** The historic use of Area C within the building by California Spray Chemical Corporation from 1931-1947 as a pesticide storage and distribution warehouse is considered a REC for the Subject Property. Due to the toxicity of these materials, there is potential for even minor releases (such as through cracks in the floor) to have resulted in significant releases to the environment.

In addition, the following BER and *de minimis* condition were identified in connection with the Subject Property:

- **BER:** Previous studies completed in 2014 and 2022 documented significant quantities of ACM and lead based paint. Based on the age of the building and observations by Stantec, the building contains or is likely to contain other types of hazardous building materials and equipment, including, but not limited to PCBs in caulk, fluorescent light ballasts, elevators and other hydraulic equipment, fire alarms, and mercury switches. These materials will be to be further assessed and appropriately managed in conjunction with future building renovation or demolition activities.
- **De minimis condition:** During the site reconnaissance, Stantec observed a 5-gallon bucket that had been tipped over and was leaking oil onto a concrete floor within the interior of the building.

It is recommended that additional testing be conducted for hazardous building materials and equipment both to resolve inconsistencies in the materials identified as ACM in the two previous studies, and to test for other types of materials or equipment that were not assessed previously including potential PCBs in caulk and other building materials. If the building is demolished, consideration should be given to testing

**Phase I Environmental Site Assessment**  
**735, 739, and 741 H Street, Fresno, California**  
**EVALUATION**  
August 30, 2022

soil underlying Area C of the building for impacts from pesticides, so that appropriate management measures can be performed as part of backfilling or future site reuse.

## 8.0 NON-SCOPE CONSIDERATIONS

The scope of work completed was limited solely to those items in the ASTM E1527-21 standard. No ASTM E1527-21 defined "Non-Scope Considerations" were performed as part of this Phase I ESA.

## Appendix A Photographs of the Subject Property and Vicinity

Project No.: 185704673

**Photo 1**  
**Comments:** Northwest interior of building looking southeast. Elevator lift system visible on left of photo.

**Photo 2**  
**Comments:** Tiles

**Photo 3**  
**Comments:** Northwest end of building. Large bins containing debris and Christmas decor.

**Photo 4**  
**Comments:** Elevator lift system located southeast of north corner of building.

**Photo 5**  
**Comments:** Christmas decor located in northwest area of building.

**Photo 6**  
**Comments:** Large empty room looking southeast. Second room encounter from northwest end of building.

**Photo 7**  
**Comments:** One of several rooms at middle of building.

**Photo 8**  
**Comments:** One of two restrooms located at middle of building. Floor drain observed.

**Photo 9**  
**Comments:** One of several rooms at middle of building. This is the first room observed upon entering building

**Photo 10**  
**Comments:** Third large storage area encountered moving southeast through building.

**Photo 11**  
**Comments:** Southeast end of building looking southeast. Area is split into several rooms.

**Photo 12**  
**Comments:** Small room near the south corner of the building containing a small kitchen like area.

**Photo 13**

**Comments:** Small room near southeast corner of building. 5 gal bucket leaking oil.

**Photo 14**

**Comments:** Southeast corner of building. Misc debris and a former evaporative cooling unit.

**Photo 15**

**Comments:** Southeast end of building containing office furniture.

**Photo 16**

**Comments:** One of four toilets observed at southeast end of building. No floor drains observed.

**Photo 17**

**Comments:** One of two empty 55 gallon poly drums located at the southeast end of building.

**Photo 18**

**Photo 19**  
**Comments:** Small lof office area at the southeast end of the building. Located close to south corner.

**Photo 20**  
**Comments:** Small lof office area at the southeast end of the building. Located close to south corner.

**Photo 21**  
**Comments:** Staircase leading down to basement 1 at southeast end of building.

**Photo 22**  
**Comments:** Basement 1 containing misc debris.

**Photo 23**  
**Comments:** Small room located in basement 1 near south corner of building. Office chairs inside room.

**Photo 24**  
**Comments:** Basement 2 located at northwest end of building. Elevator cart.

**Photo 25**

**Comments:** Basement 2 elevator hydraulic system. No floor staining observed. Hydraulic tank empty.

**Photo 26**

**Photo 27**

**Comments:** Basement 2. Nothin of note.

**Photo 28**

**Photo 29**

**Comments:** Exterior south corner of building. Fire suppression system water piping visible.

**Photo 30**

**Comments:** Exterior east corner of building looking southwest.

**Photo 31**  
**Comments:** Exterior east corner of building looking northwest.

**Photo 32**  
**Comments:** Near exterior west corner of building looking southeast. Trees line the entire side of building.

**Photo 33**  
**Comments:** Near exterior south corner of building looking northwest.

**Photo 34**  
**Comments:** Adjacent property to the west contains railroad tracks.

**Photo 35**  
**Comments:** Triple pole mounted transformers located near south corner of building along Mono St.

**Photo 36**  
**Comments:** Single pole mounted transformer located near south corner of building along Mono St.

**Photo 37**  
**Comments:** Adjacent property to the north: Chukchansi Park.

**Photo 38**  
**Comments:** Demolished building located on east corner of H St and Inyo St.

**Photo 39**  
**Comments:** Strip of buildings located on northeast side of H Street. Buildings are boarded and fenced.

Phase I Environmental Site Assessment  
735, 739, and 741 H Street, Fresno, California

## Appendix B Stantec Resumes

Project No.: 185704673

# Alisha Harper

## Summary of Experience

Has 12+ years of experience providing key staff-level support in environmental service sectors with a primary emphasis in environmental site assessments and remediation. Projects are primarily U.S. domestic-based with some international projects. Key responsibilities include project management, report production, and product finalization.

Project management responsibilities include proposal preparation, project administration, client relations, field work scheduling, utility locate request, and deadline management.

Report production responsibilities include requesting/obtaining regulatory database reports, prepares/submits FOIA requests, site visits, interviewing of regulatory agencies and property owner representatives, consolidation of data, provides interpretative analysis of the data, technical writing, incorporating the data into the report in compliance with current ASTM Standards, and completion of site figures.

Product finalization responsibilities include report formatting, final report review, print to pdf, consolidation, and submission of the final product to the client.

## Significant Experience

**Phase I Environmental Site Assessments** – Over the past 6.5 years, have managed over 350 Phase I Environmental Site Assessments (ESAs) to current ASTM Standard Practice E 1527-13, the new ASTM Standard Practice E 1527-21 standards, as well as HUD standards; including, but not limited to:

- Retail complexes
- Church/ Schools
- Residential Properties
- Municipal Properties
- Petroleum facilities
- Manufacturing plants
- Commercial properties
- Scout camps
- Agricultural/grazing land

**Phase II Environmental Site Assessments** – Supports and manages the production of Phase II Environmental Site Assessment reports with an in depth review of the regulatory history of the site as well as preparing CADD report figures and the final support for formatting, word processing, and compilation of the final product.

**Drafting** – Drafted figures for Phase I ESAs and Phase II ESAs for the past 11 years in AutoCAD. Examples of drawings completed include, but not limit to:

- Site location maps
- Site plans
- Soil & groundwater sample locations
- Wetlands Delineation
- Flood Plain
- Radon Maps
- Boring Logs/GINT
- Quarterly reports for groundwater monitoring
- Geologic cross-section

## Alisha Harper

**Administrative** – Support and managed office and administrative duties for an Engineering firm from 2007 to 2010. Duties include office operations and was tasked with creating/processing client invoicing, accounts payable/receivable, proposal identification and production, client networking, and creation of marketing material in Photoshop and Microsoft PowerPoint.

Experienced in the following software:

- Microsoft Suite including:
  - Word
  - Excel
  - PowerPoint
  - Outlook
- Adobe including:
  - Photoshop
  - Acrobat
- Autodesk AutoCAD
- gINT

## David Holmes PG

Senior Environmental Scientist/Associate

David has more than 30 years of professional consulting experience performing and managing environmental assessment, investigation, and cleanup projects and helping public and private sector clients to secure funding to implement these projects. David has worked on hundreds of brownfield sites on behalf of local government and developer clients throughout the US. He has exceptional experience securing state and federal grants to support brownfields redevelopment and habitat restoration projects (with more than 126 grants and \$30 million in funding awarded to date).

### EDUCATION

Master of Science Geology, University of Wisconsin, Milwaukee, Wisconsin, 1988

Bachelor of Science Geology, University of Wisconsin, Milwaukee, Wisconsin, 1984

Doctoral Program Coursework, Ongoing, University of Wisconsin, School of Freshwater Science, Mequon, Wisconsin, 2018

OSHA, Health & Safety for Hazardous Waste Operations, 40-hour, 2011

### REGISTRATIONS

Professional Geologist #887-13, State of Wisconsin, First Issued 4/11/1996

### PROJECT EXPERIENCE

#### BROWNFIELDS

St. Ann Center for Intergenerational Care, Bucyrus Campus Development | Milwaukee, Wisconsin

David is assisting St. Ann Center with environmental issues encountered on a 27 parcel brownfield site located in one of the poorest neighborhoods in Milwaukee. The property is being developed into a \$25 million intergenerational care center that will employ more than 200 area residents. David assisted St. Ann Center in securing three state and USEPA brownfields cleanup grants totaling \$550,000 to be used to complete cleanup at the site. The two USEPA cleanup grants were the first awarded to a not-for-profit entity in Wisconsin.

Redevelopment Projects at the Historic Pabst Brewery Complex | Milwaukee, Wisconsin | Funding Specialist

David assisted Blue Ribbon Management LLC in procuring funding and implementing cleanup activities in support of three redevelopment projects at the historic brewery complex (at one time, the world's largest brewery). The developments include a \$12 million office

building (completed in 2014), a \$4 million microbrewery (marking the return of Pabst Brewing Co. to Milwaukee), and a \$44 million student residence in the historic bottling plant (completed in 2016). David assisted with securing local, state, and federal funding for assessment, cleanup, abatement, and infrastructure improvements in association with these projects, as well as performing related environmental assessment and due diligence work.

White Stone Village Development, Fiduciary Real Estate Development and Cobalt Partners LLC | Menomonee Falls, Wisconsin

David is assisting two developer clients (Fiduciary Real Estate Development and Cobalt Partners LLC) with environmental assessment, funding, and cleanup of the former D&L Manufacturing property and adjoining parcels forming a 50-acre development site in suburban Milwaukee. Assistance to date has included conducting Phase I and II ESAs, environmental site investigations, remedial planning, and oversight of approximately \$2 million in cleanup at the site (which includes four former manufacturing facilities, a bulk fuel storage facility, and a former gas station). The site is one of the largest redevelopment sites in suburban Milwaukee, both in terms of its land area and the value of the expected development (>\$120 million) which will include a Costco store, mid-box retail stores, a hotel, and approximately 340 market rate apartments. Assistance also included securing \$500,000 and \$250,000 State of Wisconsin brownfield grants to help offset environmental cleanup costs.

Site Revitalization Program Development | Washington County, Wisconsin

David is assisting Washington County in the development of a County-led Site Revitalization Program - a joint effort between the County Planning and Parks Department and the County's economic development agency. A goal for the program is to integrate the County's revitalization efforts focused on brownfields sites with the County's economic development and business retention /recruitment efforts, with a goal of maximizing the extent to which brownfields revitalization can effectively be linked to private investment and jobs creation. David served initially on an "economic toolbox" advisory committee for the County's lead economic development agency, one outcome of which was the successful application for a \$600,000 USEPA Brownfields Assessment Grant awarded in 2014 to a County-led coalition that included five of the County's incorporated cities and villages. David is managing implementation of grant-funded activities which include a county-wide inventory of brownfield sites, community outreach, and assessment and/or reuse planning for up to 20 priority brownfields sites.

USEPA Assessment and Cleanup Grant Applications

### **Assistance, Various Clients | Grant Writer**

Since 2005, David has authored or coauthored more than 90 successful applications to the USEPA for brownfields assessment, cleanup, area-wide planning, and revolving loan fund grants totaling \$19.1 million in funding. David has worked with local units of government (including cities, counties, and regional agencies) as well as non-profit organizations in 14 states (AK, CA, CO, FL, IL, IN, MN, ND, NY, OR, SC, UT, WA, and WI) in pursuing these grants. David has had significant success in working with first time grant applicants lacking previous experience in securing funding from USEPA. Including grants resulting from resubmittal, David's overall success rate exceeds 90%.

### **PECFA Site Investigations and Cleanup | Milwaukee County, Wisconsin | Project Manager**

David assisted Milwaukee County with assessment, cleanup, and Petroleum Environmental Cleanup Fund Act (PECFA) reimbursement for approximately 30 LUST sites owned or operated by the County, including the Milwaukee County Zoo, bus maintenance facilities, numerous parks and other County-owned properties.

### **Stock Lumber Property Redevelopment\* | Princeton, Wisconsin | Grant Writer/Project Manager**

David assisted the City of Princeton with assessment, cleanup, and redevelopment of a 7-acre former lumber yard property adjacent to the City's downtown with industrial uses dating to the 1870s. David assisted the City in procuring both a \$70,000 site assessment grant (SAG) from the Wisconsin DNR as well as a \$137,000 Blight Elimination and Brownfields Redevelopment Grant from the WI Dept. of Commerce, and then implementing both grants.

### **USEPA Brownfield Grant Implementation | Various Locations, Wisconsin, Minnesota, Washington**

Dave is assisting with all aspects of grant implementation including preparation of Quality Assurance Project Plans, preparation of eligibility determination requests, preparation of site-specific sampling and analysis plans, Site investigation reports and preparation of quarterly reports for 14 brownfields assessment grants awarded in Fiscal Years 2010-2013.

### **Brownfields Assessments - Waupun | Wisconsin**

David assisted the City with Phase I and II ESAs on 12 parcels. The City wanted to evaluate the parcels for environmental concerns before acquiring the properties for redevelopment and/or entry into a brownfields program.

### **Various Redevelopment Projects\* | Milwaukee, Wisconsin**

David facilitated Wisconsin Department of Commerce grants for three properties in the Milwaukee metropolitan area. The grants ranged from \$80,000 to \$240,000, with each grant being critical to the project proceeding. The grants allowed for development of an apartment complex, a custard stand, and an industrial laundry cleaning facility.

### **City of Goshen Brownfields Program\* | Goshen, Indiana |**

### **Project Manager**

David was responsible for implementation of two U.S. EPA brownfields assessment grants, two U.S. EPA cleanup grants, and five State of Indiana brownfields grants targeting an historic industrial area located adjacent to the Elkhart River. David was the primary author for brownfield grants totaling more than \$1.25 million. Work included Phase I and II ESAs, site investigation, and development of remedial action plans. U.S. EPA grant activities performed by David included preparation of initial site eligibility determination forms, a quality assurance project plan, site-specific sampling and analysis plans, and quarterly progress reports. Several firsts in the history of the U.S. EPA brownfield grant program were reportedly achieved on this project related to effective use of the assessment grants for leveraging subsequent cleanup grants.

### **Brownfields Program\* | Elkhart County, Indiana | Lead Grant Writer/Project Manager**

David was responsible for implementation of two USEPA brownfields assessment grants awarded to Elkhart County in 2006. David wrote the grant applications as well as applications for two additional assessment grants awarded by USEPA in 2009. As part of the brownfield inventory and prioritization task, a custom web-based geographic information system (GIS) computer application (the "e-Atlas") that uses ESRI ArcGIS Server technology designed specifically for brownfields identification, management, and analysis of environmental information. As part of the inventory, records for 5,600 potential brownfield sites stored in several non-spatial databases were mapped in the County's GIS and aligned with property parcels. In addition, more than 200,000 pages of paper inspection records collected for commercial and industrial properties throughout the County over 20 years as part of Groundwater Protection Program were indexed, scanned and linked into the County's document management system (Laserfiche). The web based GIS interface allows users to interact with the information via the map, and to view, query, buffer, and link to additional content. The e-Atlas subsequently served as the model for a similar system known as "INSIT" or Indianapolis Site Inventory tool, developed by the City of Indianapolis which is also a web based GIS application that utilizes ArcGIS Server technology.

### **City of Milwaukee Multi-Year Environmental Assessment Contracts\* | Milwaukee, Wisconsin**

David was the project manager for three multi-year environmental services contracts with the City of Milwaukee during 1994 through 2005. As part of these contracts, David managed more than 50 environmental assessment or environmental cleanup projects involving more than 500 vacant, abandoned, or underutilized brownfield parcels throughout the City.

The sites assessed ranged from vacant former residential lots to landfills, abandoned historic manufacturing facilities, rail yards, gas stations, to a 5-1/2 block area of the City being targeted for commercial redevelopment. A majority of the projects were performed in conjunction with redevelopment of City-owned parcels by private developers, or sites targeted for acquisition by

*\* denotes projects completed with other firms*

the City. A significant number of projects were performed in conjunction with USEPA or other state and federal grants. Milwaukee is noteworthy in having received more USEPA brownfields grants than any other local government in the U.S.

### **ENGINEERING GEOLOGY**

Ozaukee County NOAA Grant Application Assistance | Wisconsin

David provided grant application assistance as part of a team that wrote the application for Ozaukee County's 2009 grant from the National Oceanic and Atmospheric Administration. Stantec staff worked with the County and dozens of other project partners to coordinate the application, which resulted in the County being awarded a \$4.7 million grant from the American Recovery and Reinvestment Act. The grant is one of only three awarded in the Great Lakes Region and is among 50 grants that were awarded from a pool of 841 applications. It is the 10th largest grant of the 50 and the only grant awarded in Wisconsin.

### **ENVIRONMENTAL SITE ASSESSMENTS PHASE I, II, III**

City of Milwaukee Redevelopment Authority\* | Milwaukee, Wisconsin

David managed Phase II environmental assessment activities on behalf of the Redevelopment Authority of the City of Milwaukee throughout an approximate 5-1/2 block area located within an inner city area of Milwaukee. The project site contained more than 300 parcels that were developed for a variety of commercial, industrial, and residential uses in the late 1800's. Most of the project site was cleared in the 1960's and 1970's for a freeway project that was later abandoned. At the time of the assessment, the site consisted of more than 50 parcels with approximately 30 individual owners. Approximately 20 of the parcels contained buildings at the time of the assessment ranging in size from single family residences to four story commercial and multi-family residential buildings. Project activities included performance of a magnetometer survey and search for underground storage tanks (USTs) throughout all open areas of the site, performance of Phase II ESA soil and groundwater sampling on 20 parcels, excavation of test pits at approximately 50 suspected UST locations, performance of asbestos and pre-demolition surveys for seven commercial buildings.

City of Milwaukee Redevelopment – Environmental Assessment Activities\* | Milwaukee, Wisconsin | Project Manager

David was responsible for environmental assessment activities conducted on behalf of the City of Milwaukee for an approximate 2-1/2 block vacant inner city area. The site historically contained more than 80 commercial, industrial, and residential parcels with development dating to the 1880s. Historic land uses at the property included junk yard, chemical manufacturing, auto repair, paint mixing, car washes, miscellaneous commercial land uses, and residential. The project scope of work included performance of a Phase I ESA for the site as a whole, performance of a magnetometer survey and search for UST's throughout open areas of the property,

performance of Phase II soil and groundwater sampling at 10 parcels with historic land uses of environmental concern, performance of additional soil and groundwater testing necessary to fully define the nature and extent of impacts, evaluation of remedial alternatives, and development of a remedial action plan.

### **ENVIRONMENTAL SITE REMEDIATION**

Industrial Facility Remediation | Illinois | Project Manager

David was responsible for remediation of lead and petroleum impacts at four separate focus areas at a 106-acre industrial facility located in Illinois. Remedial activities included removal of approximately 5,000 tons of lead-impacted soil. An additional 1200 tons of lead-impacted soil was removed from a drainage swale area located in a separate portion of the property. Petroleum impacted soil was excavated from two additional areas. Worked was performed under the Site Remediation Program (SRP).

---

Neil has 21 years of experience as an environmental professional. His expertise includes site investigation design and implementation, geologic and hydrogeologic characterization, remediation planning and implementation, vapor intrusion evaluation, human health risk assessment and management, environmental compliance monitoring for remediation projects, development and implementation of in-situ bioremediation programs, and due diligence property evaluations. He is experienced in coordinating all aspects of project delivery including scope development, execution of field activities, coordination with outside consultants and subcontractors, and project close-out. Neil has successfully managed environmental investigation projects for large utility providers, major technology companies, and land developers, with an emphasis on collaborative relationships with regulatory and public stakeholders to ensure achievement of project objectives.

#### EDUCATION

BS, Geology, San Francisco State University, San Francisco, California, 1998

#### REGISTRATIONS

Professional Geologist #8503, State of California

## PROJECT EXPERIENCE

### Environmental Site Assessments

#### **Regional Utility Provider Service Centers, Davis and Emeryville, California (Project Manager)**

Neil managed tiered, iterative environmental investigations at regional service centers operated by a California gas and electricity provider. His findings of initial Phase I site assessments were used to guide subsequent investigations of soil, groundwater, and soil gas conditions at the sites. Key project milestones included identification of historical sources of chemical impacts, delineation of chemical constituents in various media, assessment of potential risk to site occupants, and investigation and dismissal of site features identified in the Phase I as potential sources of contamination. Investigative techniques frequently utilized high-resolution and rapid acquisition techniques such as cone penetrometer testing (CPT), membrane interface probe (MIP), and soil gas assessment using an onsite mobile laboratory. Use of these techniques frequently result in significant cost savings due to compression of the investigation timeframe. Work was performed under voluntary cleanup agreements with state regulatory agencies. Site data were used to construct a detailed human health and ecological risk evaluation to focus future characterization and potential remediation activities, with the ultimate goal of site certification and closure. Over the 8-year course of the project, Neil emphasized working closely with regulatory agencies to facilitate collaborative decision-making and minimize document review cycles, resulting in shorter duration between project milestones and cost savings for the client.

#### **Regional Utility Provider Service Center, San Francisco, California (Project Manager)**

Neil managed environmental characterization and subsequent remedial excavation of a parking lot associated with a major regional utility service center. Historical use of the site resulted in chemical impacts to shallow soil, soil gas, and groundwater from trichloroethene (TCE) and related compounds. Neil successfully negotiated risk-based cleanup goals protective of unrestricted future site use, and achieved the goals by removing impacted soils. Logistical issues included management of truck traffic through a busy mixed-use neighborhood, and addressing the concerns of adjacent neighbors regarding the possible migration of fugitive dust and vapors during the excavation. Neil worked with the utility's stakeholder engagement team to meet and collaborate with residents and come up with a mutually-acceptable solution. Stantec devised a dust and vapor mitigation system consisting of sealing off the balconies of adjacent residential properties and providing positive-pressure systems to prevent ingress of dust or vapors during the work. This mitigation step was completed over a weekend without negatively impacting the project timeline. Post-remediation sampling indicated remedial objective were achieved, and the site was granted regulatory case closure by the San Francisco Bay Regional Water Quality Control Board.

## Neil Doran PG

Principal Geologist

---

### **Former Litton Electron Devices Facility, San Carlos, California (Project Manager)**

Neil has managed an ongoing investigation and remediation program at a Northrop Grumman legacy site in San Carlos, California. Historical operations resulted in chemical impacts to shallow groundwater from chlorinated solvents, primarily trichloroethene (TCE) and related compounds. Neil's team has completed several rounds of site investigation intended to evaluate potential ecological risk due to discharge of groundwater to an adjacent surface water body, and to evaluate potential human health concerns associated with vapor intrusion. Neil designed and implemented an enhanced in situ bioremediation pilot study, which successfully reduced concentrations of chlorinated solvents in groundwater. The program was expanded, and has successfully remediated groundwater within the treatment cell to unrestricted levels. As part of the closure strategy negotiated with the regulating agency (San Francisco Regional Water Quality Control Board), Stantec expedited completion of a data gap investigation using membrane interface probe (MIP) to evaluate potential historical source areas. A portion of the site has received 'no further action' designation, and Stantec completed a final round of offsite groundwater assessment which is anticipated to result in regulatory case closure.

### **Major Technology Client, Santa Rosa, California (Project Manager)**

Neil managed post-treatment groundwater monitoring and reporting at a legacy technology client chlorinated solvent site. Project milestones included successful negotiation of reduced groundwater monitoring, use of passive sampling technology, and use of high-resolution CPT and MIP technologies to evaluate potential historical source areas. Neil's team designed and implemented a pilot-scale in-situ bioremediation program, which was subsequently expanded to several portions of the site. In situ bioremediation has successfully reduced concentrations of chlorinated compounds in groundwater, allowing the site to be closed with an environmental covenant (in process).

### **Southgate Norge Dry Cleaner Site, Sacramento, California (Project Manager)**

Neil managed operation and maintenance of a groundwater extraction and treatment system associated with a former dry cleaner, and directed additional source-area investigation and hydrogeologic modeling in support of remedial system optimization. Stantec used membrane interface probe (MIP) to evaluate potential deep vadose-zone source areas in the vicinity of wells with fluctuating concentrations of chlorinated solvents, and used hydrogeologic modeling to evaluate plume behavior under various pumping regimes. The findings of the investigation and modeling confirmed that sustained treatment of groundwater was the preferred remedy for control and degradation of the groundwater plume.

**Brownfield Remediation and Redevelopment  
Sacramento Railyards Project, Sacramento,  
California (Task Manager)**

Neil was a key member of the Stantec team performing environmental characterization and subsequent soil removal on an 18-acre property in the Sacramento Railyard brownfield redevelopment site. Site investigation activities consisted of characterization of soil and groundwater chemical conditions attributed to historical site operations; characterization of soil vapor conditions and assessment of potential human health risk under proposed re-use of the site as a hospital; and targeted removal of impacted soils. Work was performed with oversight from the Department of Toxic Substances Control and the California Regional Water Quality Control Board, and completion of the project benefitted from significant stakeholder involvement with regulatory and municipal entities.

**Site Research and Investigation  
City of Sacramento Historical Landfill,  
Sacramento, California (Project Manager)**

Neil managed initial characterization of a 6-acre historical landfill in Sacramento, California. Investigative methods consisted of exploratory trenching to define the lateral and vertical extent of landfill waste; chemical characterization of waste and underlying native material; and installation of landfill gas monitoring wells to evaluate the presence of methane and volatile organic compounds. Neil's team developed a 10% design package for landfill closure including evaluation of stormwater management, mitigation methods for endangered plant species, methane collection methods, and mass grading design.

**Major Technology Client, Boise, Idaho (Project  
Manager)**

Neil led an investigation of a 220-acre electronics manufacturing facility in support of property transfer. Pre-investigation activities consisted of detailed review of historical documents, interviews with key personnel, and inspection of the site to identify and rank potential historical chemical release areas. The comprehensive investigation consisted of indoor air sampling, evaluation of shallow soil conditions in suspected release areas, and installation and sampling of groundwater monitoring wells. The investigation was completed on an expedited basis to provide baseline conditions pertinent to the sale of the property.

**Restoration, Remediation and Redevelopment  
Alameda 2 Redevelopment, Alameda, California  
(Project Manager)**

Neil managed site investigation and remediation activities at a residential redevelopment site in Alameda, California. The project objective was obtaining unrestricted site use status for a former warehouse and manufacturing facility. Investigation activities consisted of defining the lateral and vertical extent of chlorinated solvents in soil and soil gas; establishing cleanup objectives protective of residential site use, including potential vapor intrusion exposure; and completing soil remediation to achieve those objectives. The work was performed under a Voluntary Cleanup Agreement with the California Department of Toxic Substances Control, and Neil worked closely with the DTSC to complete a Preliminary Endangerment Report justifying unrestricted site use. The PEA was approved, allowing site redevelopment to move forward.

**SUBJECT: Asbestos Survey & Lead-Based Paint Inspection Report**  
Commercial Structure  
735 – 741 "H" Street  
Fresno, California

Dear Mr. Gegunde:

In accordance with your request and authorization, **T. Brooks & Associates, Inc.** conducted an asbestos survey and lead-based paint inspection involving the above referenced commercial property. The enclosed survey has been prepared based on the results of our limited field investigation and review of laboratory analysis of bulk samples collected at the subject site.

The survey included representative sampling of suspect asbestos-containing materials at interior and exterior areas of the commercial structure in accordance with the NESHAP regulation of the U.S.E.P.A., the requirements of the San Joaquin Valley Air Pollution Control District, and Cal/OSHA regulations. It is our understanding that the Client wishes to be informed as to the presence and locations of asbestos-containing materials involving those portions of the commercial property considered as part of our investigation.

We appreciate the opportunity to assist you. If you should have questions or require additional information, please contact us at (559) 298-9135.

Respectfully,  
**T. BROOKS & ASSOCIATES, INC.**

  
Troy F. Brooks, CAC, RRC, CIEC  
Certified Asbestos Consultant, No. 92-0186  
CDPH Inspector/Assessor for Lead, No. 1398  
Certified Indoor Environmental Consultant

## **COMMERCIAL STRUCTURE 735, 739, & 741 H STREET FRESNO, CALIFORNIA**

---

### **ASBESTOS INVESTIGATION**

#### **INTRODUCTION**

In accordance with your request and authorization, **T. Brooks & Associates, Inc.** has conducted a limited Asbestos Survey involving the above referenced commercial structure located in Fresno, California. It is our understanding that the survey was requested due to possible demolition operations involving the commercial structure at the subject site. The following sections present a description of the structure, current site use, pertinent regulatory information, description of sampled materials, analysis of findings, and our recommendations specific to compliance with renovation operations.

#### **OBJECTIVE AND SCOPE OF SERVICES**

The objective of our investigation was to evaluate existing suspect building materials as to asbestos content. This investigation consisted of limited, representative bulk sampling, and subsequent laboratory analysis of suspect construction materials at interior and exterior locations of each address. Sampling was conducted utilizing limited destructive techniques. Suspect asbestos-containing materials were characterized by size, color and texture in order to quantify materials and to draw conclusions based on bulk sample results. In certain instances, building materials were "assumed" to be asbestos-containing.

Bulk sample analysis was provided by EMC Laboratories, an independent, NVLAP accredited laboratory (NVLAP No. 101926-0) specializing in asbestos analysis. Bulk samples were individually bagged and numbered for identification and to maintain a chain-of-custody as part of this report.

#### **APPLICABLE REGULATIONS**

##### **Environmental Protection Agency**

The National Emission Standard for Hazardous Air Pollutants (NESHAP), which was promulgated, by Federal Environmental Protection Agency (EPA), identifies "facilities" subject to

*T. Brooks & Associates, Inc.*

asbestos regulation and requires completion of prescribed procedures including "asbestos surveys" prior to commencement of demolition or renovation activities involving all commercial and certain residential structures.

### **Occupational Safety and Health Administration**

The Occupational Safety and Health Administration (OSHA), regulates construction activities, including those which involve asbestos containing materials. OSHA regulations for asbestos materials exist at both state (Cal-OSHA) and federal (Fed-OSHA) levels and are intended to protect workers from occupational exposures to these materials.

Federal asbestos regulations, including the Federal Construction Industry Asbestos Standard (29 CFR 1926.1101) and State of California Standard (Title 8 CCR 1529) mandate that all construction materials classified as Thermal System Insulation (TSI), or Surfacing Material (sprayed or troweled in place and of an acoustical nature) installed in buildings prior to January 1, 1981, be classified as “Presumed Asbestos Containing Materials” (PACM). This designation may only be refuted by extensive testing procedures of each homogeneous material in compliance with 40 CFR 763 Subpart E, the AHERA regulations of the EPA).

Appropriate controls including air sampling are required during the removal of any asbestos-containing material (ACM) in order to document fiber release, which may expose workers or others to hazardous levels of airborne asbestos.

### **Certified Asbestos Consultant and Site Surveillance Technician**

The California Business and Professions Code specifies that only a State of California, Certified Asbestos Consultant may provide design, environmental air sampling and other consulting services on behalf of building owners relating to abatement projects. Certified Site Surveillance Technicians typically perform bulk sampling, air monitoring, and other functions under the surveillance of a Certified Asbestos Consultant.

### **Definition of Asbestos-Containing Material**

Cal-OSHA	>0.1% by weight *
State of California, Health & Safety Code	>0.1%
Fed-OSHA	>1.0% by weight
Cal-EPA	friable and >1.0% asbestos
EPA	friable and >1.0% asbestos

\* Under Cal-OSHA regulations, materials containing between 0.01% - 1.0% are classified as Asbestos Containing Construction Material (ACCM). The material is not regulated by the EPA and waste may be disposed of as non-hazardous. Cal-OSHA regulations would be applicable for worker protection.

**Work Categories - Fed OSHA, 29 CFR 1926.1101  
Cal-OSHA, Title 8, CCR 1529**

Classify abatement operations under four (4) distinct activities, which trigger different provisions within the standard. Those activities presenting the greatest risk are designated Class I work, with decreasing risk potential for each successive class.

The four work categories and brief descriptions are as follows:

**Class I** - Abatement involving thermal system insulation (TSI) and sprayed-on or

**Class II** - Abatement of ACM or PACM other than TSI or Surfacing Materials.

**Class III** - Repair and maintenance operations which are likely to disturb ACM, or

**Class IV** - Custodial and housekeeping operations where minimal contact with ACM

**Unclassified** - Operations involving abatement of materials which contain detectable levels of asbestos up to and including, but not in excess of 1.0%.

Refer to **Appendix G** for specific information regarding specific procedures for demolition or renovation activities.

## **INVESTIGATION**

The inspection and sampling event involving the subject structure was conducted by Tim Thomas Certified Asbestos Consultant (09-44887) on May 9 & 16, 2014. Professional Certifications and Laboratory Certifications are presented in **Appendix H**.

### **Building Construction and Use**

The referenced structure is composed of three different commercial spaces, each with a distinct address. The structure is of masonry construction. Interior finishes within the structure included gypsum wallboard and plaster wall and ceiling finishes. The structure is on a raised wood foundation. Floor coverings include sheet vinyl flooring and vinyl floor tile. A floor plan was prepared for our use in documenting sampling locations and for quantifying those materials testing positive for regulated levels of asbestos. The date of construction was not provided for our use. The structure included a basement.

### **Materials Sampled**

Materials to be sampled were at the discretion of the sampler and were selected based upon their likelihood of containing asbestos as an integral or incidental part of their construction. The sampled materials were intended to represent homogeneous materials present in each distinct sampling area.

Materials selected for sampling and subsequent laboratory analysis included the following:

**PROJECT LOCATION: Commercial Building – 735 H Street, Fresno, CA**

<u>Sampled Materials</u>	<u>EPA Classification</u>	<u>NESHAP CAT.*</u>
<b>Flooring Materials</b>		
- 9" x 9" Vinyl Floor Tile w/ Mastic	Miscellaneous Material	Cat. I, N.F.**
- 12" x 12" Vinyl Floor Tile w/ Mastic	Miscellaneous Material	Cat. I, N.F.**
- 4" Base Coving w/ Adhesive	Miscellaneous Material	Cat. II N.F.
- Vinyl Sheet Flooring w/ Mastic	Miscellaneous Material	RACM
- 9" x 9" Vinyl Floor Tile w/ Vapor Barrier & Mastic	Miscellaneous Material	Cat. I, N.F.**
<b>Wall Materials</b>		
- Drywall w/ Taping Mud & Texture	Miscellaneous Material	RACM
- Drywall w/ Texture	Miscellaneous Material	RACM
- Drywall w/ Taping Mud	Miscellaneous Material	RACM
- Wall Paneling	Miscellaneous Material	Cat. II N.F.
- Wood Wall Panel w/ Mastic	Miscellaneous Material	Cat. II N.F.
- Plaster w/ Texture/Paint	Miscellaneous Material	RACM
- Plaster Wall Finish	Miscellaneous Material	RACM
<b>Ceiling Materials</b>		
- 6' x 4' Ceiling Tile	Miscellaneous Material	RACM
- 12" x 12" Ceiling Tile & Mastic	Miscellaneous Material	RACM
<b>Miscellaneous Materials</b>		
- Vibration Damper	Miscellaneous Material	RACM
- Duct Cloth	Miscellaneous Material	RACM

\* These classifications are based on classifications by the AHERA regulations of the Environmental Protection Agency. All asbestos-containing materials may be rendered friable by the forces acting upon them.

\*\* Removal of flooring finishes and associated mastics by mechanical means, including the use of buffing wheels would change the classification to RACM and require that the material be packaged, transported and disposed of as asbestos-containing hazardous waste. Requires compliance with NESHAPS.

**Sample Results – 735 H Street, Fresno, CA**

Of those samples submitted for analysis, a total of thirteen (13) samples included one or more layers which tested positive for asbestos in amounts >1.0%. The samples testing positive for asbestos in amounts >1.0% included: Drywall Taping Mud & Texture (2 samples), Drywall Texture (1 sample), Wall Paneling (4 samples), 9" x 9" Vinyl Floor Tile (1 sample), 9" x 9" Vinyl Floor Tile & Associated Mastic (3 samples) and Vibration Damper (2 samples).

**Point-Count Analysis – 735 H Street, Fresno, CA**

All seven (7) samples of Drywall w/ asbestos-containing Taping Mud was reanalyzed by “Point-Count” method as allowed under the NESHAP regulation. Based on the “Point-Count” analysis, the Drywall w/ Taping Mud composite for each sample was confirmed as containing asbestos at levels <1.0%. Based on the analysis, the material represented by these results would be classified as “Asbestos-Containing Construction Debris (ACCM)” in California.

Drywall w/ Taping Mud represented by these results may be disposed of as General Construction Debris (non-hazardous), once removed from the subject premises by a licensed abatement contractor. Under the NESHAP, building materials containing asbestos at levels <1.0% are not required to be removed prior to conducting demolition operations. The presence of ACCM during demolition operations would impose additional requirements on the demolition contractor, including DOSH registration and compliance with Cal/OSHA requirements. Refer to 8 CCR 1529 for additional information concerning OSHA requirements.

**PROJECT LOCATION: 739 H Street, Fresno, CA**

<u>Sampled Materials</u>	<u>EPA Classification</u>	<u>NESHAP CAT.*</u>
<b>Flooring Materials</b>		
- No Samples Fit Category		
<b>Wall Materials</b>		
- Drywall w/ Taping Mud (Assumed ACM)	Miscellaneous Material	RACM
<b>Ceiling Materials</b>		
- No Samples Fit Category		
<b>Miscellaneous Materials</b>		
- No Samples Fit Category		

\* These classifications are based on classifications by the AHERA regulations of the Environmental Protection Agency. All asbestos containing materials may be rendered friable by the forces acting upon them.

**Sample Results – 739 Fulton Street, Fresno, CA – Assumed ACM**

The corner office area within 739 Fulton Street was inaccessible therefore, drywall and taping mud is assumed to be asbestos-containing. All gypsum wallboard at interior and exterior portions of the office area shall be considered asbestos-containing material unless representative sampling is conducted by licensed personnel and found to test negative for asbestos.

**PROJECT LOCATION: Commercial Building – 741 H Street, Fresno, CA**

<u>Sampled Materials</u>	<u>EPA Classification</u>	<u>NESHAP CAT.*</u>
--------------------------	---------------------------	---------------------

**Flooring Materials**

- No Samples Fit Category

**Wall Materials**

- Plaster Wall Finish	Miscellaneous Material	RACM
-----------------------	------------------------	------

**Ceiling Materials**

- No Samples Fit Category

**Miscellaneous Materials**

- No Samples Fit Category

\* These classifications are based on classifications by the AHERA regulations of the Environmental Protection Agency. All asbestos containing materials may be rendered friable by the forces acting upon them.

**Sample Results – 741 H Street, Fresno, CA**

Of those samples submitted for analysis, none (0) tested positive for detectable levels of asbestos. All building materials represented by these results may be treated as non-asbestos containing building material.

**PROJECT LOCATION: Exterior Locations – 735, 739, & 741 H Street, Fresno, CA**

<u>Sampled Materials</u>	<u>EPA Classification</u>	<u>NESHAP CAT.*</u>
--------------------------	---------------------------	---------------------

**Flooring Materials**

- No Samples Fit Category

**Wall Materials**

- Exterior Brick & Mortar	Miscellaneous Material	RACM
---------------------------	------------------------	------

**Ceiling Materials**

- No Samples Fit Category

**Miscellaneous Materials**

- Built-up Roofing	Miscellaneous Material	Cat. I, N.F.
- Roof Penetration Mastic	Miscellaneous Material	Cat. I, N.F.

\* These classifications are based on classifications by the AHERA regulations of the Environmental Protection Agency. All asbestos containing materials may be rendered friable by the forces acting upon them.

## **Exterior Sample Results – 735, 739, & 741 H Street, Fresno, CA**

Of those samples submitted for analysis, none (0) tested positive for detectable levels of asbestos. All building materials represented by these results may be treated as non-asbestos containing building material.

## **ANALYSIS OF FINDINGS**

Asbestos-containing materials are classified by their "Friability" which is defined as material that when dry may be crumbled, pulverized, or reduced to powder by hand pressure. In addition, the "Friability" classification is not only determined by the nature and condition of the ACM, but also by work practices to which the material may be exposed during renovation activities. The "Friability" classification is critical in determining the applicable regulations, work practices and disposal requirements.

### **Drywall Taping Mud & Surface Texture**

Drywall collected from specified areas of the subject structure were found to contain taping mud which contained in excess of 1.0% asbestos content. The drywall also contained surface texture which includes asbestos at levels >1.0%. Removal of drywall with asbestos containing taping mud and surface texture would be classified as a "Class II" operation under Cal/OSHA. Based on the presence of asbestos-containing texture, the drywall would be classified as RACM and must be disposed of as Hazardous Waste. Workers engaged in the work would be covered under applicable Cal/OSHA regulations. Under the NESHAP, the presence of an "add-on" layer precludes composite analysis of the drywall material to achieve a total asbestos content of less than 1.0%.

### **Drywall Surface Texture**

Drywall which includes an add-on layer such as surface texture which includes asbestos content in excess of 1.0% is classified as RACM under the NESHAP for the purposes of regulated construction activities. Renovation or demolition operations involving drywall which includes asbestos-containing surface texture would be classified as a Class II operation under Cal-OSHA. Under the NESHAP, the presence of an "add-on" layer precludes composite analysis of the drywall material to achieve a total asbestos content of less than 1.0%.

### **Drywall Taping Mud – Point-Count Analysis**

Drywall wall and ceiling systems which include asbestos-containing taping mud typically contain less than 1.0% asbestos content as a composite system. Samples collected at the subject site found to include asbestos-containing taping mud were reanalyzed by "Point-Count" method as allowed under the NESHAP to accurately determine asbestos content of the drywall system. Based on the Point-Count analysis, the Point-Counted samples were found to contain <1.0% asbestos

content. Building materials represented by these results would not be considered “Regulated Asbestos Containing Material” (RACM) and may be disposed of as non-hazardous construction debris. Workers engaged in the removal process would be covered by Cal/OSHA regulations governing asbestos related work. Removal of drywall with asbestos content of <1.0% would be an “Unclassified” operation under Cal/OSHA.

### **Plastic Roof Cement**

Plastic roof cement, collected at a representative roof penetration was found to contain regulated amounts of “Chrysotile” asbestos. Under current Cal/OSHA regulations, mastics and coatings are classified as non-friable ACM. Removal must be completed utilizing hand tools only.

### **Wall Paneling**

Wall paneling tested positive for regulated levels of “Chrysotile” asbestos. Wall paneling in good condition is normally classified as non-friable ACM. Removal must be completed utilizing hand tools only to preclude rendering the material friable. Removal of asbestos-containing wall paneling would be a Class II operation under Cal/OSHA regulations.

### **Vinyl Floor Tile & Associated Mastic**

Vinyl floor tile and associated mastic is normally classified as non-friable material in terms of abatement operations, transportation, and disposal. Non-friable materials, when packaged properly, may be disposed of at a local landfill accepting non-friable ACM. Mastic must be in a non-liquid state to be accepted by most landfills.

Under the NESHAP, removal of vinyl floor tile and associated mastic using mechanical means would render the materials friable, changing their status to RACM. Abatement of RACM in amounts exceeding the minimum threshold amounts would require filing of a completed Notification with the SJVAPCD, a ten-day waiting period, transportation by a licensed hazardous waste hauler, and disposal as hazardous waste.

Removal of these materials would be classified as a Class II operation under current OSHA regulations. Notification to the local Cal-OSHA office is required prior to commencement with operations which will disturb these materials.

### **Vinyl Floor Tile**

Vinyl floor tile is normally classified as non-friable material in terms of abatement operations, transportation, and disposal. Non-friable materials, when packaged properly, may be disposed of at a local landfill accepting non-friable ACM.

Under the NESHAP, removal of vinyl floor tile using mechanical means would render the material friable, changing its status to RACM. Abatement of RACM in amounts exceeding the minimum threshold amounts would require filing of a completed Notification with the SJVUAPCD, a ten-day waiting period, transportation by a licensed hazardous waste hauler, and disposal as hazardous waste.

Removal of the floor tiles would be a Class II operation under OSHA regulations. Notification to the local Cal-OSHA office is required prior to commencement with operations which will disturb these materials.

### **Vibration Damper**

Samples collected from the Vibration damper were found to contain “Chrysotile” asbestos. Vibration damper would be classified as “RACM”. Removal would consist of a Class II job under Cal/OSHA. All vibration dampers on HVAC systems within the referenced commercial structure or on mechanical system elements would be considered to be “asbestos-containing” and must be treated as asbestos-containing material unless additional sampling is conducted. The material must be transported, manifested and disposed of as asbestos-containing hazardous waste and requires use of a hazardous waste manifest.

## **ADDITIONAL CONSIDERATIONS**

Under the NESHAP, abatement of non-friable ACM is not required unless the proposed renovation and/ or demolition operations would render such materials friable.

Fees to the San Joaquin Valley Air Pollution Control District (SJVAPCD) would be required for abatement work which includes in excess of 160 s.f., 260 l.f., or 35 c.f. of “Regulated Asbestos-Containing Material”, or any work classified under the NESHAP as a “demolition”. All proposed abatement and/or demolition operations would require compliance with OSHA and NESHAP regulations and procedures. A mandatory ten-working day waiting period is required prior to proceeding with regulated abatement activities, defined as disturbance of regulated amounts of RACM, or non-friable ACM which becomes friable, as well as “any” demolition involving the structure on the subject site, regardless of whether asbestos is present.

## **REGULATORY AGENCIES AND REQUIREMENTS**

Following is a brief description of regulatory agencies and regulatory requirements:

### **Federal**

Environmental Protection Agency (EPA) - NESHAP Notification - 04 CFR 16 - Subpart M  
Requires notification in all demolition operations whether the building contains asbestos or

not. Requires notification when renovation/demolition involves more than 160 square feet or 260 linear feet of friable ACM, or 35 cubic feet of RACM.

### **San Joaquin Valley Air Pollution Control District**

San Joaquin Valley Air Pollution Control District (SJVAPCD) - Enforcement of NESHAP regulations.

Enforces notification in all demolition operations whether the building contains asbestos or not, and all renovation projects involving in excess of 160 square feet, 260 linear feet, or 53 cubic feet of RACM.

Requires the removal of all regulated ACM before demolition/renovation process. Non-friable Category I and II (ACM may be required to be removed at the discretion of the local air pollution control district. Typically, the SJVAPCD while not requiring abatement of non-friable ACM in intact condition prior to conducting demolition operations, recommends that all ACM including non-friable ACM be abated as forces associated with normal renovation/demolition operations may render such materials friable. This exemption normally does not apply to scheduled burn operations.

### **Cal-OSHA**

State of California, Department of Industrial Relations, Division of Occupational Safety and Health Enforces regulations pertaining to worker protection. New Cal-OSHA standard (8 CCR 1529 (took effect on July 1, 1991) and was adopted from the Federal OSHA standard. The standard mandates procedures and engineering controls necessary to protect employees of the contractor, building occupants and others. Requires filing of a “Temporary Jobsite Notification” with the local compliance office, prior to commencing with abatement activities involving any quantity of material.

## **RECOMMENDATIONS**

Prior to proceeding with any scheduled abatement or demolition operation involving the referenced commercial structure located at the subject site, have all building materials identified in this report as containing asbestos in amounts >0.1%, and which will be disturbed by activities associated with the proposed work operations removed by a qualified, licensed abatement contractor with a demonstrated history of similar projects and regulatory compliance. Insure that all work operations are conducted in accordance with applicable EPA and OSHA requirements. The Contractor should be required to document evidence of current training, licensing and asbestos specific insurance coverage.

Retain the Services of a State of California, Certified Asbestos Consultant. The consultant may provide project design, management, air monitoring and other services, which will ensure compliance with applicable regulations and protect the Building Owner against any potential liability which may arise as a result of work associated with work operations involving the subject structure.

Prior to proceeding with any “demolition” operation as defined under the NESHAP involving the subject structure, comply with the Notification requirements the SJVAPCD, and pay required

fees. By law, a “demolition” is defined as any operation which removes an intact structural building element, in addition to full-scale demolition operations. Wait the required ten (10) working days after filing the notification before proceeding with regulated abatement and/or demolition operations involving the subject property.

## **LEAD-BASED PAINT INSPECTION REPORT**

### **OBJECTIVE AND SCOPE OF SERVICES – LEAD**

The inspection and lead sampling event of the subject commercial structure was conducted by Mr. Chad Calhoun, CDPH Inspector/Assessor for Lead, No. 19036 on May 9, 2014. Professional Certifications and Laboratory Certifications are presented in **Appendix H**.

#### **Scope of Investigation**

The Lead-Based Paint Inspection was conducted in accordance with Title 17 - California Code of Regulations, Division 1, Chapter 8, 8 CCR 1532.1 (Cal/OSHA). The sampling event was conducted in a manner which provides limited, representative evaluation of painted surfaces at referenced locations at the subject site in accordance with the HUD schedule in Chapter 7 (Lead-Based Paint Inspection) of the “Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing”. Testing locations provide an overall representation of painted finishes present at the site. The referenced inspection is representative in nature and is limited based on the limitations of the referenced regulatory standard.

#### ***PROJECT SITE: 735 H Street, Fresno, CA – Interior Areas***

Sampling of painted surfaces for suspect lead-based paint at referenced commercial space at the subject site included testing of one hundred sixty-four (164) separate testing combinations. The XRF instrument was calibrated prior to and following the prescribed sampling period in accordance with the Performance Characteristic Sheet provided by the manufacturer. Calibration readings are included in the XRF sampling results as the initial and concluding readings and are designated as a “calibrate” reading. The calibration readings were compared to a known concentration of lead using a standard SRM sheet provided by the XRF manufacturer to verify accurate performance of the instrument at the beginning and the conclusion of the sampling episode.

#### ***PROJECT SITE: 739 H Street, Fresno, CA – Interior Areas***

Sampling of painted surfaces for suspect lead-based paint at referenced commercial space at the subject site included testing of nineteen (19) separate testing combinations. The XRF instrument was calibrated prior to and following the prescribed sampling period in accordance with

the Performance Characteristic Sheet provided by the manufacturer. Calibration readings are included in the XRF sampling results as the initial and concluding readings and are designated as a “calibrate” reading. The calibration readings were compared to a known concentration of lead using a standard SRM sheet provided by the XRF manufacturer to verify accurate performance of the instrument at the beginning and the conclusion of the sampling episode.

***PROJECT SITE: 741 H Street, Fresno, CA – Interior Areas***

Sampling of painted surfaces for suspect lead-based paint at referenced commercial space at the subject site included testing of sixteen (16) separate testing combinations. The XRF instrument was calibrated prior to and following the prescribed sampling period in accordance with the Performance Characteristic Sheet provided by the manufacturer. Calibration readings are included in the XRF sampling results as the initial and concluding readings and are designated as a “calibrate” reading. The calibration readings were compared to a known concentration of lead using a standard SRM sheet provided by the XRF manufacturer to verify accurate performance of the instrument at the beginning and the conclusion of the sampling episode.

***PROJECT SITE: 735, 739, & 741 H Street, Fresno, CA – Exterior Areas***

Sampling of painted surfaces for suspect lead-based paint at the referenced property included testing of thirteen (13) separate testing combinations. The XRF instrument was calibrated prior to and following the prescribed sampling period in accordance with the Performance Characteristic Sheet provided by the manufacturer. Calibration readings are included in the XRF sampling results as the initial and concluding readings and are designated as a “calibrate” reading. The calibration readings were compared to a known concentration of lead using a standard SRM sheet provided by the XRF manufacturer to verify accurate performance of the instrument at the beginning and the conclusion of the sampling episode.

## **SAMPLE METHODOLOGY**

Enclosed results are based on total lead content regardless of the number of paint layers present at each specific test location. Each referenced area includes data generated by the testing instrument. Lead content at a level equivalent to 5,000 ppm would be classified as “Lead-Based Paint” by HUD, The State of California, and the EPA. Each result must also be compared to the applicable OSHA level (“any detectable amount”, or 600 ppm), dependent upon the appropriate trigger activity. Sampling Equipment

Sampling was conducted using a *Niton Corporation* Spectrum Analyzer Lead Detector, Model XLp-300 (Serial No.15425). The instrument was utilized within the operating parameters established by *Niton Corporation* as indicated in the Performance Characteristic Sheet.

### Definition of Lead Based Paint

Title X	>1.0 mg/cm <sup>2</sup> or >0.5% by weight
HUD	1.0 mg/cm <sup>2</sup> or 0.5% by weight
CDPH	1.0 mg/cm <sup>2</sup> or > 0.5 % by weight
CPSC	600 ppm or .06% by weight
OSHA	600 ppm or .06% by weight or any detectable amount

(Note subtle differences dependent upon preceding mathematical symbols)

### APPLICABLE REGULATIONS FOR LEAD

The following includes the primary agencies which govern lead related work and a brief list of their components and responsibilities.

#### Occupational Safety and Health Administration

<b>Federal Standards</b>	General Industry Standard	29 CFR 1910.1025
	Construction Industry Standard	29 CFR Part 1926.62
<b>State Standards</b>	General Industry Standards	8 CCR 5216
	Construction Industry Standards	8 CCR 1532.1

The Occupational Safety and Health Administration (OSHA), is focused on protecting the health and safety of workers, including construction activities which disturb lead containing paints, surface coatings, and other materials. OSHA regulations for lead materials exist at both state (Cal-OSHA) and federal (Fed-OSHA) levels and are intended to protect workers from occupational exposures to these materials.

Federal and State lead regulations, including the Lead in Construction Standard 29 CFR 1926.62 (Federal Standard) and Title 8 CCR 1532.1, (California standard) regulate disturbance of lead containing materials during construction, demolition, and maintenance related activities. The Federal standard was adopted in May of 1993. The State of California adopted this standard in November 1993.

Appropriate engineering controls, personal protective equipment, training, specific work practices, and representative air sampling are required by both Cal/OSHA and OSHA whenever workers will disturb lead in any concentration (including less than 600 ppm) as this disturbance may result in airborne exposures over the Action Limit (AL) or Permissible Exposure Limit (PEL). Initial blood lead testing is required above the AL (30 ug/m;), and a written site specific “Compliance Plan” is required for all projects where a Negative Exposure Assessment has not been generated. Medical removal is required for any worker whose blood lead level > 50 ug/dl.

## **U.S. Environmental Protection Agency**

Title X was promulgated by the U.S. Congress in 1992 and required the U.S. Environmental Protection Agency (USEPA), to define lead hazards and to develop certification programs.

Major components of EPA pertaining to Lead Containing Materials

- Established a lab accreditation program
- Defined hazards in dust and soil (revised June 1998)
- Evaluates inspection & removal products (ongoing)
- Requires disclosure & information prior to sale/rental of pre-1978 housing (in effect)
- Mandate information for renovation /remodel work (in effect 6/99)
- Developed an accreditation and training program effective in states that do not have their own program California Environmental Protection Agency

Cal-EPA determines when lead paint waste is a hazardous waste in California, and how it must be disposed. The California Department of Toxic Substance Control (DTSC), as part of Cal-EPA oversees regulated disposal issues related to hazardous waste in California.

Procedures for the identification, management, transport, record keeping, and disposal of all types of hazardous waste are set forth in Title 22, CCR, Sections 66260.1-66263.12 and 66268.1-66268.124, and the Health and Safety Code, section 25163, subdivision (c).

## **Department of Housing and Urban Development (HUD)**

Developed regulations and guidance documents for use on HUD properties. Its Guidelines are generally considered state-of-the-art in the lead abatement industry. HUD guidelines establish strategies for completion of lead survey and risk assessments, clearance strategies, work practices, engineering controls and worker safety procedures.

While HUD guidance documents were developed specifically for HUD properties, both the California DHS work practice regulations and the EPA Model Accreditation Program for lead mandate you follow HUD Guideline procedures in many facilities.

HUD developed the following guidance documents which are industry standards:

- 1989 - published A Lead-based Paint: Interim Guidelines for Hazard Identification and Abatement in Public and Indian Housing, referred to as the “Old HUD Guidelines”.
- 1995 - published “Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing”.
- HUD is developing work practice regulations applicable to HUD housing which are to take effect sometime in 1999.

### California Department of Public Health (CDPH)

Developed and enforces a comprehensive regulation that provides an accreditation process for lead training providers, a certification program for individuals, and specified required work practices for lead hazard evaluations and lead hazard control work.

- Promulgated the California CDPH Lead Training, Accreditation, Certification and Work Practices - Title 17, CCR, Division 1, Chapter 8, (Sections 35000-361000). Specifies work practices involved in lead inspections, risk assessments and hazard reduction work in all residential and public buildings in California. Also requires training, passage of exams, and certification of individuals that conduct lead hazard assessments or work to reduce or eliminate lead hazards. Revised standard took effect on January 8, 1999.

Key Provisions: Defines “lead hazards” in dust, paint, and soil  
Defines almost all paint as “presumed” LBP  
Excludes post 1978 housing, and schools built after 1992  
Requires notifications to CDPH prior to disturbance of LBP  
Requires specific work practices (containment, clearance testing, etc.)  
Requires individuals to be “certified” for some work

CDPH Certification is required in the following cases:

- Exceed PEL in California (50 ug/m;) (Cal-OSHA)
- Conduct lead hazard evaluation or “abatement” (CDPH)
- Residential Inspections for EPA Disclosure Rule compliance
- Title X funded projects (U.S. Congress)
- California public elementary and preschools (Ed. Code Section 32243 b)
- When prescribed by project specifications.

#### CDPH Certification Classifications

#### Brief Description

Lead Related Inspector/Assessor	Conduct inspections or assessments for LBP
Lead Related Supervisor	Supervise lead project as Contractor
Lead Related Project Monitor	Monitor lead project on behalf of Client
Lead Related Project Designer	Design a lead abatement project
Lead Related Worker	Engage in lead related work as a worker

### OSHA Trigger Activities (Tasks):

**Fed OSHA, 29 CFR 1926.62**  
**Cal-OSHA, Title 8, CCR 1532.1**

Classify trigger tasks under three distinct activity groups which assume that you may reach specified airborne exposure levels. Those tasks presenting the least risk are designated Activity 1 tasks, with increasing risk potential for each successive class.

The three (3) trigger task categories and assumed airborne levels are as follows:

<b>Trigger Activity I</b> - (50 -500 ug/m <sup>3</sup> )	manual demolition, scraping and sanding, using heat guns, using HEPA equipment, debris cleanup
<b>Trigger Activity II</b> - (500 - 2500 ug/m <sup>3</sup> )	lead mortar, burning, rivet busting, use of non-HEPA equipment, dry abrasive blast cleanup
<b>Trigger Activity III</b> - (>2500 ug/m <sup>3</sup> )	welding, abrasive blasting, torch cutting, and burning

Prior to obtaining exposure assessment for each specific trigger task or if no historic data is available, the following apply:

- assume exposure over “PEL”
- wear respirators and protective clothing
- be properly trained per state and federal requirements
- have initial blood tests on affected workers, supervisors

Refer to **Appendix G** – “Regulatory Resource List” for specific information regarding trigger task activities and specific requirements.

### ANALYSIS OF FINDINGS – LEAD

In summary, the majority of testing combinations considered as part of our limited investigation were found to contain lead in some amount. Under current Cal/OSHA regulations, paint containing in excess of 0.06% lead (600 parts per million) are considered lead-containing paint for non-trigger tasks under Cal/OSHA. For trigger tasks, any detectable amount of lead invokes Cal/OSHA regulations and assumes that airborne levels may exceed the “Action Level” (AL) of 30 ug/m<sup>3</sup>, and the “Permissible Exposure Limit” (PEL) of 50 ug/m<sup>3</sup>. Refer to **Appendix G** for additional information regulatory requirements.

Current OSHA regulations require that workers involved in work disturbing lead containing surfaces be protected from exposure to lead above stipulated levels. Refer to the enclosed OSHA

Construction Standard (CCR Title 8 1532.1 California Lead-In-Construction Standard) for work guidelines and requirements.

***PROJECT SITE: 735 H Street, Fresno, CA – Interior Areas***

Of those testing combinations considered as part of our investigation, a total of thirty-two (32) were found to include lead in excess of the 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) and would be classified as “Lead-Based Paint” (LBP) under state and federal regulations. Refer to **Appendices B-D** for additional information concerning specific Testing Combinations.

Building materials represented by those testing combinations found to include lead in excess of 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) are classified as “Lead-Based Paint” (LBP) for the purposes of compliance with state and federal regulations. In addition, Cal/OSHA regulates all activities involving the disturbance of paint which includes “any detectable” amount of lead.

Any construction related work which will disturb building elements which include paint or surface coatings determined to include lead must be conducted in accordance with applicable local, state and federal regulations governing disturbance of lead. A lead waste characterization is required under state and federal requirements prior to disposing of lead-containing waste.

***PROJECT SITE: 739 H Street, Fresno, CA – Interior Areas***

Of those testing combinations considered as part of our investigation, a total of six (6) were found to include lead in excess of the 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) and would be classified as “Lead-Based Paint” (LBP) under state and federal regulations. Refer to **Appendices B-D** for additional information concerning specific Testing Combinations.

Building materials represented by those testing combinations found to include lead in excess of 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) are classified as “Lead-Based Paint” (LBP) for the purposes of compliance with the State of California, Department of Public Health. In addition, Cal/OSHA regulates all activities involving the disturbance of paint which includes “any detectable” amount of lead.

Any construction related work which will disturb building elements which include paint or surface coatings determined to include lead must be conducted in accordance with applicable local, state and federal regulations governing disturbance of lead. A lead waste characterization is required prior to disposing of ceramic tile, or the material must be disposed of as lead-containing waste.

**PROJECT SITE: 741 H Street, Fresno, CA – Interior Areas**

Of those testing combinations considered as part of our investigation, a total of nine (9) were found to include lead in excess of the 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) and would be classified as “Lead-Based Paint” (LBP) under state and federal regulations. Refer to **Appendices B-D** for additional information concerning specific Testing Combinations.

Building materials represented by those testing combinations found to include lead in excess of 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) are classified as “Lead-Based Paint” (LBP) for the purposes of compliance with the State of California, Department of Public Health. In addition, Cal/OSHA regulates all activities involving the disturbance of paint which includes “any detectable” amount of lead.

Any construction related work which will disturb building elements which include paint or surface coatings determined to include lead must be conducted in accordance with applicable local, state and federal regulations governing disturbance of lead. A lead waste characterization is required prior to disposing of ceramic tile, or the material must be disposed of as lead-containing waste.

**PROJECT SITE: 735, 739, & 741 H Street, Fresno, CA – Exterior**

Of those testing combinations considered as part of our investigation, a total of four (4) were found to include lead in excess of the 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) and would be classified as “Lead-Based Paint” (LBP) under state and federal regulations. Refer to **Appendices B-D** for additional information concerning specific Testing Combinations.

Building materials represented by those testing combinations found to include lead in excess of 1.0 mg/cm<sup>2</sup>, (0.5%), (5,000 ppm) are classified as “Lead-Based Paint” (LBP) for the purposes of compliance with the State of California, Department of Public Health. In addition, Cal/OSHA regulates all activities involving the disturbance of paint which includes “any detectable” amount of lead.

Any construction related work which will disturb building elements which include paint or surface coatings determined to include lead must be conducted in accordance with applicable local, state and federal regulations governing disturbance of lead. A lead waste characterization is required prior to disposing of ceramic tile, or the material must be disposed of as lead-containing waste.

## **PAINT CONDITION**

As part of the Lead-Based Paint Inspection, painted surfaces were visually examined for general condition. While this report does not constitute a lead “Risk Assessment”, painted surfaces were generally categorized as being in intact, fair, poor, or peeling condition.

Refer to the **Appendix G** for additional information concerning locations of testing combinations at the subject site.

## **ADDITIONAL CONSIDERATIONS**

Should a full evaluation of potential lead hazards be desired involving testing for lead contaminated dust and soil, we recommend that a “Risk Assessment” be conducted by a certified Lead-based paint Risk Assessor as part of a complete lead hazard evaluation.

Hazards associated with lead exposure are typically due to ingestion and inhalation of lead in the form of dust. Lead can be determined within the bloodstream, bones, and other organs by various detection methods.

Potential exposure to lead is associated with damaged painted surfaces. Painted surfaces should be inspected regularly and maintained in intact, undamaged condition to minimize the potential for the creation of lead dust hazards. Any evidence of peeling, loose or detached paint should be rectified by stabilizing the painted surface or replacing the painted element.

## **RECOMMENDATIONS**

Planned work operations, including demolition operations which involve the disturbance of “Lead-Containing Paint” must be conducted in compliance with applicable state and federal requirements. Prior to engaging in work which will disturb lead-containing finishes referenced herein, or other untested paints or surface coatings, the contractor engaged in the work must conduct an “Initial Exposure Assessment” for each planned “trigger task” in accordance with Cal/OSHA to determine potential lead exposures to workers. Prior to commencing such operations, the Contractor must assume workers will be exposed to airborne levels above the PEL and must provide workers with Hazard Communication Training, and personal protective equipment, including HEPA-equipped respirators. A hand-washing facility must be present at the worksite.

To reduce potential liability, the Owner may elect to have a certified lead professional conduct perimeter air monitoring on their behalf to provide documentation of airborne lead levels at locations around the site. The lead professional may also provide baseline and/or lead clearance monitoring.

Prior to Disposal of lead-based or lead-containing paint or elements which include lead-based or lead-containing paint, the State of California requires that representative sample(s) of each waste stream waste (along with the substrate where bonded) be submitted to an accredited laboratory and that a Total Threshold Limit Concentration (TTLC) test be performed to determine the total lead content. Dependent upon the result, an SW846 (STLC) may be required to determine the amount of leachable lead. These tests will determine transportation and disposal requirements and may greatly impact the ultimate cost of the work. Due to potential delays associated with conducting the analysis of the waste, it is recommended that the waste characterization be initiated prior to soliciting for bids for the work.

### LIMITATIONS

The enclosed asbestos and lead survey and review was limited to the referenced interior and exterior areas involving the specified commercial structure. This investigation is undertaken with the calculated risk that the presence, full nature, and extent of asbestos and lead-containing materials would not be revealed by visual observation and random sampling alone. T. Brooks & Associates, Inc. makes no representations as to the asbestos or lead content of materials which were not specifically tested or which were not readily accessible to the inspector.

At the request of the Client, the scope of sampling and testing was limited to those areas and painted finishes which may be impacted based on the proposed demolition operations. The enclosed findings and recommendations are not intended to represent materials at locations other than those specifically referenced.

Brooks & Associates is not responsible for failure of the Client and/or other design professionals or contractors working under their direction to completely review the enclosed report, as well as other referenced survey reports which include information which may impact operations involving those portions of the subject commercial structure to be impacted by their work.

Certain opinions and recommendations expressed in this report are based on our knowledge and experience with applicable state, federal and local law, and do not reflect other possible adverse conditions not immediately visible or which may be discovered by a more extensive examination including a review of relevant documents which were not available during this investigation.

Our inspection did not include sampling of materials which may contain materials known to be hazardous including polychlorinated biphenyls (PCB's), mercury, radon or other materials. Consideration should be given to testing for these and other hazardous materials which may be present.

Findings presented in this report were based on field observations, random sampling and analysis, review of available data and discussion with local regulatory and advisory agencies. Therefore, the data obtained are clear and accurate only to the degree implied by the sources and methods involved.

The information presented herewith was based on professional interpretation using presently accepted methods with a degree of conservation deemed proper as of the report date. It is not warranted that such data and/or methods cannot be superseded by future technical developments.

Respectfully Submitted,  
T. Brooks & Associates, Inc.,

Analyst - Kenneth Scheske

Signatory - Lab Director - Kurt Kettler

Distinctly stratified, easily separable layers of samples are analyzed as subsamples of the whole and are reported separately for each discernible layer. All analyses are derived from calibrated visual estimate and measured in area percent unless otherwise noted. The report applies to the standards or procedures identified and to the sample(s) tested. Analyst - Johann Hofer

  
Signatory - Lab Director - Kurt Kettler

Distinctly stratified, easily separable layers of samples are analyzed as subsamples of the whole and are reported separately for each discernible layer. All analyses are derived from calibrated visual estimate and measured in area percent unless otherwise noted. The report applies to the standards or procedures identified and to the sample(s) tested. The test results are not necessarily indicative or representative of the qualities of the lot from which the sample was taken or of apparently identical or similar products, nor do they represent an ongoing quality assurance program unless so noted. These reports are for the exclusive use of the addressed client and that they will not be reproduced wholly or in part for advertising or other purposes over our signature or in connection with our name without special written permission. The report shall not be reproduced except in full, without written approval by our laboratory. The samples not destroyed in testing are retained a maximum of thirty days. The laboratory measurement of uncertainty for the test method is approximately less than 1 by area percent. Accredited by the National Institute of Standards and Technology, Voluntary Laboratory Accreditation Program for selected test method for asbestos. The accreditation or any reports generated by this laboratory in no way constitutes or implies product certification, approval, or endorsement by the National Institute of Standards and Technology. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. Polarized Light Microscopy may not be consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials.

### COMPOSITE ANALYSIS REQUESTED; 400 Pt. POINT COUNT

Analyst - Kenneth Scheske

Signatory - Lab Director - Kurt Kettler

Distinctly stratified, easily separable layers of samples are analyzed as subsamples of the whole and are reported separately for each discernible layer. All analyses are derived from calibrated visual estimate and measured in area percent unless otherwise noted. The report applies to the standards or procedures identified and to the sample(s) tested. The test results are not necessarily indicative or representative of the qualities of the lot from which the sample was taken or of apparently identical or similar products, nor do they represent an ongoing quality assurance program unless so noted. These reports are for the exclusive use of the addressed client and that they will not be reproduced wholly or in part for advertising or other purposes over our signature or in connection with our name without special written permission. The report shall not be reproduced except in full, without written approval by our laboratory. The samples not destroyed in testing are retained a maximum of thirty days. The laboratory measurement of uncertainty for the test method is approximately less than 1 by area percent. Accredited by the National Institute of Standards and Technology, Voluntary Laboratory Accreditation Program for selected test method for asbestos. The accreditation or any reports generated by this laboratory in no way constitutes or implies product certification, approval, or endorsement by the National Institute of Standards and Technology. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. Polarized Light Microscopy may not be consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials.

Sharon or Diana:

Please provide composite point count analysis for the following:

Need results tomorrow (5/22/14)

Lab Report 0141214

Samples:

- 2-01
- 2-02
- 9-01
- 9-02
- 9-03
- 9-04
- 9-05

Thanks,

Troy

## COMPLIANCE ASSISTANCE BULLETIN

July 2006

### ASBESTOS REQUIREMENTS for DEMOLITION and RENOVATIONS

The San Joaquin Valley Air Pollution Control District (District) Rule 4002 requires compliance with the *National Emission Standards for Hazardous Air Pollutants* (NESHAP) regulation, 40 CFR, Part 61, Subpart M developed by the United States Environmental Protection Agency (EPA). The purpose of this bulletin is to provide an overview of the NESHAP notification, inspection and emission control requirements as they relate to asbestos.

#### SUMMARY

For any renovation or demolition of a regulated facility, you must do the following:

- **INSPECT:** Conduct a thorough asbestos inspection of the facility before:

Any renovation in which more than 160 square feet or more of building materials, or 260 linear feet or more of pipe insulation, will be disturbed at a regulated facility, or

Any demolition at a regulated facility. (See page 2 for the definition of demolition)

**Regulated facilities** (Facilities subject to the NESHAP) include all commercial building, residential buildings with more than four dwelling units, other structures and non-portable equipment. A single family dwelling or residential buildings with four or fewer units may be exempt, depending on its past use and future use of the property. The EPA has extensive policy on the NESHAP applicability to these structures. Contact the District to determine if your project is regulated.

- **ASBESTOS ABATEMENT:** If asbestos-containing material (ACM) is discovered, which will be disturbed during a renovation or demolition, they must be removed prior to those projects under most circumstances. Also, Cal-OSHA and Cal-EPA hazardous waste regulations apply in most cases.
- **NOTIFY:** Submit a complete asbestos notification form to the District for any regulated asbestos abatement project or demolition, 10 working days before the activity begins.

A *regulated asbestos abatement project* is one in which at least 160 Square feet of regulated asbestos-containing building materials (RACM) or 260 linear feet of asbestos-containing pipe insulation is disturbed.

*Regulated demolitions* are demolitions of "facilities" described above. Notification is required for any regulated demolition, whether or not asbestos is present.

- **FEES:** Pursuant to District Rule 3050, fees must be submitted to the District with all regulated renovations and demolitions notifications. Notifications received without the appropriate fee will be considered incomplete.

**DEMOLITION PERMIT RELEASE FORM:** Any demolition (regulated or not), for which a building department demolition permit is applicable, requires a completed Demolition Permit Release form. Building officials will require an approved copy of this form, signed by the District, prior to the issuance of a building department demolition permit.

### **SOME DEFINITIONS: 61.141**

1. **FACILITIES** - Facilities subject to the rule include “all structures, installations, buildings and equipment, except for a single family dwelling (SFD) or a residential building with more than four dwelling units. However SFD or building with four or fewer units is also subject to the regulation if:
  - a. It has been used for, or is being removed to be replaced by a non-residential use, or
  - b. It is to be used as a training burn exercise.
  - c. Sites with more than one such building remodeled or demolished are always regulated.
2. **DEMOLITION** - In addition to the total destruction of a structure, demolitions include “the removal of any structural load-bearing member from a facility together with any related handling operations or the intentional burning of a building” (training burns conducted by a fire fighting agency only). Also, the separation of a structure from its foundation prior to relocation is a demolition.
3. **RENOVATION** - means “altering a facility or one or more facility components in any way, including the stripping or removal RACM from a facility component.” Renovations include all activities in which asbestos could be disturbed at a regulated facility, including the clean up and removal of debris from buildings which have burned.
4. **NON-FRIABLE ACM**
  - a. **Category I non-friable** is “asbestos-containing packing, gaskets, resilient floor covering and asphalt roofing products containing more than 1 percent asbestos as determined by PLM testing that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.”
  - b. **Category II non-friable ACM** is “any ACM, excluding Category I ACM, containing more than 1 percent asbestos as determined by PLM testing, that when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.”
5. **RACM - include:**
  - a. **Friable ACM**, which is any material containing more than 1 percent asbestos, as determined by Polarized Light Microscopy (PLM) testing, which, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.
  - b. **Category I nonfriable ACM** that is in poor condition and “has become friable” or “that has or will be subjected to sanding, grinding, cutting, or abrading.”
  - c. **Category II nonfriable ACM** that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation.

**INSPECTION: 61.145 (a)**

**An asbestos inspection must be performed by the owner or operator prior to:**

- a. Any regulated demolition.
- b. Any renovation activity in which more than 160 square feet of building material or 260 linear feet of pipe insulation will be disturbed. An inspection is not necessary, however, if the material to be disturbed is stipulated to be asbestos containing and will be removed in accordance with the NESHAP.

Cal-OSHA regulations in the California Labor Code, 9021.5 through 9021.8, require that asbestos-consulting services (inspections) shall be performed by a person who is certified by Cal-OSHA, and who has taken and passed an EPA-approved Building Inspector course and performs the inspection according to the procedures outlined in the course.

**The District requires that inspection reports (surveys) must include:**

- a. A schematic showing the location of all tested materials.
- b. The following data for all asbestos-containing materials:
  - 1. The amount and description of each material.
  - 2. Percent asbestos content (10% and below must be point counted).
  - 3. Whether or not the material is friable.

**A report of the asbestos inspection (survey) must be received with each demolition notification.**

**NOTIFICATION 61.145 (b)**

**A hard copy of the asbestos notification must be submitted to the District, at least 10 working days prior to:**

- a. Any regulated demolition (see definitions of *demolition* and *facility* above).
- b. Any renovation in which more than 160 Square feet or 260 Linear feet of RACM will be disturbed.

The District notification form and instructions for filling it out are with the bulletin.

**Notifications will not be complete, nor will the 10 working day notice period begin, until all of the required information and fees have been submitted to the District.**

Notifications may be submitted by hand delivery, U.S mail or commercial courier. Facsimile ~~is~~ and e-mails are not acceptable methods of delivery.

## **ASBESTOS ABATEMENT: 61.145 (c)**

Asbestos-containing materials discovered during the inspection process, which will be disturbed during renovation or demolition, must be removed properly prior to the demolition or renovation. Employees engaged in asbestos abatement work must be properly trained and equipped for the work in accordance with Cal-OSHA regulations. The Cal-OSHA and NESHAP regulations have specific work practice requirements to be followed during the removal of these materials. Also, the NESHAP regulation and Cal-EPA have waste handling, transportation and disposal requirements applicable that must be adhered to.

### **SJVUAPCD Rule 3050 (Fees)**

A nonrefundable fee must be paid with each demolition and renovation notification, in accordance with SJVUAPCD Rule 3050, Asbestos Removal Fees, which is attached. Fees for asbestos abatement projects are based on the amount of RACM removed. If a project involves at least 160 square feet, 260 linear feet and/or 35 cubic feet or more of RACM, fees for each quantity of material are determined and added together to arrive at the total fee for the project.

The fee for a demolition notification is \$124.

### **DEMOLITION PERMIT RELEASE FORM**

CH & S Section 19827.5 requires city or county building officials to have proof of compliance with, or exemption from, the asbestos NESHAP notification requirements before they issues demolition permits. In order to facilitate this, the District has developed a Demolition Permit Release form (attached). For facilities subject to the NESHAP, the District will issue a Demolition Permit Release form once it has been properly noticed of the work that is to occur. *The Signed release form does not guarantee that asbestos abatement or demolition work is being done properly.* For all demolitions, including facilities exempt from the NESHAP, the applicant must fill out the Demolition Permit Release form and have it signed by the District before obtaining a building department demolition permit. The District allows facsimile transmittal of release forms.

### **RECYCLING/WASTE DISPOSAL**

In addition to waste disposal information about RACM, the asbestos notification must identify any building materials, which will be recycled after removal from a project. The name of the recycling contractor and location of such activity must be identified.

#### **No asbestos containing or asbestos contaminated material may be recycled.**

If you have any questions, we encourage you to contact one of our three regional offices.

**RULE 3050 ASBESTOS REMOVAL FEES** (Adopted May 21, 1992; Amended December 17, 1992; Amended February 18, 1993; Amended August 21, 1997; Amended January 17, 2008, effective July 1, 2009)

Note: This rule is effective on and after July 1, 2009.

**1.0 Applicability**

The National Emission Standards for Hazardous Air Pollutants (NESHAP), adopted by reference as District Rule 4002, and therefore these fees are applicable to:

- 1.1 all demolitions whether or not asbestos is present; and
- 1.2 renovations in which 260 linear feet, 160 square feet, or 35 cubic feet or more of regulated asbestos containing materials are disturbed.

**2.0 Fees**

Every person filing notification of an asbestos removal project, subject to the provisions of Rule 4002 (National Emissions Standards for Hazardous Air Pollutants), shall pay upon filing, the nonrefundable fee prescribed herein. The total fee for any project shall be the sum of the applicable fee components below.

Demolition or Renovation:

Linear Feet	Square Feet	Cubic Feet	Fee Component (\$)
0 - 259*	0 - 159*	0 - 34*	124
260 - 499	160 - 499	35 - 109	124
500 - 999	500 - 999	110 - 218	211
1,000 - 2,499	1,000 - 2,499	219 - 547	421
2,500 - 4,999	2,500 - 4,999	548 - 1,094	700
5,000 - 9,999	5,000 - 9,999	1,095 - 2,188	1,050
10,000 or more	10,000 or more	2,189 or more	1,400

\* Demolition only. Does not apply to renovations.

## ASBESTOS DEMOLITION/RENOVATION NOTIFICATION FORM GENERAL INFORMATION

The Asbestos NESHAP, 40 CFR Part 61, Subpart M, requires written notification of demolition or renovation operations under Section 61.145. The form below may be used to fulfill this requirement. Only complete notification forms are acceptable. Incomplete notification may result in enforcement action.

The notification must be postmarked or delivered no later than ten working days prior to the beginning of the asbestos removal activity (dates specified in section 7) or demolition (dates specified in Section 8). Please submit this form and corresponding fees to the appropriate office:

For Fresno, Madera and Kings Counties:

SJVUAPCD  
Attention: Asbestos Program  
1990 E. Gettysburg Avenue  
Fresno, California 93726

For San Joaquin, Stanislaus and Merced Counties:

SJVUAPCD  
Attention: Asbestos Program  
4800 Enterprise Way  
Modesto, CA 95356

For Tulare and Kern Counties:

SJVUAPCD  
Attention: Asbestos Program  
34946 Flyover Court  
Bakersfield, CA 93308

### INSTRUCTIONS

- Type of Notification:** Check Original if the notification is a first time or original notification; Revised (Dates) if the notification is a revision dates only; Revised (Others) if the notification is a revision of other data (highlight changes); Canceled if the project has been canceled; or "Courtesy" if the activity is not regulated. When submitting a revised notification add a number (starting with the number 1) after "revised" to differentiate between revisions.
- Type of Operation:** Check for facility demolition, ordered demolition, facility renovation, or Emergency renovations.
- Facility Description:** Provide detailed information on the areas being renovated or demolished. If applicable, provide the floor numbers and room numbers where renovations are to be conducted.  
  
Site Location: Provide information needed to locate the site in the event that the address alone is inadequate.  
  
Present Use/Prior Use/Future Use: Describe the primary use of the facility or enter the following: Hospital; School; Public Building; Office; Industrial; University or College; Ship; Commercial; Residence; or Subdivision.
- Is Asbestos Present?** Answer "Yes" or "No" regardless of the amount or type of asbestos.
- Include a complete asbestos report (survey) that accurately depicts amounts, percent, analytical method used
- Approximate Amount of Asbestos including:** (1) Regulated ACM to be removed (including non-friable ACM to be sanded, ground or abraded); (2) Category III ACM not removed; and for "courtesy notices" (3) Non-friable ACM to be removed. Enter amounts in square feet or linear feet. Describe volume in cubic feet only if the amount cannot be approximated in square feet or linear feet.
- Removal Dates (MM/DD/YY):** Enter scheduled dates for asbestos removal work. Asbestos removal work includes any activity, including site preparation, which will break up, dislodge or disturb asbestos material.
- Demo/Renovation Dates (MM/DD/YY):** Enter scheduled dates for beginning and ending the planned demolition or renovation.
- FACILITY OWNER INFORMATION:** Enter the name of the site supervisor and contact person for the notification. If additional parties share responsibility for the site, demolition activity, renovations or ACM removal, include complete information (including name, address, contact person and telephone number) below.
- Removal Contractor:** Contractor hired to remove asbestos.
- Other Contractor:** Demolition contractor, general contractor, or any other person, who leases, operates, controls or supervises the site.

12. Description of Planned Demolition or Renovation Work and Method(s) to be Used: Include in this area a description of the demolition and renovation techniques to be used and the types of facility components and materials which will be affected by this work.
13. Description of Engineering Controls and Work Practices to be Used to Prevent Emissions at the Site: Describe the work practices and engineering controls selected to ensure compliance with the requirements of the regulations, including both asbestos removal and waste-handling emission control procedures.
14. ACWM Transporter(s): Enter the names, addresses, contact persons and telephone numbers of the persons or companies responsible for transporting ACM from the removal site to the waste disposal site. If the removal contractor or owner is the waste transporter, state "same as owner" or "same as removal contractor." If additional parties are responsible include complete information on an additional sheet submitted with the form.
15. ACWM Disposal Site: Identify the waste disposal site, including the complete name, location and telephone number of the facility. If ACM is to be disposed of at more than one site, provide complete information on an additional sheet submitted with the form.
16. Recycling of Waste Material (No ACM may be recycled): Identify the site, including the complete name, location and telephone number of the facility, where any material is to be taken for recycling.
17. If Demolition Ordered by a Government Agency, Please Identify the Agency: Provide the name of the responsible official, title and agency, authority under which the order was issued, the dates of the order and the dates of the ordered demolition. A copy of the order shall be attached to the notification.
18. For Emergency Renovation: Provide the date and time of the emergency, a description of the event and a description of unsafe conditions, equipment damage or financial burden resulting from the event. The information should be detailed enough to evaluate whether a renovation falls within the emergency exception.
19. Description of Procedures to be Followed in the Event that Unexpected Asbestos is Found or Previously Nonfriable Asbestos Material Becomes Crumbled, Pulverized, or Reduced to Powder: provide adequate information to demonstrate that appropriate actions have been considered and can be implemented to control asbestos emissions adequately, including at a minimum, conformance with applicable work practice standards.
20. Certification of Presence of Trained Supervisor: The notifier must certify that a person trained in asbestos-removal procedures will supervise the demolition or renovation. The supervisor is responsible for the activity on-site. Evidence that the supervisor has completed the training must be available for inspection during normal business hours.
21. Verification: Please certify the accuracy and completeness of the information provided by signing and dating the notification form.

*Category I non-friable asbestos-containing material (ACM)* means asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos.

*Category II non-friable ACM* means any material, excluding Category I non-friable ACM, containing more than 1 percent asbestos.

*Regulated asbestos-containing material (RACM)* means (a) Friable asbestos material, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart.

## RENOVATION PERMIT RELEASE

District Rule 4002 adopts the National Emission Standards for Hazardous Air Pollutants (NESHAP) asbestos regulation. This rule requires that subject facilities be inspected for asbestos prior to remodeling. Regulated asbestos-containing materials (RACM) must be removed prior to remodeling work. Furthermore, a signed **Demolition** Permit Release form is required prior to obtaining a building department demolition permit.

## **Appendix G**

# **Regulatory Resource List For Asbestos & Lead Regulations**

## REGULATORY RESOURCE LIST – ASBESTOS

### California Occupational Safety & Health Administration (Cal/OSHA): 8 CCR 1529 Asbestos in Construction Standard

Websites: <http://www.dir.ca.gov/title8/1529.html> (Regulation)  
<http://www.dir.ca.gov/dosh/ACRU/ACRUhome.html> (Report of Use)

#### Summary of Regulation:

1. Regulates Friable and Non-Friable ACBMs which contain asbestos in excess of 0.1% by weight.
2. Applicable to workers engaged in disturbance of ACBM (>1.0%) and ACCM (0.1 - 1.0%) and workers in close proximity to the work area.
3. Contractors who disturb in excess of 100 sq. ft. must be a “Certified Abatement Contractor” with the State of California Contractors State License Board and have an ASB attachment on their license with the exception of flooring, roofing, and asbestos-cement products.
4. Contractors that disturb less than 100 sq. ft. must also file a “Report of Use” with the State of California.
5. Contractors who disturb any amount of ACBM must ensure worker protection by providing accredited training, medical surveillance, PPE and a negative exposure assessment.
6. All work must be conducted in accordance with the regulation.

### NESHAP Regulation – United States Environmental Protection Agency: 40 CFR Part 6, Subpart M- National Emission Standard for Asbestos

Website: <http://www.epa.gov/asbestos/pubs/asbreg.html>

#### Summary of Regulation:

1. Regulates renovation projects on all commercial structures, certain residential properties, and multi-family properties with four (4) or more units.
2. Has jurisdiction over projects involving disturbance of greater than 160 sq. ft. or 260 lin. ft. of ACBM (>1.0%) or “Presumed Asbestos-Containing Material.”
3. Regulates all demolition, regardless of whether asbestos is present on targeted structures.
4. Enforced by local air quality management district or EPA region office in non-delegated districts.

### San Joaquin Valley Air Pollution Control District

Website: <http://www.valleyair.org/busind/comply/asbestosbultn.htm>

#### Summary of Regulation:

1. Enforces NESHAP regulation.
2. Requires filing of completed notification, payment of fees, and ten (10) day waiting-period prior to commencing abatement related work in excess of threshold levels of RACM, non-friable ACBM which may become friable, and for all demolition activities.
3. Requires that an asbestos survey be conducted and prepared by a Certified Asbestos Consultant and that a copy be submitted to the air district along with the completed notification.

## REGULATORY RESOURCE LIST – LEAD

### California Occupational Safety & Health Administration (Cal/OSHA): 8 CCR 1532.1 (Lead in Construction Standard)

Website: [http://www.dir.ca.gov/title8/1532\\_1.html](http://www.dir.ca.gov/title8/1532_1.html)

#### Summary of Regulation:

1. Regulates all work-related activities in which workers may be exposed to lead and any workers in close proximity to the work area.
2. Regulated levels of lead are based on level of training and experience of contractor and maintenance of historical data based on initial exposure assessments for individual “trigger tasks”.
3. Contractors that disturb in excess of 100 sq. ft. must file a “Temporary Jobsite Notification” with the local Cal/OSHA Compliance Office at least 24 hours prior to start of work.
4. Contractor shall be licensed with the State of California, Contractors State License Board and have provided all employees who will engage in the work or enter a lead “regulated area” with level of training commensurate with anticipated exposure level.
5. Employees are required under certain circumstances to be certified by the State of California Department of Public Health (CDPH) to conduct lead work.
6. The employer or contractor must send notification prior to the start of the job unless:
  - the lead content of the material disturbed is less than 0.5 percent, (5,000 parts per million) or 1.0 mg./cm<sup>2</sup>;
  - the amount of lead-containing material is less than 100 square feet or 100 linear feet;
  - the only task is torch cutting or welding for no longer than one hour per shift.
7. Contractors who disturb any amount of lead must ensure worker protection by providing accredited training, medical surveillance, PPE and conduct an initial exposure assessment per “trigger task”.
8. Employers are required to conduct biological monitoring on employees based on the schedule mandated by OSHA.

### State of California – Department of Public Health – Title 17, Division 1, Chapter 8

Website: <http://www.cdph.ca.gov/programs/CLPPB/Documents/Title17.pdf>

#### Summary of Regulation:

1. Regulates projects involving disturbance of “Lead-Based Paint” on public and residential structures.
2. If conducting “Abatement”, defined as work designed to reduce or eliminate lead hazards, only CDPH accredited workers and supervisor may conduct the work, and a completed 8551 form shall be filed with CDPH a minimum of five (5) days prior to commencing abatement operations.
3. For work classified as “Abatement”, a Lead Clearance is required. Standard includes a minimum standard for performance of work and states that all lead related work shall be conducted in accordance with the HUD Guidelines.

## HUD Guidelines

Website:

[http://portal.hud.gov/hudportal/HUD?src=/program\\_offices/healthy\\_homes/lbp/hudguidelines](http://portal.hud.gov/hudportal/HUD?src=/program_offices/healthy_homes/lbp/hudguidelines)

A standard developed by the Department of Housing and Urban Development which has generally been adopted as “state of the art” in the lead industry. This standard has been adopted by the State of California as a regulatory requirement.

## U.S. Environmental Protection Agency

### Repair, Renovation & Painting Rule

Website: [www.epa.gov/lead/pubs/renovation.htm](http://www.epa.gov/lead/pubs/renovation.htm)

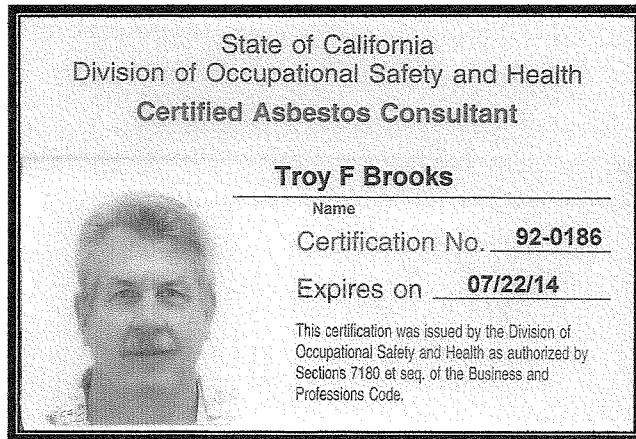

#### Summary of Regulation:

1. Regulates all contractors that engage in work involving disturbance of lead in pre-1978 residential housing and child-occupied facilities.
2. Requires that painted finishes to be impacted by proposed scope of work must be tested to determine if they are classified as “Lead-Based Paint” or presumed as such.
3. Requires that contractors utilize lead safe work practices.
4. In California, only a CDPH certified Inspector/Assessor may test for the presence of Lead-Based Paint.
5. Contractors must provide a copy of the “Renovate Right” pamphlet to owners or occupants of properties prior to commencing work which falls under the regulation.
6. Each job regulated under the RRP requires at least one RRP Certified Renovator be present on any job which falls under the regulation. In addition, each firm must also be RRP certified.
7. Regulation allows contractors to conduct their own clearance test known as a “Cleaning Verification”.
8. The homeowner may elect to hire a ‘third-party’ consultant to conduct clearance testing on their behalf.

SUMMARY

# 1. EXECUTIVE SUMMARY

TAM

Temple Andersen Moore LLP has been retained by the City of Fresno to Evaluate the property located at 735 H Street, including the existing warehouse building, to give information to the City for the possibility of concerting the property to a farmer's market. The evaluation shall include the site visits, field investigations, studies, and property analysis to identify issues and solutions for the conversion. Consultant shall provide Phase One Documents, Site Survey, Hazardous Materials survey, Predesign Structural, Predesign Mechanical, Predesign Electrical, and Predesign Architectural services to identify the needs for demolition, rehabilitation and/or construction. The Predesign services shall include cost analysis and estimate to best identify the route to convert the property into a farmer's market and provide renderings of proposed project.

Phase One Environmental Site Assessment has revealed no evidence of Recognized Environmental Conditions in connection with the Property Except for a few exceptions. (Refer to attached report) The Hazardous Material Report has revealed that there are several materials that contain asbestos. (Refer to attached report) The Structural Assessment Report has revealed that there are numerous conditions that indicate that this structure would be considered extremely 'unsafe' and at 'high risk' of collapse in the event of a minor to moderate seismic event. Significant measures would need to be taken to render the structure safe for occupancy. (Refer to attached report).

After review of the structural assessment and discussions with the City it was determined that the City was looking at demolishing the building, removing debris and grading the site. Attached is an opinion of probable cost for the demolition and grading the site. Also attached is a proposal for creating the documents for bidding out the demolition work.

## Executive Summary

- ◆ This Phase I Environmental Site Assessment Report has been prepared for TAM+CZ Architects for the 735 H Street project property (APN 467-040-23ST) located south of H Street between Inyo St and Mono St in Fresno, California (Figure 1).
- ◆ The property is and has historically been occupied by a commercial building since at least 1918.
- ◆ The Property is listed on environmental database US Brownfield. The City of Fresno Redevelopment Agency received a US Brownfield Grant in 2014 for a Phase I Environmental Site Assessment for APNs 467-040-20ST, -22ST, and 23ST. The Phase I report or Lead Based Paint and Asbestos Containing Materials Report were not available to review during the preparation of this report.
- ◆ Site reconnaissance was conducted on December 7, 2021.
- ◆ Interview questionnaires were not returned during the preparation of this report.
- ◆ Provost & Pritchard has performed this ESA in general conformance with the scope and limitations of ASTM E 1527-13. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) in connection with the Property except for the following:
  - Based on the age of the building and a previous investigation for Lead Based Paint and Asbestos Containing Materials in 2014, an updated investigation report should be completed.
  - Several generations of fluorescent lighting fixtures are present. Some blasts may contain PCB's and should be evaluated and disposed in accordance with State regulations
- ◆ In addition, non-scope considerations that do not meet the ASTM definition of a REC include:
  - The elevator appears to be in good condition considering the age, the motor and pump did not appear to have obvious leaks but the base of the elevator was not visible for observations to evaluate if the apparatus including pistons had leaked.

# 1 Introduction

## 1.1 Purpose

This Phase I Environmental Site Assessment Report (ESA) has been prepared for TAM+CZ Architects (Client) for the 735 H Street project property (Property), located near Mono ST, H Street, and Inyo Street (Figure 1 Appendix A). The Property has Fresno County assessor's parcel number 467-040-23ST. This ESA was performed in accordance with the scope and limitations of the American Society of Testing and Materials (ASTM) Standard Practice for Phase 1 Environmental Site Assessment Process E1527-13. This ESA was conducted to document the general environmental condition. The ESA was limited to the area identified on Figure 2 in Appendix A.

The objective of this ESA is to assist the client in understanding recognized environmental conditions associated with the site's past and current use. Recognized Environmental Condition (REC) is defined as "the presence or likely presence of hazardous substances or petroleum products under conditions that indicate a release into structures on the property or into the ground, groundwater or surface water of the property."

Historical Recognized Environmental Conditions (HREC) are defined by the ASTM Standard Practice E1527-13 as an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently.

Business Environmental Risks (BER) include risks which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the subject property, not necessarily limited to those environmental issues required to be investigated in the standard ASTM scope. BERs may affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

In addition, this ESA has also noted the presence of housekeeping and other conditions which ASTM identifies as "non-scope considerations" that may create a BER as defined above. Housekeeping conditions, a type of a BER, are generally considered de minimis conditions that in general do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of government agencies but could require regulatory permitting.

## 1.2 Detailed Scope of Services

The ESA process consisted of:

- a. A review and evaluation of state and federal (i.e., U.S. EPA) environmental databases that list sites of potential impact within specified search distances;
- b. A review and evaluation of reasonably ascertainable local agency records and environmental databases for historical and current documentation pertaining to the site;
- c. A review and evaluation of historical use information, including aerial photographs and maps (e.g., USGS, fire insurance, etc.), tax improvement records, city directories, and building department permit records;
- d. Interviews with clients and government officials, as appropriate;
- e. Site reconnaissance to determine current and past uses and conditions of both the property and adjoining properties;
- f. Preparation of a report detailing findings, and conclusions generated from components 'a' through 'd'.

## 1.3 Common Acronyms

APN: Assessor's parcel number  
AST: Above-ground storage tank

ASTM:	American Society for Testing and Materials
CUPA:	Certified Unified Program Agency
DTSC:	California Department of Toxic Substance Control
DWR:	California Department of Water Resources
EDR:	Environmental Data Resources Inc.
EPA:	United States Environmental Protection Agency
ESA:	Environmental site assessment
P&P:	Provost & Pritchard Consulting Group
REC:	Recognized environmental condition
RWQCB:	Regional Water Quality Control Board
USDA:	United States Department of Agriculture
USGS:	United States Geological Survey
UST:	Underground storage tank

## 1.4 Significant Assumptions and Exceptions

The ESA is designed in principle to be a cost-effective overview of a site, which should identify indications of RECs that are observable, or recorded in readily available public records. Evaluation of the Property is limited to information available through public sources, interviews, and firsthand observation. Judgments leading to opinions and recommendations are made without a complete knowledge of subsurface conditions. Findings and recommendations are made in review of information that was prepared or provided by others. This report assumed that the information provided is accurate and correct. P&P assumes that cases closed by regulatory agencies do not continue to represent a threat of groundwater impacts or vapor migration or intrusion. Additional research beyond that required by ASTM E1527-13 may yield additional information.

## 1.5 Limitations

Land use, site conditions (both onsite and offsite) and other factors will change over time. Since site activities and regulations could change at any time after the completion of this report, the observations, findings, and opinions can be considered valid only as of the date of the site visit.

P&P's professional services were performed consistent with generally accepted environmental principles and practices in California at the time the services were performed. Judgments leading to conclusions and recommendations are made without a complete knowledge of subsurface conditions.

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of the practice outlined in ASTM E1527-13 is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

Therefore, no warranty or guarantee is expressed or implied.

## 1.6 User Reliance

This report has been prepared for the sole benefit of TAM+CZ Architects and City of Fresno. Any other person or entity without the express written consent of Provost & Pritchard Consulting Group and/or TAM+CZ Architects and City of Fresno may not rely upon this report.

## 1.7 Site Description

The site description includes information that identifies the physical setting of the site in relation to the surrounding area. Table 1 describes the General Site Characteristics including:

- Site and physical setting
- Descriptions of roads, structures, other improvements
- Current uses of the adjoining properties
- Location of the site and maps included in Appendix A

Table 1. General Site Characteristics

<b>ADDRESS &amp; ASSESSOR'S PARCEL NUMBER</b>	735, 739, 741 H Street, Fresno. 467-040-23ST See Appendix B.
<b>APPROXIMATE SIZE</b>	The project Property is approximately 0.54 acres.
<b>LOCATION</b>	The Property is located primarily within H Street, Mono St, G St, and Inyo St.
<b>ZONING</b>	M-1 Light Manufacturing District
<b>BUSINESS TYPE &amp; YEARS OF OPERATION</b>	Commercial building since 1918.
<b>PRIOR LAND USE</b>	Land use prior to 1918 is unknown.
<b>LEGAL DESCRIPTION</b>	The Property is described as portions of Section 10 in Township 14 South, Range 20 East, Mount Diablo Base and Meridian in the County of Fresno.
<b>ROADS</b>	G Street borders the south end of the property, Inyo Street to the western boundary, H Street to the northern boundary and Mono Street to the eastern boundary.
<b>STRUCTURES</b>	The single story brick and concrete structure with two basements has been on the property since at least 1918. Various businesses have occupied the building since its construction. .
<b>CURRENT USES OF ADJOINING PROPERTIES</b>	
<b>NORTH</b>	Various industrial warehouses, H Street
<b>WEST</b>	Chukchansi Park and parking lot, Inyo Street
<b>EAST</b>	Smart & Final, Mono Street
<b>SOUTH</b>	Southern Pacific Railroad, G Street.

## 2 User Provided Information

### 2.1 Title Records

The Property parcel is owned by City of Fresno. See Appendix B.

### 2.2 Environmental Liens or Activity and Use Limitations

No environmental liens or other activity and use limitations (AULs) were reported in the EDR Environmental Lien and AUL Search. See Appendix C.

### 2.3 Specialized Knowledge

User questionnaires were not returned during the preparation of this report.

### 2.4 Valuation Reduction for Environmental Issues

Not applicable.

### 2.5 Owners, Property Manager, and Occupant Information

There is no property manager.

## 2.6 Reasons for Performing ESA

This ESA was conducted to assist City of Fresno with portions of its due diligence prior to undertaking a repurposing of the structure.

## 3 Records Review

### 3.1 Standard Environmental Records Sources

Federal, state, and local regulatory agencies databases lists were available for review. The purpose of the records review is to obtain and review records that would help to identify recognized environmental conditions in connection with the Property. Provost & Pritchard contracted with a commercial database service, Environmental Data Resources (EDR), to review the regulatory agency lists for reference to the Property and any listings within the appropriate ASTM minimum search distance from the site. The federal and state databases reviewed are listed below with a brief description of the potential environmental risk, if applicable. A copy of the EDR report is included in Appendix C.

The following federal and state databases were reviewed for assessment. The respective search distances are included in the EDR Radius Map Report in the Map Findings Summary.

#### 3.1.1 Federal and State Databases

- National Priority List (NPL), Proposed NPL, and NPL LIENS
- Delisted NPL Site List
- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), Federal Facility
- CERCLIS No Further Action (CERCLIS-NFRAP)
- Corrective Action Report (CORRACTS)
- Resource Conservation and Recovery Act Information (RCRA) TSDf- RCRA small and large generators
- Federal Institutional Controls/Engineering Controls Registry
- Emergency Response Notification System (ERNS),
- State and Tribal NPL Equivalent-(RESPONSE)
- State and Tribal CERCLIS Equivalent (ENVIROSTOR)
- State and Tribal Landfill or Solid Waste Disposal Site (SWF/LF)
- State and Tribal leaking storage tanks (LUST, SLIC, and INDIAN LUST)
- State and Tribal registered storage tank list (UST, AST, INDIAN UST, FEMA UST)
- State and Tribal Voluntary Cleanup Sites (INDIAN VCP, VCP)
- State Hazardous Waste Information System (HAZNET)
- California Drug Laboratory (CDL)

#### 3.1.2 Database Findings

The Property is listed on the state or federal databases searched by EDR for the US Brownfields database. The City of Fresno Redevelopment Agency received a US Brownfield Grant in 2014 for a Phase I Environmental Site Assessment for APNs 467-040-20ST, -22ST, and 23ST. The Phase I report or Lead Based Paint and Asbestos Containing Materials Report were not available to review during the preparation of this report.

The EDR Radius Map Report states based on the date of construction, the 2014 Phase I ESA requested an asbestos and lead-based paint survey from a private subcontractor, T. Brooks and Associates of Clovis, California, for the warehouse located on parcel APN 467-04-23ST (aka 735, 739, 741 H Street). The methodology and results of the survey are presented under separate cover and entitled Asbestos

Survey & Lead-Based Paint Inspection Report, Commercial Structure 735, 739, & 741 H Street, Fresno, California, dated May 28, 2014. The survey concluded, in part, that 20 samples collected by Brooks for analysis included one or more samples which tested positive for asbestos in amounts greater than 1.0 percent. The samples testing positive included drywall taping mud and texture, drywall texture, wall paneling, 9-inch x 9-inch vinyl floor tile and associated mastic, and vibration damper. The survey concluded, in part, that the majority of testing combinations considered as part of Brooks' investigation were found to contain lead in some amount. A total of 47 testing combinations on the interior surfaces and 4 exterior surfaces were found to include lead in excess of 1.0 milligrams per square centimeter (mg/cm<sup>2</sup>)(0.5), (5,000 parts per million) and would be classified as Lead-Based Paint (LBP) under state and federal regulations. Former Use: Based on a review of historical documents, parcel APN -20ST has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST and -23ST. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885.

### 3.1.3 Fresno County Assessor's Office (Appendix B)

Information for the Fresno County assessor parcel number (APNs) on the Property are shown in property details from ParcelQuest and tax assessors maps included in Appendix B.

### 3.1.4 Vapor Encroachment Screen (Appendix C)

The EDR Vapor Encroachment Screen was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property involved in Real Estate Transactions (E-2600-10). A Vapor Encroachment Screen was prepared using EDR's Vapor Encroachment Worksheet and is included in Appendix C. The Screen indicates that vapor encroachment conditions (VECs) do not exist for the Property. This is based on the presence or absence of hazardous substances, proximity to the Property, groundwater flow, and geologic barriers or pathways. Given there are no hazardous substances identified in the search radius by EDR, the no VEC results seems reasonable.

No vapor encroachment screen can wholly eliminate uncertainty regarding VECs. Screening is intended to reduce, but not eliminate, uncertainty regarding whether a VEC exists in connection with a property. Further, findings regarding VECs do not determine whether a REC is or is not present.

### 3.1.5 CalEPA nSite

The California Environmental Protection Agency (CalEPA) maintains a data warehouse system (nSite) for the California Enviroview program. This data warehouse combines and merges facility and site information from: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

### 3.1.6 Fresno County Certified Unified Program Agency (Appendix D)

The Unified Program regulates hazardous waste and hazardous materials by ensuring consistency throughout the state regarding the implementation of administrative requirements, permits, inspections, and enforcement at the local regulatory level. CalEPA oversees the statewide implementation of the Unified Program and its 81 certified local agencies, known as Certified Unified Program Agencies (CUPAs), which apply regulatory standards established by State agencies. The CUPA for the County of Fresno is the Environmental Health Services Division. Records were reviewed from the CalARP facilities in Fresno County and the Property was not listed.

### 3.1.7 Building Department Records (Appendix E)

No building permits were found for the Property in the EDR Building Permit Report. Historic aerial photographs and topographic maps indicate the building has been onsite since at least 1918.

### 3.1.8 California Geologic Energy Management Division (Appendix F)

The State of California Geologic Energy Management Division (CalGEM, formerly DOGGR) maintains the Well Finder web site with maps showing the locations of oil and gas wells the department has records of. A review of the oil and gas maps contains no records of oil or gas wells drilled in the area of the Property.

### 3.1.9 Department of Toxic Substances Control (Appendix G)

EnviroStor is the Department of Toxic Substances Control's (DTSC) data management system for tracking our cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further. A review of the EnviroStor website indicates that no records exist for this Property.

### 3.1.10 Regional Water Quality Control Board (Appendix H)

GeoTracker is the California State Water Resources Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. GeoTracker portals retrieve records and view integrated data sets from multiple State Water Board programs and other agencies. A review of the GeoTracker website indicates that no records exist for this Property.

### 3.1.11 San Joaquin Valley Air Pollution Control District (Appendix I)

Records were requested from the San Joaquin Valley Air Pollution Control District. No records were found for the Property.

## 3.2 Physical Setting

The geologic and hydrologic conditions beneath the Property were researched to evaluate whether hazardous substances are likely to migrate into groundwater or soil beneath the site, either from on or off-site sources.

### 3.2.1 Geological Conditions

The site is located in the San Joaquin Valley. The valley is underlain generally by sedimentary deposits of silt, sand, and gravel. The valley is bordered on the east by the Sierra Nevada Mountains whose altitude ranges from less than 1,000 feet in the foothills to more than 14,000 feet above sea level near the crest of the range. The Coast Ranges, bordering the valley on the west, consist of a series of folded and faulted marine and volcanic rocks which rise to about 6,000 feet above sea level (Croft and Gordon, 1968).

The geomorphic province is known as the Great Valley, or Central Valley. The Sacramento Valley makes up the northern third and the San Joaquin Valley makes up the southern two thirds of the geomorphic province. Both valleys are watered by large rivers flowing west from the Sierra Nevada Range, with smaller tributaries flowing east from the Coast Ranges. Gently rolling plains and hills rise from the valley floor along the borders with the surrounding mountainous provinces (Harden, 1998).

Most of the surface of the Great Valley is covered by Quaternary alluvium. Sediments eroded from the Sierra Nevada and Coast Ranges are deposited on the floodplains and bottomlands of the flat-bottomed valley. In the central, lower parts of the Great Valley, young Cenozoic alluvium is underlain by an incredible thickness of older sediments and sedimentary rocks. The basin is deeper on the western side of the valley, where it is filled by as much as 20,000 meters of sediment. Along the eastern margin of the basin, the sedimentary formations are steeply upturned due to the uplifted Sierra Nevada Range (Harden, 1998).

### 3.2.2 Hydrogeology

The Property is within the boundary of the Kings Subbasin of the San Joaquin Valley Groundwater Basin. The Kings Subbasin is drained by the San Joaquin River and its tributaries and is recharged by river and stream seepage, deep percolation of irrigation water, canal seepage, and intentional recharge (DWR, 2003). Groundwater in the subbasin generally flows southwest (DWR, 2003).

The estimated depth to groundwater at the Property is between 90 to 100 feet below the ground surface (bgs) based on the California Department of Water Resources (DWR) Fall 2018 measurements in the area. See map in Appendix J.

### 3.2.3 USDA Soil Survey

The USDA Soil Survey Map indicates that the site's soils are primarily composed of Delhi Loamy sand. This soil type generally has high infiltration rates and tend to be deep, well drained to excessively drained sands and gravels. A soils map and description of the units is included in the GeoCheck section of the EDR Radius Map Report in Appendix C.

## 3.3 Historical Use Information

History of the previous use of the property and surrounding area was researched in order to help identify the likelihood of past uses that may have resulted in RECs in connection with the Property. The following standard historical sources were reviewed to identify past use back to at least 1940, or when first developed.

### 3.3.1 Aerial Photographs (Appendix K)

Years reviewed: 1937, 1942, 1946, 1950, 1957, 1962, 1967, 1973, 1979, 1984, 1987, 1998, 2006, 2009, 2012, 2016

In the aerial photo from 1937 the Property appears to be in the same configuration as currently. The railroad spur in adjacent to the southwest. The railroad appears active through at least 1967. The northwest portion of the building is no longer present after 1987. The area directly southwest of the property has been converted to a parking lot in 2006. Chukchansi Park, a baseball and multi-use stadium, appears visible directly to the north in 2006.

### 3.3.2 Topographic Maps (Appendix L)

USGS 7.5-minute topographic maps of the Fresno North and Fresno South quadrangle from 1923, 1942, 1946, 1963, 1972, 1981 and 2012 were reviewed for the Property and surrounding area.

The Property is relatively flat. The building is developed in the same configuration in 1923 as currently. The railroad tracks and spurs are directly adjacent to the property in 1923 until 1981. Minimal changes occur surrounding the property through the years.

The surrounding property is developed as a downtown area in 1923.

### 3.3.3 City Directories (Appendix C)

The EDR-City Directory Image Report provided directory listings for years 1927, 1932, 1958, 1965, 1970, 1975, 1980, 1986, 1990 and 2004. The Property address is listed in 1927-1932 as Johns Manville Inc (roofing materials), in 1958 as Zellerbach Co Warehouse, in 1965-1970 as Butler Johnson Corp Fresno Wholesale Floor Covering, 1975-1990 as Slater Furniture Co Warehouse, 2004 as unknown.

Other addresses for the building could include 739 and 741 H Street. 739 H Street was listed as vacant in 1952 and 1937-1942 as California Spray Chemical. 741 H Street was listed as Armour & Co Wholesale Meats from 1927-1942, United Fairway Produce Co in 1947, and Brentwood Egg Co from 1952-1958.

### 3.3.4 Sanborn Fire Insurance Maps (Appendix C)

Sanborn Fire Insurance Maps are available for the Property in 1885, 1888, 1898, 1906, 1918, 1948, 1950, and 1970. The property is vacant from 1885 through 1906. In 1906 the property is Madary's Lumber Yard. The existing building is occupying the property in 1918 as wholesale produce, plumbing supplies storage and Valley Lumber Company Office. In 1948 the property is listed a produce wholesale and Valley Lumber Company. In 1950, the property is egg wholesale and Valley Lumber Company. In 1970, the property is listed as wholesale florist supplies.

### 3.4 Historical Use Information on Adjoining Properties

Based on aerial imagery, topographic maps, city directory listings, and database listings reviewed, properties adjoining and surrounding the subject Property have historically been primarily industrial and commercial.

## 4 Site Reconnaissance

### 4.1 Methodology and Limiting Conditions

A City of Fresno staff escorted site reconnaissance was conducted on December 7, 2021 by Stephanie Gillaspay and David Norman of Provost & Pritchard Consulting Group to document the physical setting of the site, verify information obtained from the agency records (if available), and obtain site-specific information where no records were available. The objective of a site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the subject property.

Table 2 lists the observations noted during the site reconnaissance. The photographs of the Property are in Appendix A.

### 4.2 General Site Setting

Table 2 Site Observations

Checked	Observations	Remarks
√	Property boundaries	Approximate Property boundaries are roads.
√	Location and boundaries of onsite operations (present and past)	The property is surrounded by roads and parking lots.
√	Foundations of former structures	None observed.
√	Underground storage tanks	None observed.
√	Aboveground storage tanks	None observed.
√	Storage areas (including empty drum storage)	Two unknown use 55 gallon plastic drums in the basement.
√	Odors	None observed.
√	Pools of liquids (including standing surface water)	None observed.
√	Electrical or hydraulic equipment suspected to contain PCBs	Many generations of florescent lighting is present and ballasts should be evaluated for PCBs
√	Hazardous substances and petroleum products in connections with identified uses	None observed.
√	Hazardous substances and petroleum products in connections with unidentified uses	None observed.
√	Stained soils and pavement, corrosion and degradation of floors and walls	None observed.
√	Drains and sumps	None observed.
√	Pits, ponds, and lagoons	None observed.
√	Surface drainage pathways	No pathways onto or off of Property.
√	Stress vegetation (from something other than insufficient water)	None observed.
√	Solid waste and wastewater	None observed. Debris and human waste was present in the building from previous homeless occupations.
√	Septic system	None observed. Site is on City

Checked	Observations	Remarks
		Sewer
√	Potable water supply	None observed. Site is no City Water.
√	Wells (including dry wells, domestic and irrigation wells, injection wells and monitoring wells)	None observed.

#### 4.3 Exterior Observations

The periphery of the property was observed to evaluate evidence of an avenue for the disposal of hazardous substance or petroleum products. No pathway was observed.

#### 4.4 Interior Observations

The building was built prior to

### 5 Interviews

#### 5.1 Interview with Owners

The user questionnaires were not returned during the preparation of this report.

#### 5.2 Interview with Site Manager

Not applicable as there is no site manager.

#### 5.3 Interviews with Occupants

Not applicable as there are no occupants.

#### 5.4 Interviews with Local Government Officials

Local agencies were contacted for records and not interviewed.

#### 5.5 Interviews with Others

No interviews with others were conducted.

### 6 Findings and Opinion

The Property has been industrial since its construction. The building is currently being used as storage by the City of Fresno. The building has had multiple uses over the years including lumber yard and produce and egg wholesale warehouses. There is a vault and safe in the main floor level in the southwest corner of the building. The basement of the building was accessed in two locations as it is not continuous throughout the building. In the northwest basement of the building, a service elevator was used and still present. No obvious leakages of hydraulic fluid were noted from the motor and pump. The space below the down elevator was not available to be seen so the condition is unknown.

The Property is listed on the state or federal databases searched by EDR for the US Brownfields database. The former City of Fresno Redevelopment Agency received a US Brownfield Grant in 2014 for a Phase I Environmental Site Assessment for APNs 467-040-20ST, -22ST, and 23ST. The Phase I report or Lead Based Paint and Asbestos Containing Materials Report were not available to review during the preparation of this report.

The EDR Radius Map Report states based on the date of construction, the 2014 Phase I ESA requested an asbestos and lead-based paint survey from a private subcontractor, T. Brooks and Associates of Clovis, California, (Now a portion of Provost & Pritchard) for the warehouse located on parcel APN 467-04-23ST (aka 735, 739, 741 H Street). The methodology and results of the survey are presented under separate cover and entitled Asbestos Survey & Lead-Based Paint Inspection Report, Commercial

Structure 735, 739, & 741 H Street, Fresno, California, dated May 28, 2014. The survey concluded, in part, that 20 samples collected by Brooks for analysis included one or more samples which tested positive for asbestos in amounts greater than 1.0 percent. The samples testing positive included drywall taping mud and texture, drywall texture, wall paneling, 9-inch x 9-inch vinyl floor tile and associated mastic, and vibration damper. The survey concluded, in part, that the majority of testing combinations considered as part of Brook's investigation were found to contain lead in some amount. A total of 47 testing combinations on the interior surfaces and 4 exterior surfaces were found to include lead in excess of 1.0 milligrams per square centimeter (mg/cm<sup>2</sup>)(0.5), (5,000 parts per million) and would be classified as Lead-Based Paint (LBP) under state and federal regulations. Former Use: Based on a review of historical documents, parcel APN -20ST has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST and -23ST. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885.

The user questionnaires were not returned during the preparation of this report.

The EDR Vapor Encroachment Screen was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property involved in Real Estate Transactions (E-2600-10). The Screen indicates that vapor encroachment conditions do not exist for the Property.

## 7 Data Gaps

A data gap is a lack of or inability to obtain information required by ASTM E1527-13 despite good faith efforts to gather such information.

Aerial photographs and topographic maps provided were not at an interval of five years. Interviews were not conducted as no one familiar with the Property historic use was identified.

The user questionnaires were not returned during the preparation of this report.

These data gaps are not suspected to be significant.

## 8 Conclusions

We have performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM E 1527-13 of the 735 H Street Property in Fresno County, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

- ◆ Provost & Pritchard has performed this ESA in general conformance with the scope and limitations of ASTM E 1527-13. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) in connection with the Property except for the following:
  - Based on the age of the building and a previous investigation for Lead Based Paint and Asbestos Containing Materials in 2014, an updated investigation report should be completed.
  - Several generations of fluorescent lighting fixtures are present. Some fixtures may contain PCB's and should be evaluated and disposed in accordance with State regulations
- ◆ In addition, non-scope considerations that do not meet the ASTM definition of a REC include:
  - The elevator appears to be in good condition considering the age, the motor and pump did not appear to have obvious leaks but the base of the elevator was not visible for observations to evaluate if the apparatus including pistons had leaked.

## 9 Environmental Professional Statement

Provost & Pritchard Consulting Group declares that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in section 312.10 of 40 CFR Part 312.

Provost & Pritchard Consulting Group has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## 11 Environmental Professional(s) Resume(s)

# Stephanie Gillaspy, EIT

## Project Manager

### Education

- ✓ **Master's in Business Administration,**  
University of Phoenix, Fresno, California
- ✓ B.S. Environmental Engineering,  
University of California, Riverside

### Registration/Certifications

- ✓ Engineer-in-Training, California #122205
- ✓ HAZWOPER (40 hours)

### Areas of Expertise

- ✓ Phase I & II Environmental Site Assessments
- ✓ Groundwater Assessments
- ✓ Remediation Systems
- ✓ Reports of Waste Discharge
- ✓ Site Plan Reviews

## Professional Summary

Stephanie Gillaspy is an assistant engineer and environmental specialist at Provost & Pritchard, with over 16 years of experience in project management, RWQCB compliance and permitting, environmental assessment and remediation field activities. She is knowledgeable of regulatory issues with the RWQCB, the SJVAPCD, and Central Valley cities and counties. Ms. Gillaspy has worked extensively with the RWQCB since the beginning of her career, knows many of the RWQCB staff, and understands how they regulate.

She has completed over 150 Phase I and Phase II environmental site assessments including field experience, and planning experience in the preparation of site plan review documents. Ms. Gillaspy is an excellent project manager with skills in managing schedule, budget, and project teams, and has a great track record of delivering numerous quality deliverables for clients and helping to navigate complex permitting processes.

She also was involved with the creation in 2009 of a weekly training program internal to Provost & Pritchard titled the University of Provost. She has served **as 'chancellor' since its inception, spearheading the scheduling** of presenter and student signups, follow-up class quizzes, and an awards program based on level of participation. The longevity of the program is testament to its popularity among the employees.

## Relevant Experience

Phase I ESA for Future Municipal Well Sites, City of Fresno, California, Project Manager – Ms. Gillaspy was responsible for overseeing the preparation **of four Phase I ESAs for the City of Fresno's Water Division. The property** assessed was for future municipal well sites on San Madele Avenue, Bullard Avenue, Sussex Avenue and Weber Avenue. The San Madele and Bullard Avenue sites contained houses to be demolished if the test well produced sufficient clean water. The houses were in good condition but built in the late 1970s, so lead-based paint and asbestos-containing materials testing was recommended before the demolition of the house. The Sussex Avenue property was an empty lot between businesses. The Weber Avenue property was a gas station constructed in the 1960s. No records indicated that the underground storage tanks were removed. Ground Penetrating Radar (GPR) was recommended to locate underground storage tanks. All four Phase Is were completed within a short time frame and under budget.

Phase I ESA for Treat Property, City of Merced, California, Project Manager – Ms. Gillaspy was responsible for the preparation of an All Appropriate Inquiry (Phase I ESA) for property the City of Merced was in the process of purchasing for the expansion of Yosemite Avenue at the intersection with Highway 59. Multiple APNs assigned to the property over the years made it difficult to track down historical records. An unused water well was located onsite and recommended to be properly destroyed prior to construction of the road expansion.

Phase II & Phase III PCE Remediation System Optimization and Groundwater Monitoring and Reporting in Downtown Turlock, City of Turlock, California, Environmental Specialist – Ms. Gillaspy provided environmental services for this optimization project in order to increase the rate of removal of perchloroethylene (PCE) contamination in the groundwater by **increasing the pump rate of the City's existing remediation system's shallow tray**

air stripper. Further, this project includes associated groundwater monitoring over a three-year period to assess the effectiveness of the remediation system by measuring concentrations of PCE, TCE, and other related breakdown chemicals within downtown Turlock. Provost & Pritchard is currently in the second year of this three-year project.

R Street TPH and Related Compounds Environmental Assessment & Remedial Services, Kosmont Companies, Merced, California, Environmental Specialist – Ms. Gillaspy is currently providing environmental assessment, cost analyses, feasibility and remedial services for the **City of Merced's Redevelopment Agency at the R Street TPH site (including a 1,000 foot MTBE plume)** project. Key tasks included project management; invoicing, scheduling and coordination of subcontractors and field crews, and quarterly reporting. Also included were preparation of water quality studies associated with City Well No. 5; preparation of work plans and permits for drilling and monitoring well installation; health and safety plans; traffic control plans; conducting quarterly groundwater sampling; and air quality sampling. She is also responsible for coordinating communication with the RWQCB, the preparation of a focused feasibility study, the preparation of the Final Remedial Plan (FRP), and implementation of the selected remedial option for the project site.

Hartley Slough Site Mitigation, City of Merced, California, Project Manager – Ms. Gillaspy is leading the environmental mitigation services tasks provided to the City of Merced in connection with the Hartley Slough Solid Waste Facility. The project site is located southeast of the former City of Merced Municipal Dump Site. The dump site ceased operation and was closed over **in the mid 1970's. Today, the dump site is closed and surrounded by a chain-link fence** for site security and is periodically inspected by the Merced County Division of Environmental Health's (MCDEH) Local Enforcement Agency solid waste program staff. MCDEH staff observed debris at the ground surface during a site inspection of the adjacent closed solid waste facility in 2009, prompting the need to construct a cover for the former dump site. The project includes the design of the cover as well as the excavation of the top 12 inches of soil that may have been impacted by debris. An environmental document was also prepared as part of the project to assess the environmental impacts on the site.

Phase I & II Environmental Site Assessments, Industrial Building, Fresno, California, Project Manager – Ms. Gillaspy led the project team responsible for the completion of Phase I and II ESAs of a 50,000-square-foot industrial property located adjacent to railroad tracks in Fresno, California. The owner provided Phase I ESA and Phase II ESA to our client which identified RECs on site that appeared to warrant further investigation. Additional areas of concern were identified after a site visit and review of the Phase I and II. Ms. Gillaspy recommended that soil samples up to 20 feet below ground surface should be collected and analyzed for petroleum hydrocarbons and Stoddard solvents at several locations due to the potential of releases based on the historical use and businesses identified in the area. A lead-based paint and asbestos containing materials survey were also recommended and completed within the project timeline. Additional investigation into the onsite underground storage tank (UST) was completed by discussion closure options with the Fresno County Environmental Health Department. Based on the location of the UST, the best option for abandonment was in-place closure once it has been verified the soil was clean surrounding the UST. Geoprobe drilling down to 20 feet below ground surface soil samples were collected for this investigation. Chemicals of concerns were identified in additional locations identified in the Phase II ESA provided by the owner. Upon receiving the laboratory results for the drilling, our client decided against purchasing the property due to future liability.

Phase I ESA, Academy Ranch, Clovis, California, Project Manager – Ms. Gillaspy conducted a Phase I ESA for property located southeast of McKinley Avenue and Academy Avenue in Fresno County. Academy Ranch is in the process of purchasing the parcel and was in need of a Phase I.

#### Fresno County Environmental Landfill Project, Project Manager

Upon working with Fresno County Environmental Health Division on another project, we were approached by FCEH to develop a database that could easily show the landfills in northeast Fresno near Palm and Nees Ave. Numerous landfills were nearly on top of each other and no historical information was easily accessible. Extensive research was done on each landfill to show maps, project history as well as current APNs that could be impacted by the landfills. P&P staff developed a GIS platform that could easily show if any APN in the area could have been impacted by the landfills in the area. The GIS platform was well received by Fresno County and it now part of their internal website.

#### Palm Bluffs West, TCE Investigation, Project Manager

Upon discovery of the Camp Pinedale incinerator on the property during a Phase I investigation, soil gas sampling was completed to estimate volume and a soil vapor extraction system has been installed and operated to remove Trichloroethylene (TCE) from the site. The incinerator was unknown to the current owner so P&P staff have been working with the owner in the remediation stages.

Phase I ESA for Future Municipal Well Sites, City of Fresno, California, Project Manager – Ms. Gillaspay was responsible for **overseeing the preparation of four Phase I ESAs for the City of Fresno's Water Division. The property assessed was for future municipal well sites on San Madele Avenue, Bullard Avenue, Sussex Avenue and Weber Avenue.** The San Madele and Bullard Avenue sites contained houses to be demolished if the test well produced sufficient clean water. The houses were in good condition but built in the late 1970s, so lead-based paint and asbestos-containing materials testing was recommended before the demolition of the house. The Sussex Avenue property was an empty lot between businesses. The Weber Avenue property was a gas station constructed in the 1960s. No records indicated that the underground storage tanks were removed. Ground Penetrating Radar (GPR) was recommended to locate underground storage tanks. All four Phase Is were completed within a short time frame and under budget.

Phase I ESA for Treat Property, City of Merced, California, Project Manager – Ms. Gillaspay was responsible for the preparation of an All Appropriate Inquiry (Phase I ESA) for property the City of Merced was in the process of purchasing for the expansion of Yosemite Avenue at the intersection with Highway 59. Multiple APNs assigned to the property over the years made it difficult to track down historical records. An unused water well was located onsite and recommended to be properly destroyed prior to construction of the road expansion.

Phase II & Phase III PCE Remediation System Optimization and Groundwater Monitoring and Reporting in Downtown Turlock, City of Turlock, California, Environmental Specialist – Ms. Gillaspay provided environmental services for this optimization project in order to increase the rate of removal of perchloroethylene (PCE) contamination in the groundwater by **increasing the pump rate of the City's existing remediation system's shallow tray air stripper. Further, this project includes** associated groundwater monitoring over a three-year period to assess the effectiveness of the remediation system by measuring concentrations of PCE, TCE, and other related breakdown chemicals within downtown Turlock. Provost & Pritchard is currently in the second year of this three-year project.

Phase I ESA along Dakota Avenue, Community Regional Medical Center, Fresno, California, Project Manager – Ms. Gillaspay was responsible for conducting a Phase I ESA at 1925 E. Dakota Avenue on the Community Regional Medical Center **campus in Fresno. Historical records indicated a UST was onsite in the 1970's but further investigation found the UST had been properly removed with clean soil samples.** An additional lead based paint and asbestos containing materials survey was recommended based on the age of the property.

Phase I & II Environmental Site Assessments, Industrial Building, Fresno, California, Project Manager – Ms. Gillaspay led the project team responsible for the completion of Phase I and II ESAs of a 50,000-square-foot industrial property located adjacent to railroad tracks in Fresno, California. The owner provided Phase I ESA and Phase II ESA to our client which identified RECs on site that appeared to warrant further investigation. Additional areas of concern were identified after a site visit and review of the Phase I and II. Ms. Gillaspay recommended that soil samples up to 20 feet below ground surface should be collected and analyzed for petroleum hydrocarbons and Stoddard solvents at several locations due to the potential of releases based on the historical use and businesses identified in the area. A lead-based paint and asbestos containing materials survey were also recommended and completed within the project timeline. Additional investigation into the onsite underground storage tank (UST) was completed by discussion closure options with the Fresno County Environmental Health Department. Based on the location of the UST, the best option for abandonment was in-place closure once it has been verified the soil was clean surrounding the UST. Geoprobe drilling down to 20 feet below ground surface soil samples were collected for this investigation. Chemicals of concerns were identified in additional locations identified in the Phase II ESA provided by the owner. Upon receiving the laboratory results for the drilling, our client decided against purchasing the property due to future liability.

Phase I Environmental Site Assessment, Gateway Village, Madera, California, Environmental Specialist – Ms. Gillaspay was responsible for the completion of an environmental site assessment for a proposed master-planned community covering over 2,000 acres.

Phase I Environmental Site Assessment, Ito Packing Company, Reedley, California, Environmental Specialist – This project consisted of completing an environmental site assessment for an existing packing plant. Historical underground storage tanks were removed prior to permits. Ms. Gillaspay worked closely with the client to complete the report in a short timeframe.

Phase I Environmental Site Assessment, Kings River Resorts, Inc, Kingsburg, California, Environmental Specialist – Ms. Gillaspay completed an environmental site assessment for an existing recreational vehicle park along the Kings River. She worked closely with the client to complete the report in a short timeframe.

Kings County Site Plan Review, Southeast Ranch, Stratford, California, Environmental Specialist – Ms. Gillaspay was responsible for project planning and completing a site plan review application to Kings County standards. She also completed the report of waste discharge for the client for submittal to the Regional Water Quality Control Board. A preliminary nutrient management plan and a waste management plan were completed. The project included perched groundwater constraints.

Kings County Site Plan Review, John L. Fragoso & Sons Dairy, Hanford, California, Project Manager – Ms. Gillaspay was responsible for project planning and completing a site plan review application for an expanding dairy to the Kings County standards. She also completed the report of waste discharge for the client for submittal to the Regional Water Quality Control Board. During this project, a preliminary nutrient management plan and waste management plan were completed.

Water Supply Study, White Paper, City of Clovis, California, Project Engineer – Ms. Gillaspay assisted the project manager in completing a water supply study report for the City of Clovis. Project responsibilities also included the preparation of Power Point slides for presentations to the City.

Report of Waste Discharge, Riverstone (formerly known as Gateway Village), County of Madera, California, Project Engineer – Ms. Gillaspay prepared a report of waste discharge for submittal to the Regional Water Quality Control Board. The report included water balance calculations to determine nutrient loading, percolation rates, and storage capacities.

Groundwater Monitoring Network Plan, Ito Packing Company, Reedley, California, Project Engineer – Ms. Gillaspay worked with the Regional Water Quality Control Board to obtain approval for a monitoring well network plan for land disposal area. The project included the installation of three monitoring wells on-site, and completion of a post-construction report for the monitoring well.

Phase II Environmental Site Assessment, Rosendahl Dehydrator, Caruthers, California, Environmental Specialist – This project consisted of the completion of an environmental site assessment and **cleanup of diesel impacted soils**. Ms. Gillaspay's project responsibilities included coordination with the Regional Water Quality Control Board to complete cleanup of the site in less than two months.

Report of Waste Discharge, Batth Dehydrator, Caruthers, California, Project Manager – Ms. Gillaspay provided regulatory compliance assistance to the client in a short timeframe in order to guarantee financing for purchase of the dehydrator. In order to achieve this, a new waste discharge permit was needed. While working with the Regional Water Quality Control Board, the report of waste discharge was deemed complete within 30 days of submittal.

Report of Waste Discharge, Sunview Cold Storage, Kern County, California, Project Manager – Ms. Gillaspay was responsible for Regional Water Quality Control Board compliance for adding a reverse osmosis unit to a system operation. The report included water balance calculations to determine nutrient loading rates for associated cropland.

Groundwater Monitoring Network Plan, Del Rey Packing, Del Rey, California, Project Manager – Ms. Gillaspay worked with the Regional Water Quality Control Board to obtain approval for a monitoring well network plan for a land disposal area. The project included installation of three monitoring wells on-site and completion of a post-construction report for the monitoring well.

Kings County Site Plan Review, David teVelde Dairy, Hanford, California, Project Manager – Ms. Gillaspay was responsible for project planning and completing a site plan review application to the Kings County standards. During this project, Ms. Gillaspay completed an updated a report of waste discharge for the client for submittal to the Regional Water Quality Control Board. The project included 100-year flood zone issues. A preliminary nutrient management plan and waste management plan were also completed.

Kings County Site Plan Review, Lakeview Calf Ranch, Hanford, California, Project Manager – Ms. Gillaspay was responsible for project planning and completing a site plan review application to the Kings County standards. As part of this project, a report of waste discharge was completed for client for submittal to the Regional Water Quality Control Board. A preliminary nutrient management plan and waste management plan were also completed.

Underground Storage Tank Cleanup, Redevelopment Agency, City of Merced, California, Project Manager – This project consists of the clean-up of impacted groundwater and soil, and maintenance of the soil vapor extraction (SVE) system operation. Ms. Gillaspay has been responsible for coordination of the installation of a new ozone sparge system with multiple subcontractors. In addition, she has maintained constant contact with the client throughout the process, and performs quarterly groundwater monitoring and prepares reports for the Regional Water Quality Control Board. Ms. Gillaspay also prepared a feasibility study, a final remediation plan, and remediation system updates.

PCE Remediation and Reporting, Seven Dry Cleaners, City of Merced, California, Project Manager – Based on the Regional Water Quality Control Board settlement agreement with the City of Merced, seven different dry cleaner sites were evaluated to determine the level of importance to remediate the impact of perchloroethylene (PCE). Working closely with the City of Merced's annual work plan, Parkway Cleaners was determined to be the highest importance for remediation. The SVE system was upgraded to include more vapor wells, and an ozone sparge system was installed. The SVE wells were added to the operation in December 2009, and ozone sparge wells will be added accordingly. Quarterly monitoring reports and sampling are also coordinated and submitted to the Regional Water Quality Control Board.

Phase I & II Environmental Site Assessments for Crop Dusting Facility, Western Fresno County, California, Technical Reviewer – Ms. Gillaspay is currently providing technical oversight and reviews for a Phase I ESA and a limited Phase II ESA for a western agriculture aviation property in western Fresno County. The property includes a crop dusting airport and runway. Based on the history of the site, soil samples were taken in areas of potential contamination. Significant detections for Toxaphene and Endosulfan were found in various places. Price estimates were calculated to estimate the approximate cost to clean up the contaminants of concern.

Preliminary Environmental Assessment (PEA) for Proposed New Elementary School Site, Sanger Unified School District, Sanger, California, Ms. Gillaspay was involved with the scoping and implementation of a PEA work plan and subsequently prepared the draft PEA for the proposed school site on a rural residence and farm property. This work incorporated Incremental Sampling Mythology (ISM) for former structural areas of the site. Potential chemicals of concern included organochlorine pesticides (OCP) and select metals. Over 545 soil samples were collected on the 12 acres. The draft PEA concluded that the reported chemical concentrations are not at hazardous levels nor do they exceed health-risk based screening levels. Consequently, a No Further Action determination will be pursued from the DTSC. The draft PEA was made available for public review by the School District. A final PEA was submitted to DTSC for their final approval.

Tulare Lakes Basin Water Study, County of Tulare, California, Assistant Engineer – Ms. Gillaspay is providing assistance with the development of pilot reports, including implementation strategies and recommendations for establishing and upgrading water and wastewater infrastructure in disadvantaged communities within the Tulare Lake Basin. The Tulare Lake Basin encompasses disadvantaged communities within the four counties of Kern, Kings, Tulare, and Fresno. The plan addresses various potential solutions to secure safe and affordable drinking water along with adequate and affordable wastewater treatment and disposal systems for these communities.

# David Norman

## Environmental Specialist

### Education

- ✓ B.S. Geology, San Jose State University, California
- ✓ B.A. Management & Organizational Development, Fresno Pacific University, California

### Registration/Certifications

## Professional Summary

Dave Norman has over 30 years of experience providing environmental and engineering consulting services for clients throughout California. His expertise encompasses regulatory compliance, site assessments, human health risk assessments, and remedial action. In addition, he has managed a wide range of Brownfields and redevelopment projects for many small to medium-sized cities in the central valley. Brownfields projects have ranged from significant gasoline impacts requiring assessment and remediation to the simultaneous assessment and cleanup of seven dry cleaner sites. Mr. Norman has extensive experience with a wide range of environmental assessment and compliance for project sites such as processing locations for a large winery organization, former firing ranges, burn dumps, and landfills. He also has experience with civil and development projects including pavement assessments and management plans for Yosemite National Park.

Mr. Norman has represented clients in front of city councils and county counsels, school boards, and state and federal agencies such as the U.S. Environmental Protection Agency, Regional Water Quality Control Board (RWQCB) and California Department of Toxic Substance Control (DTSC).

## Relevant Experience

### Phase I, Phase II and Risk Assessments

**Phase I Environmental Site Assessment for San Madele Well Site, City of Fresno, California, Technical Reviewer** – Mr. Norman provided technical oversight and reviews for the preparation of a Phase I environmental site assessment (ESA) for the City of Fresno's Water Division. The property assessed was for a new domestic well site on San Madele Avenue. The house was to be demolished if the test well drilled produced sufficient clean water. Recommendations were given based on the plan for the house. The house was in good condition but built in 1979, so lead-based paint and asbestos containing materials testing was recommended before the demolition of the house. The Phase I ESA was completed within a short timeframe and under budget.

**Phase I & II Environmental Site Assessments for Crop Dusting Facility, Western Fresno County, California, Technical Reviewer** – Mr. Norman is currently providing technical oversight and reviews for a Phase I ESA and a limited Phase II ESA for a western agriculture aviation property in western Fresno County. The property includes a crop dusting airport and runway. Based on the history of the site, soil samples were taken in areas of potential contamination. Significant detections for Toxaphene and Endosulfan were found in various places. Price estimates were calculated to estimate the approximate cost to clean up the contaminants of concern.

**Phase I & II Environmental Site Assessments, Marl Springs, Mojave National Preserve, Mojave, California, Project Manager** – Mr. Norman was responsible for completing a Phase I and II ESA and a human health risk assessment of a historic mine. The Marl Springs area of the Mojave National Preserve is the site of the only potable water supply for over 100 miles. The spring was used by early California explorers and mule trains to rest and water horses. Marl Springs is also the site of historic gold and silver mining. The Mojave National Preserve discovered that lead and other heavy metals were present in elevated concentrations requiring further action. The main concerns were whether the concentrations were a human or ecological risk to visitors and

the endangered desert tortoise that occupied the park. A human health risk assessment was conducted. In addition, a visitor study to evaluate the visitor travel patterns through the area was conducted. The combination of both studies was used to develop a site specific exposure scenario which showed that the exposure thresholds for lead and other heavy metals were below human health risk levels, and the ecologic risk was low for the desert tortoise and other animals because the limited uptake of metals by native plants was insignificant.

**Hazardous Waste Evaluations, Red Fir Maintenance Facility, Sequoia National Park, California, Project Manager – Mr. Norman** conducted several soil assessments at the Red Fir facility in support of a waste management program to evaluate potential locations for historic dumping of waste chemicals and hydrocarbons. As a result of the assessments, the area was cleared of potential remediation or other actions.

**Phase II Environmental Site Assessment, Health Risk Assessment and Site Closure, Zymex Industries, Merced, California, Project Manager – Zymex Industries** was interested in purchasing a parcel of land at the Airport Redevelopment Business Park from the City of Merced to construct a new tomato processing plant. The parcel and surrounding area was the location of the former Merced Rod and Game Club. For over 50 years, skeet and trap shooting was conducted at the site. Elevated concentrations of lead from the accumulations of lead shot and bullets were detected at the site after the City had conducted several remediation efforts. Mr. Norman assisted the client with formulating an agreement with the DTSC to provide oversight for a self-directed assessment, human health risk assessment and site closure through the department's voluntary cleanup program. Over 75 samples were collected and analyzed for lead, nickel and other compounds associated with clay pigeons and ammunition. On the basis of the results, a human health risk assessment was prepared finding no significant increase in risk. The DTSC issued a site closure letter free of title restrictions and the tomato packing plant was constructed.

**Pollution Prevention Planning, Sequoia and Kings Canyon National Park, California, Project Manager, Lead Technical Writer –** For this project, Mr. Norman focused on documenting and evaluating the waste streams for the Sequoia and Kings Canyon National Parks and developing waste minimization strategies, recycling opportunities and waste reuse plans. All of the parks' facilities including maintenance, water treatment and wastewater treatment facilities, and former landfill sites were reviewed for chemical and non-chemical waste. The project resulted in the publishing of park-wide Pollution Prevention Opportunity Assessment, and the implementation of new waste minimization programs including a one-pound propane cylinder disposal education program.

**Total Petroleum Hydrocarbon Soil Assessment, Sequoia National Park, Crystal Cave, California, Project Manager–** Crystal Cave is one of many naturally sensitive caves located in the Sequoia and Kings Canyon National Parks, and is one of only two open to the public for guided tours. In the early 1900s, the park installed a generator to provide electric power to a lighting system. Due to its remote location and difficult access all fuel was hand carried to the site. In the 1940s, an in-ground power line was installed and the generator was removed from service but left in place. Over the years the generator deteriorated and the remaining fuel and oil leaked from its tanks. In 2005, the park dismantled the generator and removed it by hand. During the process impacted soil was encountered underneath and surrounding the generator. Mr. Norman assisted the park in assessing the extent of impact and negotiated with the local county to allow for the impacted soil to be removed slowly (bucket by bucket) during the closed season and stored for later use in asphalt for park road projects. Over two closed (winter) seasons the soil was removed and the project was closed by the county. All equipment, including waste, samplers and replacement soil, was hand carried to the site in buckets with a 20 pound weight limit.

**Environmental Assessment & Remedial Services, City of Merced, California, Principal-in-Charge –** Mr. Norman is responsible for overseeing environmental assessment and remedial services for the City of Merced's R Street leaking UST assessment, remediation and site closure project. Project responsibilities include project and funding management (Brownfields Cleanup Grant, UST Fund and city redevelopment funds), quarterly monitoring and reporting, communication with the RWQCB, preparation of a focused feasibility study, groundwater monitoring, and the preparation of the final remedial plan (FRP) and implementation of the selected remedial remedy for the project site. The site is comprised of two gasoline stations and a total petroleum hydrocarbons (TPH) and methyl tert-butyl ether (MTBE) plume over half a mile in length. The remedial action includes the installation and operations of two soil vapor extraction (SVE) and ozone injection systems.

# The EDR Property Tax Map Report

## EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

## NO COVERAGE

*Thank you for your business.*

Please contact EDR at 1-800-352-0050  
with any questions or comments.

### Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

## EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

**Thank you for your business.**  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LUST.....	Recovered Government Archive Leaking Underground Storage Tank

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there are 2

## EXECUTIVE SUMMARY

SEMS sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 58 CUPA Listings sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

PG AND E MANUFACTURE	BLOCK OF F,G, FRESNO	WNW 1/4 - 1/2 (0.309 mi.)	AE178	336

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 32 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 9 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Name: PARCELS 467-04-20ST, -22ST, -23ST  
 Address: 801 H STREET  
 City,State,Zip: FRESNO, CA 93721  
 Recipient Name: Fresno Redevelopment Agency  
 Grant Type: Assessment  
 Property Number: 467-04-20ST, -22ST, -23ST  
 Parcel size: 5.5  
 Latitude: 36.7302000  
 Longitude: -119.7904000  
 HCM Label: Global Positioning Method-Unspecified Parameters  
 Map Scale: -  
 Point of Reference: Center of a Facility or Station  
 Highlights:

Based on the date of construction, URS requested an asbestos and lead-based paint survey from a private subcontractor, T. Brooks and Associates of Clovis, California, for the warehouse located on parcel APN 467-04-23ST (aka 735, 739, 741 H Street). The methodology and results of the survey are presented under separate cover and entitled Asbestos Survey & Lead-Based Paint Inspection Report, Commercial Structure 735, 739, & 741 H Street, Fresno, California, dated May 28, 2014. The survey concluded, in part, that 20 samples collected by Brooks for analysis included one or more s which tested positive for asbestos in amounts greater than 1.0 percent. The samples testing positive included drywall taping mud and texture, drywall texture, wall paneling, 9-inch x 9-inch vinyl floor tile and associated mastic, and vibration damper. The survey concluded, in part, that the majority of testing combinations considered as part of Brook s investigation were found to contain lead in some amount. A total of 47 testing combinations on the interior surfaces and 4 exterior surfaces were found to include lead in excess of 1.0 milligrams per square centimeter (mg/cm2)(0.5), (5,000 parts per million) and would be classified as Lead-Based Paint (LBP) under state and federal regulations. Former Use: Based on a review of historical documents, parcel APN -20ST has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST and -23ST. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Point of Reference: Entrance Point of a Facility or Station  
 Highlights: Based on a review of historical documents, the subject property and adjacent parcels have been developed for commercial use in a well-established portion of downtown Fresno since back to at least 1918. Prior to 1918, the subject property was developed as a single-family residence with appurtenant structures in a commercial district of downtown Fresno back to at least 1885. Based on the age

of the structure dating back to at least 1946, building materials may contain asbestos. There is also the possible presence of lead-based paint. According to the best recollection of the subject property tenant, there has never been an asbestos or lead-based paint survey performed on the subject property structure. Former Use: In 1918, the subject property parcel contained Zibbell's Auto Exchange Garage in the general configuration as the present day structure. In 1948, the subject property parcel contained a wholesale beer distributorship, apparently part of the Richter Bottling Company located to the southeast. In 1950, the subject property parcel contained an auto brake shop. The subject property was identified with several different auto parts stores up to 2008, when the Fresno RDA took possession and the current tenant, Pool Tables R Us, occupied the site.

Longitude: -119.787318  
HCM Label: Address Matching-House Number  
Map Scale: -  
Point of Reference: Entrance Point of a Facility or Station  
Highlights: Subsurface soil contamination from benzene, xylene, and 2-methylnaphthalene has been identified at one location on the property parcel at concentrations greater than the site screening levels and ESL benchmarks. The contamination is most likely associated with historical leaking of a dispenser pipe. Contamination was not found at any other sampled subsurface location. The identified contamination is not believed to be a threat to groundwater based upon the estimated quantity of soil affected, the contaminant concentrations, and depth to groundwater. The identified contamination is not likely to pose any risk to human health. Former Use: Property is an automotive repair facility. Property has operated as a gas station/auto care since 1937. All USTs were removed in 2014.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Longitude:** -119.790762  
**HCM Label:** Global Positioning Method-Unspecified Parameters  
**Map Scale:** -  
**Point of Reference:** Center of a Facility or Station  
**Highlights:** In an October 7, 2004 letter to the City of Fresno, the Fresno County Environmental Health System (EHS) referred the case to the RWQCB for regulatory oversight. In a letter dated November 2, 2004, the RWQCB directed the City to submit a work plan to assess petroleum hydrocarbon impacts to soil beneath the site. Former Use: The site is the location of a former gasoline station at the south corner of Mono and G Streets in downtown Fresno, California. The site has no existing structures and is entirely paved with remnant concrete slabs from structures previously occupying the site.

RB Case Number: 5T10000124  
Local Agency: Not reported  
File Location: Regional Board  
Local Case Number: Not reported  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110070849287

 Parcel size: .61  
 Latitude: 36.73216  
 Longitude: -119.78792  
 HCM Label: Global Positioning Method-Unspecified Parameters  
 Map Scale: -  
 Point of Reference: Center of a Facility or Station  
 Highlights:

The subject property is a commercial parking lot with no significant improvements other than a guard shack, asphalt pavement, parking stall stripping, parking meters, and several lighting fixtures with a chain-link fence along the southwest side. Former Use: Based on review of historical documents, the subject property appears to have been located in an area of downtown Fresno urban development dating back to 1885. The first developments occurred in the forms of private residences in about 1888. The subject property was occupied by single-family residences and boarding houses with stables through the early 1900s giving way to retail and commercial development during the mid-1900s. By the mid-1960s, all the structures had been removed and the site was developed as a paved parking facility similar to present-day configuration. This assessment identified no Recognized Environmental Conditions (RECs) in connection with the subject property. For the reasons discussed in Section 8.2 of the ESA, it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the New York Hatters Hat Cleaners and Blockers, or Victor Kuljian, clothes cleaner; and additionally it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the presence of lead-based paint on the subject property parcel as a result of sloughing from neighboring site structure and no further

 Local Agency: Not reported  
 File Location: Regional Board  
 Local Case Number: FA0268373  
 Potential Media Affect: Under Investigation  
 Potential Contaminants of Concern: Diesel  
 Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. The case was referred to CVRWQCB by Fresno County Environmental Health Division on 2/22/2008. CVRWQCB has directed a preliminary site investigation. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RB Case Number: 5T10000177  
Local Agency: Not reported  
File Location: Regional Board  
Local Case Number: FA0266637  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Heating Oil / Fuel Oil  
Site History: On 4 September 2015, two underground storage tanks (USTs) were removed from the subject address (Site). Analytical results of soil samples collected from beneath the USTs detected concentrations of petroleum hydrocarbon constituents. Considered evidence of a release of petroleum products from the USTs, the Fresno County Environmental Health Division (FCEHD) issued an Underground Storage Tank Unauthorized Release (Leak) / Contaminated Site Report on 20 June 2016. On 21 June 2016, the FCEHD referred the Site to the Central Valley Regional Water Quality Control Board (Central Valley Water Board) for regulatory oversight.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Point of Reference:	Entrance Point of a Facility or Station
Highlights:	The Fresno Housing Authority plans to redevelop the Site as a community garden for the homeless population that lives in the area. For reuse as a community garden, portions of the property may require cleanup, and garden users should take precautions, such as removing contaminated soil or using raised beds, and select fruiting vegetables, vine plants, and fruit trees. In the event the property is used for residences, the property may require cleanup in areas impacted by lead, PAHs, and petroleum. Former Use: The property is approximately 0.7 acre and is mostly undeveloped with an existing 0.1 acre community garden. Historical land use has been residential and commercial since 1898. A warehouse building constructed on the Site in the mid-to late-20th century was demolished in 2014.

Property Number:	-
Parcel size:	.7
Latitude:	36.726247
Longitude:	-119.789754
HCM Label:	Address Matching-House Number
Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	The Fresno Housing Authority plans to redevelop the Site as a community garden for the homeless population that lives in the area. For reuse as a community garden, portions of the property may require cleanup, and garden users should take precautions, such as removing contaminated soil or using raised beds, and select fruiting vegetables, vine plants, and fruit trees. In the event the property is used for residences, the property may require cleanup in areas impacted by lead, PAHs, and petroleum. Former Use: The property is approximately 0.7 acre and is mostly undeveloped with an existing 0.1 acre community garden. Historical land use has been residential and commercial since 1898. A warehouse building constructed on the Site in the mid-to late-20th century was demolished in 2014.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Local Agency: FRESNO COUNTY  
File Location: Not reported  
Local Case Number: FA0169029  
Potential Media Affect: Under Investigation  
Potential Contaminants of Concern: Diesel  
Site History: The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

POTW: Not reported  
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Media Affect: Aquifer used for drinking water supply, Soil  
Potential Contaminants of Concern: Heating Oil / Fuel Oil  
Site History: Sample results from beneath the underground storage tank indicate that an unauthorized release of fuel oil petroleum hydrocarbons occurred. Jurisdiction for clean up oversight belongs to the Regional Water Quality Control Board, Central Valley Region, Fresno office. The case will be referred to the Board as soon as possible for further action.

Status Date: 08/11/2015  
Case Worker: MLE  
RB Case Number: 5T10000919  
Local Agency: Not reported  
File Location: Regional Board  
Local Case Number: Not reported  
Potential Media Affect: Aquifer used for drinking water supply, Indoor Air, Soil, Soil Vapor  
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Naphthalene, Total Petroleum Hydrocarbons (TPH)

Site History: The subject property (Site) is currently vacant, but was formerly occupied by a warehouse used by a packing company. While conducting excavation for development, a previously unknown underground storage tank (UST) was exposed. The UST was calculated to have a capacity of approximately 1,000 gallons, and was nearly full of product, which was judged to be fuel oil. The oil was removed and disposed of properly. After removal of the UST, a soil sample was collected at 8 feet below ground surface (bgs) from the former UST location. Subsequent laboratory analysis of the soil sample indicated total petroleum hydrocarbons diesel range constituents (TPHd) at 410 milligrams per kilogram (mg/kg), and total petroleum hydrocarbons motor oil range constituents (TPHmo) at 3,100 mg/kg. Subsequent soil investigations performed between November 2014 and February 2015 determined that the extent of hydrocarbon impacted soil is confined to within the Site boundaries. The zone of impact is within an elliptical area with a maximum extent of 100 feet long and 65 feet wide, and between the depths of 15 to 45 feet bgs. The contamination is primarily heavier hydrocarbons constituents (TPHmo and TPHd) characteristic of fuel oil. Based on the TPHmo concentrations detected, and the estimated area of impacted soil at each depth, approximately 11,700 pounds (about 1,680 gallons) of fuel oil remain within the impacted soil. Groundwater is no shallower than 90 feet bgs beneath the Site, resulting in a buffer of approximately 45 feet of clean soil between the contamination and groundwater. Petroleum constituents that remain in soil beneath the Site should continue to degrade naturally, and pose no significant threat to human health and safety, the environment or groundwater beneath the Site. The case satisfies the criteria of the State Water Resources Control Boards Low-Threat Underground Storage Tank Case Closure Policy, adopted 1 May 2012.

Potential Media Affect: Soil  
Potential Contaminants of Concern: Diesel, Heating Oil / Fuel Oil  
Site History:

This is the second underground storage tank (UST) found and removed from the former Kalashian Packing Company site. This second UST was removed under permit from the County of Fresno Department of Public Health on April 8, 2009. Sample Results from beneath the UST indicated that an unauthorized release of diesel, and oil and grease petroleum hydrocarbons occurred. Jurisdiction for cleanup oversight belongs with the Regional Water Quality Control Board, Central Valley Region Fresno. The case will be referred the the Board as soon as possible for further action. Case referred. Impacted soil removed during UST removal. Very low concentrations in samples collected below UST, unlikely to threaten human health and the environment. Case closed.

Hazardous Waste Summary:

Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D022
Waste Description:	CHLOROFORM
Waste Code:	D039
Waste Description:	TETRACHLOROETHYLENE
Waste Code:	D040
Waste Description:	TRICHLORETHYLENE
Waste Code:	U002
Waste Description:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U012
Waste Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Waste Code:	U019
Waste Description:	BENZENE (I,T)
Waste Code:	U025
Waste Description:	DICHLOROETHYL ETHER (OR) ETHANE, 1,1'-OXYBIS[2-CHLORO-
Waste Code:	U026
Waste Description:	CHLORNAPHAZIN (OR) NAPHTHALENAMINE, N,N'-BIS(2-CHLOROETHYL)-
Waste Code:	U029
Waste Description:	METHANE, BROMO- (OR) METHYL BROMIDE
Waste Code:	U037
Waste Description:	BENZENE, CHLORO- (OR) CHLOROBENZENE
Waste Code:	U044
Waste Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Waste Code:	U056
Waste Description:	BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)
Waste Code:	U072
Waste Description:	BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE
Waste Code:	U075
Waste Description:	DICHLORODIFLUOROMETHANE (OR) METHANE, DICHLORODIFLUORO-
Waste Code:	U076
Waste Description:	ETHANE, 1,1-DICHLORO- (OR) ETHYLIDENE DICHLORIDE
Waste Code:	U077
Waste Description:	ETHANE, 1,2-DICHLORO- (OR) ETHYLENE DICHLORIDE

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Potential Contaminants of Concern: Tetrachloroethylene (PCE)  
 Site History: The Site is located at 1152 G Street in Fresno. The Site was historically used, from 1965 to 1986, to store bulk tetrachloroethene (PCE) in an aboveground storage tank at the northern section of the property. Soil and soil vapor surveys in 1996 indicated the presence of PCE. Several monitoring wells were installed in 1996 and showed PCE in the underlying groundwater. In 1998 a vapor extraction system was installed and ran until 2004. The extracted soil vapor is treated using two 2500-pound activated carbon vessels to remove the VOCs. Through subsequent testing a series of groundwater monitoring wells have been installed and continue to be monitored quarterly. Four new offsite SVE wells were installed during late 2008 and the SVE system. An SVE system is currently extracting soil vapors from five vapor extraction wells located near the highest concentrations of PCE in groundwater and soil. This is located just

downgradient of the site. Investigation to assess the lateral and vertical extent of impacts to groundwater is ongoing. Univar installed a remediation system to inject potassium permanganate into groundwater beneath the source area. Two injection events have been conducted. No further injection events are anticipated.

 Point of Reference: Center of a Facility or Station  
 Highlights: The main subject property parcel is currently utilized as a commercial parking lot operated by Ace Parking Management and available with permitted parking only. Former Use: Based on review of historical documents, the subject property appears to have been located in an area of downtown urban development dating back to 1885 when the first developments on the site were single-family residential dwellings, two paint shops; a livery stable and a hay shed. During the late 1890s and early 1900s the subject property was

developed commercially with retail businesses including two blacksmith shops. Commercial development of the subject property was predominate through the 1950s and into the early 1960s including an auto garage and storage facilities; two gasoline service stations; and a bus depot. By 1970 all structures had been removed from the subject property and it had been converted to a commercial parking lot similar to the present-day configuration and activities. This assessment identified no Recognized Environmental Conditions (RECs) in connection with the subject property. For the reasons discussed in Section 8.2 of the ESA, it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the historical activities of auto repair shops, gasoline service stations, blacksmith shops and other potentially hazardous activities on the subject property parcel and no further investigations appear warranted

File Location: Not reported  
Local Case Number: Not reported  
Potential Media Affect: Aquifer used for drinking water supply, Soil, Under Investigation  
Potential Contaminants of Concern: Ethylbenzene, Gasoline, Naphthalene, Xylene  
Site History: One underground storage tank (UST) system was removed from this location. The contents of the 550-gallon tank was gasoline. The exterior of the tank was rusted and pitted. Several pin-sized holes were observed. The depth to the base of the tank was approximately 6

feet below site grade (BSG). A total of two soil samples were obtained from beneath the UST at depths of approximately 9 feet and 14 feet BSG. One soil sample was obtained from beneath the former dispenser at a depth of approximately 5 feet BSG. Both samples below the UST indicate that gasoline constituents were present in soil at the following levels: 15 mg/kg Total Petroleum Hydrocarbons - gasoline range (TPHg) at 9 feet BSG, and 46 mg/kg TPHg at 14 feet BSG. Ethylbenzene, Toluene, Xylene, and Naphthalene were also detected. This case will be referred to the Regional Water Quality Control Board, Central Valley Region-Fresno for further investigation. Not reported

 Local Agency: FRESNO COUNTY  
 File Location: Not reported  
 Local Case Number: FA0169629  
 Potential Media Affect: Aquifer used for drinking water supply, Soil  
 Potential Contaminants of Concern: Benzene, Xylene, Diesel, Gasoline  
 Site History: Subsurface analysis of soil revealed the presence of petroleum constituents. Benzene, a constituent of petroleum products is currently on the list of Proposition 65 chemicals as a known carcinogen. The preliminary investigation conducted at the site showed soil contamination. Further investigation will be required. The case will be referred to the California Regional Water Quality Control Board, Central Valley Region for review, future site investigations and direct further assessment work as needed. The scope of future subsurface investigation may include the

**Actual:**      Project Revenue Source Company:      Not reported  
**291 ft.**      Project Revenue Source Addr:      Not reported  
                  Project Revenue Source City,St,Zip:      Not reported  
                  Project Revenue Source Desc:      This site is projected to be remediated by the responsible parties with reimbursement to DHS for its oversight costs. If the RPs are unable to fund site investigation and remediation, another source of funds will need to be identified.  
                  Site Description:      The site is presently owned by the Fresno County Credit Union and was previously a gasoline station. Five underground tanks were installed at the gas station by 1953. In December, 1981, a construction firm removed three tanks and the tanks were pressure tested. One tank failed to hold pressure and was disposed of as scrap metal. It is not known what became of the other two tanks.  
                  Hazardous Waste Desc:      Soil samples taken indicate that the soils were contaminated with constituents, typically found in gasoline, down to a depth of 55 feet. Ground water was encountered at a depth of 75 feet. Soil borings from the site contained benzene, toluene, ethylbenzene, xylene, organic lead, and EDB. Water samples contained all these same contaminants with the exception of organic lead.  
                  Threat To Public Health & Env:      Ground water beneath the site shows signs of contamination by constituents of gasoline. The ground water in this area, according to the Central Valley RWQCB, is of excellent quality and is used as the main source of drinking water.  
                  Site Activity Status:      Twining Laboratories, Inc., prepared a report for Fresno County Employees Credit Union entitled "Preliminary Geotechnical Investigation, Gasoline Contamination Assessment, Proposed Credit Union Building". The report was dated May 28, 1985 and describes the field and laboratory investigation.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: N/A
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: N/A
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 88	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/10/2021	Source: Environmental Protection Agency

## CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 07/15/2021	Source: CalEPA
Date Data Arrived at EDR: 07/15/2021	Telephone: 916-323-2514
Date Made Active in Reports: 10/06/2021	Last EDR Contact: 10/19/2021
Number of Days to Update: 83	Next Scheduled EDR Contact: 01/31/2022
	Data Release Frequency: Quarterly

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/18/2021	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 05/18/2021	Telephone: 202-307-1000

Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Semi-Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 05/28/2021	Source: DTSC and SWRCB
Date Data Arrived at EDR: 05/28/2021	Telephone: 916-323-3400

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

### FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 08/10/2021	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 08/17/2021	Telephone: 202-528-4285

Data Release Frequency: Quarterly

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013  
Date Data Arrived at EDR: 03/21/2014  
Date Made Active in Reports: 06/17/2014

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

	Data Release Frequency: Varies

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 09/27/2021
Number of Days to Update: 84	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A	Source: EDR, Inc.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A	Source: EDR, Inc.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## Public Schools

Source: National Center for Education Statistics

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06019C2110H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
FRESNO SOUTH	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	7 inches	25 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1
3	25 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: 141 Min: 42	Max: 7.3 Min: 6.1

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**Soil Map ID: 2**

Soil Component Name: SAN JOAQUIN

Soil Surface Texture: sandy clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	16 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
2	27 inches	29 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
3	29 inches	35 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
4	35 inches	59 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6.5 Min: 5.6
5	0 inches	16 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6.5 Min: 5.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**Soil Map ID: 3**

Soil Component Name: MADERA

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.1 Min: 0.01	Max: Min:
2	20 inches	33 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.1 Min: 0.01	Max: Min:
3	33 inches	40 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.1 Min: 0.01	Max: Min:

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## RADON

### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Name: PARCELS 467-04-20ST, -22ST, -23ST  
 Address: 801 H STREET  
 City,State,Zip: FRESNO, CA 93721  
 Recipient Name: Fresno Redevelopment Agency  
 Grant Type: Assessment  
 Property Number: 467-04-20ST, -22ST, -23ST  
 Parcel size: 5.5  
 Latitude: 36.7302000  
 Longitude: -119.7904000  
 HCM Label: Global Positioning Method-Unspecified Parameters  
 Map Scale: -  
 Point of Reference: Center of a Facility or Station  
 Highlights: Based on the date of construction, URS requested an asbestos and lead-based paint survey from a private subcontractor, T. Brooks and Associates of Clovis, California, for the warehouse located on parcel APN 467-04-23ST (aka 735, 739, 741 H Street). The methodology and results of the survey are presented under separate cover and entitled Asbestos Survey & Lead-Based Paint Inspection Report, Commercial Structure 735, 739, &741 H Street, Fresno, California, dated May 28, 2014. The survey concluded, in part, that 20 samples collected by Brooks for analysis included one or more s which tested positive for

MAP FINDINGS

**PARCELS 467-04-20ST, -22ST, -23ST, 801 H STREET, FRESNO, CA 93721 (Continued)**

asbestos in amounts greater than 1.0 percent. The samples testing positive included drywall taping mud and texture, drywall texture, wall paneling, 9-inch x 9-inch vinyl floor tile and associated mastic, and vibration damper. The survey concluded, in part, that the majority of testing combinations considered as part of Brooks investigation were found to contain lead in some amount. A total of 47 testing combinations on the interior surfaces and 4 exterior surfaces were found to include lead in excess of 1.0 milligrams per square centimeter (mg/cm<sup>2</sup>)(0.5), (5,000 parts per million) and would be classified as Lead-Based Paint (LBP) under state and federal regulations. Former Use: Based on a review of historical documents, parcel APN -20ST has been developed as a parking lot for commercial use since the late 1990s. Between the late 1980s and the late 1990s the parcel was vacant. Prior to the 1980s the parcel consisted of several railroad spur lines used to service lumber, paper, and produce warehouses located on parcels APN -22ST and -23ST. Parcel -22ST consisted of warehouses and commercial development until the early 1980s. The parcel was vacant in the 1980s and developed into a parking lot in the late 1990s. The warehouse currently occupying parcel APN -23ST is visible in aerial photographs back to at least 1946 and other historical documents back to at least 1885.

MAP FINDINGS

**COMMERCIAL BUILDING, 721 BROADWAY, FRESNO, CA 93721 (Continued)**

Point of Reference: Entrance Point of a Facility or Station

Highlights: Based on a review of historical documents, the subject property and adjacent parcels have been developed for commercial use in a well-established portion of downtown Fresno since back to at least 1918. Prior to 1918, the subject property was developed as a single-family residence with appurtenant structures in a commercial district of downtown Fresno back to at least 1885. Based on the age of the structure dating back to at least 1946, building materials may contain asbestos. There is also the possible presence of lead-based paint. According to the best recollection of the subject property tenant, there has never been an asbestos or lead-based paint survey performed on the subject property structure. Former Use: In 1918, the subject property parcel contained Zibbell s Auto Exchange Garage in the general configuration as the present day structure. In 1948, the subject property parcel contained a wholesale beer distributorship, apparently part of the Richter Bottling Company located to the southeast. In 1950, the subject property parcel contained an auto brake shop. The subject property was identified with several different auto parts stores up to 2008, when the Fresno RDA took possession and the current tenant, Pool Tables R Us, occupied the site.

 Past Use: Multistory Not Reported  
 Property Description: In 1918, the subject property parcel contained Zibbell s Auto Exchange Garage in the general configuration as the present day structure. In 1948, the subject property parcel contained a wholesale beer distributorship, apparently part of the Richter Bottling Company located to the southeast. In 1950, the subject property parcel contained an auto brake shop. The subject property was identified with several different auto parts stores up to 2008, when the Fresno RDA took possession and the current tenant, Pool Tables R Us, occupied the site.

MAP FINDINGS

**AMERICAN & FOREIGN PROPERTY, 603 BROADWAY, FRESNO, CA 93721 (Continued)**

HCM Label:	Address Matching-House Number
Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Subsurface soil contamination from benzene, xylene, and 2-methylnaphthalene has been identified at one location on the property parcel at concentrations greater than the site screening levels and ESL benchmarks. The contamination is most likely associated with historical leaking of a dispenser pipe. Contamination was not found at any other sampled subsurface location. The identified contamination is not believed to be a threat to groundwater based upon the estimated quantity of soil affected, the contaminant concentrations, and depth to groundwater. The identified contamination is not likely to pose any risk to human health. Former Use: Property is an automotive repair facility. Property has operated as a gas station/auto care since 1937. All USTs were removed in 2014.

Map Scale: -

Point of Reference: Center of a Facility or Station

Highlights: The subject property is a commercial parking lot with no significant improvements other than a guard shack, asphalt pavement, parking stall stripping, parking meters, and several lighting fixtures with a chain-link fence along the southwest side. Former Use: Based on review of historical documents, the subject property appears to have been located in an area of downtown Fresno urban development dating back to 1885. The first developments occurred in the forms of private residences in about 1888. The subject property was occupied by single-family residences and boarding houses with stables through the early 1900s giving way to retail and commercial development during the mid-1900s. By the mid-1960s, all the structures had been removed and the site was developed as a paved parking facility similar to present-day configuration. This assessment identified no Recognized Environmental Conditions (RECs) in connection with the subject property. For the reasons discussed in Section 8.2 of the ESA, it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the New York Hatters Hat Cleaners and Blockers, or Victor Kuljian, clothes cleaner; and additionally it is URS opinion that there is a low likelihood that significant environmental liability exists regulated to the presence of lead-based paint on the subject property parcel as a result of sloughing from neighboring site structure and no further investigations appear warranted.
